43 } Took out of program but
63 } Sensors still on the wall.
Alarm will "Alert"

Motion Alarms are a box shaped thicker rectangle.
Glass Breaker Motions are white and flatter rectangle boxes.
360 Motion alarms are round and attached to ceiling
Upstairs Sliding doors do not have any contacts and do NOT connect to the Alarm System.
"Receiver" for glass breakers is place on wall above Shared Computer in Interp Gallery. It has a couple antenna sticking out to the left.
Bookstore door does not have any contacts and does NOT appear to be connected to the Alarm System

Box #1 located at ground level at northwest corner of maint bldg where wiring comes out of the inside
Box #2 located in grassy area at the driveway into USFS parking lot east after leaving vc parking lot
Box #3 is located at south end of the east parking spaces where employees park.

Cameras at the USFS Maint Barn on the north and south end and the other 2 cameras mounted on the pole on east side of USFS parking lot. 4" Conduit trenched in from the 2 cameras on pole to the south edge of maint bldg to the northwest corner of the bldg. The 2 cameras on the north/south corners of bldg and the 2 pole cameras are all tied into a wiring panel in the northwest corner of the maint bldg in the little room where the ice machine is. From there the camera wires are in 4" conduit trenched across parking lot area to the power pole just north of the Sod House. From that approximate area it is trenched to the east back wall of the USFS open area and goes into a wire chase basket thru the ceiling into the communications room. There are 3 "Pull boxes" from the maint bldg to the power pole. The Pull boxes are in the ground with green rectangle plastic lids on the surface.
