

Questions and Answers RFQ 477155

1 Identification and Marking.

-Can the parts be marked with an engraving tool as long as they meet the **character height and MIL-STD-130 requirements?**

Yes. As long as the markings meet the requirement, engraving is acceptable.

2 STEP Files

- Are there STEP Files available along with the part prints?

Yes, STEP files are available.

You must send a separate request for the STEP files via email to Lgonzales@bnl.gov by COB 5/11/26 with RFQ 477155 in the subject line.

3 Plating

- For the aluminum components that are to be plated, I notice in the BOM of each print it lists iridite and alodine. Does this mean the chromate can be replaced with either iridite or alodine?

"Iridite" and "Alodine" are trade names for chromate conversion coatings and are acceptable, provided that the process used meets the requirements of MIL-DTL-5541 Class 3 (clear, RoHS compliant).

In short, you may use Iridite, Alodine, or an equivalent process, as long as it complies with the specified standard and class.
