

Request for Information (RFI)

Regulatory Compliance Automation Platform

The Government is conducting market research to identify and assess commercially available alternatives to RegScale in support of Platform One (P1) mission requirements.

This Request for Information (RFI) is issued for market research and acquisition planning purposes to evaluate industry capabilities and available solutions that provide Governance, Risk, and Compliance (GRC) automation, continuous compliance monitoring, security control management, risk assessment tracking, audit readiness, and authorization support within a Government security-compliant environment.

The Government seeks to identify solutions capable of supporting enterprise compliance operations, Risk Management Framework (RMF) activities, continuous Authority to Operate (cATO) sustainment, control inheritance management, evidence collection automation, policy mapping, and security documentation management across Platform One's DevSecOps ecosystem.

Responses to this RFI will assist the Government in identifying qualified sources, evaluating alternative capabilities, and informing future acquisition strategy decisions. This RFI is for informational purposes only and does not constitute a solicitation, request for proposal, or a commitment by the Government to award a contract.

The Government encourages responses from all capable vendors and seeks to promote maximum practicable competition while assessing solutions that meet or exceed the operational, technical, and security requirements necessary to support Platform One mission execution.

Request for Information (RFI)

Regulatory Compliance Automation Platform

Vendor Response Questions

- 1 Describe your Continuous Controls Monitoring (CCM) capability.
- 2 How does your platform automate evidence collection for compliance artifacts?
- 3 What regulatory frameworks are natively supported (NIST 800-53, RMF, FedRAMP, CMMC, STIG)?
- 4 Describe your policy-as-code capabilities.
- 5 Explain audit trail retention and immutable logging capabilities.
- 6 Describe native integrations with GitLab, Jira, Confluence, Kubernetes, AWS GovCloud, and ServiceNow.
- 7 How does your solution support Continuous ATO (cATO)?
- 8 Describe compliance drift detection and automated remediation workflows.
- 9 Explain your role-based access control (RBAC) model and SSO/SAML support.
- 10 Describe your implementation timeline and migration support process.
- 11 Provide your support escalation process.
- 12 Confirm ability to deliver licenses within 5 business days after award.
- 13 Provide annual subscription pricing and any implementation/service accelerator pricing.
- 14 Provide examples of Federal or DoD customers using your solution.
- 15 Explain data ownership, storage, and retention controls for on-prem environments.
