

General Information

- Date of Assessment
- Assessor's Name and Title
- Location being assessed, Building, Area
- Equipment Names/Types
- Equipment Operational Status (Operational/Standby/Out of Service)

Boiler Plant

- **Safety Devices**
 - Review all safety devices and note if any deviations from the manual or last inspection have occurred.
- **Boiler Exterior and Piping:**
 - Check for visible damage, including dents, rust, corrosion, or leaks.
 - Inspect insulation for signs of wear or degradation.
 - Ensure all safety signs and labels are intact and legible.
- **Burners and Combustion:**
 - Review operators log for any running issues and make recommendations on repair or path to resolve.
 - Ensure proper alignment and operation of burners.
 - Check combustion efficiency and emission levels.

Fuel System

- Inspect fuel storage tanks for integrity and leaks.
- Check fuel supply lines for damage or signs of corrosion.
- Verify that fuel pumps and filters are functioning correctly.

Control Systems and Instrumentation

- Verify the operational status of control panels and automation systems.

- Check the functionality of safety shutdown devices and alarms. Review last safety device test report and provide feedback on how to resolve any remaining deficiencies.
- Ensure all control system wiring and connections are secure.

Feedwater System

- **Feedwater Pumps:**
 - Check for unusual noise or vibrations.
 - Inspect for leaks and ensure proper lubrication.
 - Verify pump performance and output pressures.

Condensate System

- Check condensate return pumps and tanks for leaks or corrosion.
- Inspect steam traps for proper operation.
- Assess the performance of heat exchangers.

Electrical Systems and Motors

- Inspect electrical panels, wiring, and connections for integrity.
- Check the condition and operation of motors and starters.
- Verify the functionality of emergency power systems.

Safety and Regulatory Compliance

- Ensure all safety devices are in place and operational.
- Verify compliance with relevant codes and standards.
- Review and update safety procedures and documentation.
