

Statement of Work and Specifications for a Microwave Digestion System

The digester shall have enhanced corrosion resistance to withstand regular exposure to hydrochloric acid and aqua regia.

The digester shall have automated acid removal.

The digester shall utilize a pressure digestion cavity instead of rotor-based system.

The digester shall reach temperatures up to 300C and up to 199 bar pressure.

The digester shall contain an integrated cooling system.

The delivery time shall be within 12 weeks of after vendor's receipt of purchase order.
