

USNCC Consortium for Integrated Academic Solutions

Pricing Template Instruction Sheet

The pricing template lists what programs a Partnership Institution (PI) may implement under the CIAS award. All programs that are listed on the pricing template in Column C (Programs, are broken down in to 4 categories:

- 1) Current Programs (identified non-italic such as Military Studies) are programs currently implemented with a PI and currently have students enrolled.
- 2) All programs listed in *italics*, such as *FY27 (Additive/Advance Manufacturing)* are programs in the current pipeline with the USNCC.
- 3) All programs that are listed in the form [Insert Program] – FY27 are lines where a PI may add a program from Attachment IV – USNCC Academic Program Classification.
- 4) Program Management and IT/Data Support – a fully burdened rate charged to supplement labor for the award per fiscal year. Contract awardees, prior to being issued a task order, will have the opportunity to quote and utilize the fully burdened rate established in the respective IDIQ contract to determine a total amount necessary in support of a specific degree program.

The PI is not required to price all programs they are submitting for consideration, but to price what programs they can readily support at the beginning of the award. This requires the PI to place a value in 5 columns for each program:

- 1) Tuition – cost per credit hour
- 2) Instructional Materials – Average cost of materials for this program per year
- 3) Term Fees – Average cost of fees per term per year
- 4) Annual Fees – Average cost of fees that are charged per year
- 5) Graduation Fees – Average cost of graduation fees
- 6) Credits/Course – Adjust as necessary per the terms of your institution

Note: Programs that are not included in the price quote but are be considered for implementation at a future date, will require a price review to determine fair and reasonable prior to program implementation.

These values need to be carried over to all follow-on CLINs, i.e. if a PI inputs values for Military Studies in the Base Year (CLIN 0001), then those values will need to be input on CLIN 0002 through the additional 6-month period, a total of 5 additional tabs. In each follow-on tab, the PI may consider economic adjusts, such as inflation, to the costs.

PIs also have the option to input values for Program Management and IT/Data Support.

Pricing Template Instruction Sheet Example

Program	Course Seats	Tuition	Instructional Materials	Term Fees	Annual Fees	Graduation Fees
Military Studies	1250	100.00	375.00	150.00	25.00	50.00
FY27 <i>(Mechatronics)</i>	500	150.00	375.00	500.00	25.00	50.00
Biotechnology*	375	125.00	425.00	375.00	25.00	50.00
Project Management						
IT/Data Support						
TOTAL						

*Biotechnology was input on a [Insert Program] FY27 line.

This is an example of a Partnership Institution whose response includes implementing three programs (Military Studies, Mechatronics, and Biotechnology) in the Base Year (FY27) and included a fee for Project Management and a fee for IT/Data Support. As stated in Amendment 0002, “each successful Offeror will receive an Indefinite Delivery/Indefinite Quantity (IDIQ) contract with a preestablished maximum ceiling of \$342,000,000. For source selection, best-value tradeoff, and price analysis purposes the Government will consider the offeror’s credit hour rates applicable fees, materials, and fully burdened rates for the program management and IT Data Support CLINs. This approach ensures a fair evaluation regardless of the number of programs an offeror provides.”
