

VMS UNITS STATEMENT OF NEED

BACKGROUND / SCOPE / MISSION: Vessel Monitoring System (VMS) transceiver hardware for OLE PID.

The Pacific Islands Division (PID) of the Office of Law Enforcement (OLE), National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC), is a government agency charged with the mission of enforcing laws, regulations and conservation measures supporting stewardship for living marine resources.

A critical component of managing this task is to conduct reasonable, regular, sustainable, life-cycle replacement of at-sea-deployed VMS hardware. The standard for replacement of such at-sea electronics gear is generally 3-5 years (varying depending upon conditions of use, hardware component durability, and other factors). In PID's life-cycle management plan, we have opted for the most fiscally conservative end of this range (5 years, or approximately 20% of inventory each year). This rate currently estimates an annual procurement of thirty (30) units up to thirty-five (35) units in each option period.

INTENDED USE / PURPOSE: The PID provides administrative and technical support to manage and operate the Pacific region portion of the national VMS used by the US Government to monitor commercial fishing and other vessels required by Federal Regulations for the purpose of enforcement. Under regulations at CFR Title 50, Subpart A, Section 665.19, OLE is required to procure, install, maintain, repair, and replace VMS transceivers for the Hawaii and American Samoa Longline Limited Entry permit holders that are NMFS type-approved, and transmit positions to the NOAA OLE VMS. The vast majority of those permit holders are also required, under regulations at CFR Title 50, Subpart O, Section 300.219 (b), (c), and (c)(iii), to transmit their positions by VMS to the West Coast Pacific Center (WCPFC) VMS. Most of those permit holders are also required, under mandatory federal regulations at CFR Title 50, Subpart A, Section 665.14 (b), (1), (ii), (A), to transmit their electronic logbook data by VMS daily to the PIFSC.

SPECIAL REQUIREMENTS (ESSENTIAL SALIENT FEATURES):

To be considered for this procurement, the VMS unit model must be listed on the subset of units listed on both the "U.S. Fisheries of the Western and Central Pacific Islands" sub-section of the US list at <https://www.fisheries.noaa.gov/national/enforcement/noaa-fisheries-type-approved-vms-units>, and the WCPFC list at <https://www.wcpfc.int/doc/wcpfc-approved-list-current>). The VMS unit model must also be currently approved by the Pacific Islands Fisheries Science Center (PIFSC)) for transmission of electronic logbook (e-logbook) data under the mandatory federal requirement for the Hawaii and American Samoa longline fisheries. The PIFSC point of contact is Ashley Tomita, ashley.tomita@noaa.gov.

In order to meet the full range of federal permits and associated VMS requirements in this region, OLE PID government-procured VMS units must, with few exceptions, successfully transmit hourly position reports not only to OLE's system, but also to the WCPFC VMS (to be compliant with the WCPFC Implementation Act), and must successfully transmit daily e-logbook data reports to PIFSC. The contract requires VMS units that are type approved by NMFS AND WCPFC AND PIFSC, with proven capability to transmit required data via the

VMS unit to each system (NMFS, WCPFC, and PIFSC), to include transceiver unit, antenna(s), antenna cable (minimum 45 feet long), water sealant, power cable (minimum 15 feet long)/converter/conditioner, mounting brackets, and any other accessories necessary for reliable hourly position reporting.

The VMS units must be capable of allowing input of, and successfully communicating to the VMS unit, PIFSC-approved / managed electronic forms data (on an Android OS tablet) that meets PIFSC e-logbook requirements.

Quantity: The Government estimates 30 units each year for 5 years of the Blanket Purchase Agreement (BPA) (assuming each option is exercised)

Optional: 5 extra units may be purchased each year, beginning the first option year of the BPA

Period of Performance (PoP):

Base Year: 7/1/2026 – 6/30/2027

Option Year 1 7/1/2027 – 6/30/2028

Option Year 2 7/1/2028 – 6/30/2029

Option Year 3 7/1/2029 – 6/30/2030

Option Year 4 7/1/2030 – 6/30/2031

VMS units will be ordered on separate Call Orders during the respective period of performance of the BPA.

DELIVERY LOCATION:

OLE PID or its local designee at:

NOAA-IRC/NMFS/OLE
1845 Wasp Boulevard, Building 176
Honolulu, Hawaii 96818

Shipping and Insurance charges (pre-pay and add to invoice supported by freight bill) to Honolulu.

DELIVERY SCHEDULE:

Within six (6) calendar weeks of the first Call Order awarded for the base year.

For each option year: delivery within six weeks of issuing each Call Order(s).

Anticipated ordering schedule:

1. Quantity: 30 units: Base Year
2. Quantity: 30 units: Option Year 1

- Quantity: Optional 5 extra units: Option Year 1
- 3. Quantity: 30 units: Option Year 2
 - Quantity: Optional 5 extra units: Option Year 2
- 4. Quantity: 30 units: Option Year 3
 - Quantity: Optional 5 extra units: Option Year 3
- 5. Quantity: 30 units: Option Year 4
 - Quantity: Optional 5 extra units: Option Year 4
