

Performance Work Statement
Electronic Flight Bag (EFB) Sanitization
McConnell AFB, Kansas

1.0 Overview

Currently, Air Mobility Command uses Apple iPads as their Electronic Flight Bag (EFB) for all aircrew, with limited usage, on real-world and exercise 801x missions. In order to allow usage of EFBs in the cockpit and cargo area, as outlined in AMCI 11-270 paragraph 3.13 and DAFI 21-101_AMCSUP_AMCGM202501, paragraph 1.7.3.12, we request to have thirty (30) EFBs be sanitized to meet the criteria listed below in the scope of work. By removing these capabilities, the aircrews maintain safety of flight with full access to publications in the cockpit, while ensuring we avoid classified spillage, classified messaging incidents, malicious logic, or a COMSEC incident involving an EFB.

2.0 Scope of Work

The contractor shall provide all necessary personnel, labor, materials, and expertise to perform the hardware modifications on thirty (30) Government-Furnished EFBs. The scope of work includes the physical and permanent removal of the following components from each EFB:

- Bluetooth module
- Wi-Fi module
- Cellular module (if applicable)
- All front and rear-facing cameras
- All microphones
- All recording capabilities

The removal of these components must be done in a manner that does not damage the remaining functionality of the iPad's screen, processor, and power components.

3.0 Period of Performance

The period of performance for this contract shall be 30 days from the date of contract award.

4.0 Place of Performance

All work shall be performed at the contractor's facility.

5.0 Government-Furnished Equipment (GFE)

The Government will provide the following to the contractor:

- Thirty (30) 11-inch iPad Air M3 model. Manufacturer Part Number MCA14LL/A

6.0 Deliverables

The contractor shall deliver the following at the conclusion of the period of performance:

- Thirty (30) modified EFBs with the components listed in Section 2.0 physically removed.
- An individual report for each modified iPad serial number will be provided detailing the work performed and certifying the removal of the specified components.

7.0 Quality Control and Acceptance Criteria

The Government will perform quality assurance checks on all modified iPads. Acceptance of the deliverables will be based on the following criteria:

- Physical Inspection: A visual inspection will be conducted to ensure the specified components have been physically removed.
- Functional Testing: Each iPad will be powered on to verify that the core functions (e.g., operating system boot, screen display, and response to touch) are still operational.
- Connectivity and Sensor Testing: Attempts will be made to connect to Bluetooth, Wi-Fi, and cellular networks. The camera and microphone applications will be tested to confirm they are non-functional due to the absence of hardware.
- Report Verification: The reports provided for each device will be reviewed for accuracy and completeness.

8.0 Risks

It is important to note the inherent risks associated with the requested hardware modifications:

- Voiding of Warranty: The physical opening and modification of the iPads will void any existing manufacturer's warranty.
- Risk of Damage: There is a significant risk of damage to the iPads during the component removal process. The contractor will be liable for any damage rendering the devices unusable.
- Security Implications: While the intent is to enhance security by removing components, any improper modification could potentially compromise the device's built-in security features, such as the Secure Enclave

This Performance Work Statement is intended to provide a clear and comprehensive overview of the required work. The contractor is expected to have expertise in electronics and hardware modification to perform these tasks successfully.
