

Decision for Sole Source Award IAW RFO 12.102(a)

Under SAT

Acquisition Plan Action ID: 36C259-26-AP-2357

2237: 442-26-2-1075-0010

JOFOC Tracking Number: FY26 – NCO 19 - 877

1. This will be a firm-fixed price purchase order for access to the Micromedex database for the Cheyenne VA. The period of performance will be a base year with four one-year option periods. The estimated value of the contract is [REDACTED] for all five years.
2. Micromedex software and cloud services have been in use at the Cheyenne VA Medical Center for nearly a decade and is integrated into the Computerized Patient Record System (CPRS). It is the standard pharmaceutical decision support and Toxicology Management system used by most VA Health Care Systems. No other vendor provides such vast and comprehensive tools for clinicians to access hundreds of thousands of drugs and medication information in fields of Medication Safety, Drug Interactions, Alternative Medicine and Therapies, IV compatibility for Medication Safety, Formulary Solutions, Pediatric and Neonatal Evidence for Patient Safety, and Global Drug Information. This is also the only source that provides cloud service and IBM Watson technology to avoid treatment delays and adverse outcomes in emergency situations by providing healthcare professionals with immediate access to evidence-based information.

Pepid was consulted regarding ability to service the same product. It was concluded that integrating a new system into the VA would be more costly than continuing with the same program we currently have. They do offer similar products, but the integration would be more costly and not fiscally warranted at this time. Cloud service is not available on Pepid only updated links that would need to be accessed.

Lexicomp was consulted for a quote. They do not have products that offer nor have similar products that Micromedex has to offer. They also are unable to support the IBM Watson Technology that is currently in place at the Cheyenne VA. They opted not to give a quote due to these two reasons. Switching to a service that does not offer the same services currently in use will cause patient safety concerns, as well as, delay in care of the patient. It will also cause distress to clinicians without the resources available at point of contact, thus leading to possible errors and possible detrimental effects.

3. This decision supports the brand name decision for Micromedex as it is in the best interest of the Government in accordance with RFO 12.102(a).
