

Performance Work Statement (PWS)
Drone Training
17 Mar 26

1.0 General Scope

The contractor shall provide all personnel, equipment, materials, and support necessary to deliver a comprehensive Group 2 Unmanned Aerial System (UAS) target training service for the 301st Rescue Squadron (RQS) at Patrick Space Force Base (SFB), FL. The purpose of this service is to instruct, practice, and familiarize HH-60W aircrews with tactics for countering small, high-speed aerial threats.

2.0 Specific Tasks

The contractor shall:

2.1 Provide UAS Targets: Provide a total of four (4) Group 2 UAS targets for kinetic engagement and destruction. These targets shall, at a minimum, meet the following performance characteristics:

Airspeed: 100-120 Knots Indicated Airspeed (KIAS)

Altitude: Operation below 500 feet

Endurance: Minimum 3 hours of flight time

Control: Capable of controlled flight 20-25 NM from shore in assigned warning areas over the Atlantic ocean.

2.2 Provide Operational Support: Provide a sufficient number of qualified personnel to transport, assemble, launch, operate, and recover all UAS assets and associated ground support equipment.

2.3 Conduct Training Events: Execute four (4) total training days, consisting of:

Two (2) days focused on "search and intercept" training sorties.

Two (2) days focused on "intercept and kinetic engagement" sorties, culminating in the destruction of the four UAS targets.

2.4 Coordination: Designate a single point of contact (POC) to coordinate all operational and scheduling matters with the government's technical representative. The contractor POC shall attend all pre-mission briefings as required.

2.5 Housekeeping & Debris: The contractor is responsible for removing all company-generated waste and equipment from government-provided facilities daily. As training operations will be conducted 12-25 nm offshore, no debris recovery from destroyed targets is required.

3.0 Government Furnished Information/Property (GFI/P)

3.1 Installation Access: The Government will provide necessary and timely base access credentials for all pre-approved contractor personnel and vehicles.

3.2 Facilities: The Government will provide a suitable briefing space for pre-mission coordination with flight crews. Access to hangar space is not guaranteed but may be provided on a space-available basis.

3.3 Airspace: The Government is responsible for scheduling and deconflicting the necessary training airspace.

4.0 Place of Performance

Launch, recovery, and ground support operations will be conducted at Patrick SFB, FL. Air

training operations will be conducted in the designated airspace 12-25 nm east of Patrick SFB over the Atlantic Ocean.

5.0 Period of Performance

The contractor shall complete all required services during the period of 22-26 June 2026. The contractor must demonstrate flexibility to adjust specific event days within this period to accommodate weather or range scheduling issues.

6.0 Base Access Requirements

The contractor shall comply with all installation access, security, and identification requirements in effect at Patrick Space Force Base. Contractor personnel, vehicles, and equipment shall obtain required passes and clearances prior to entering the installation. The contractor is responsible for ensuring all employees possess valid identification and meet base entry requirements. Delays resulting from failure to comply with base access procedures shall be the contractor's responsibility and shall not result in additional cost to the Government.
