

Task Order 2026-D-025-002
Task Order Proposal Request (TOPR)
Statement of Work (SOW)
IT Research and Professional Support

A. SCOPE

The United States Senate Office of the Sergeant at Arms (SAA) seeks to procure a comprehensive Information Technology (IT) Research and Support License to support enterprise IT strategy, architecture, security, emerging technologies, and organizational capabilities across the agency. This effort will provide access to authoritative research, benchmarking data, analyst advisory services, and practical guidance related to technology strategy, solution implementation, vendor evaluation, and enterprise service delivery.

The license will support SAA Chief Information Office (CIO) personnel and stakeholders by enabling informed strategic and tactical planning, technology modernization initiatives, risk mitigation, and operational effectiveness. Services obtained under this effort are intended to supplement internal capabilities by providing independent, unbiased, executive-level research and advisory support focused on technology decision-making.

The period of performance for this effort is one-year.

A.1 Background

The SAA CIO requires timely access to independent IT research and advisory services to effectively plan, deploy, and govern technology investments in a rapidly evolving environment. As enterprise IT initiatives expand in scope and complexity including cloud adoption, cybersecurity, artificial intelligence, and customer experience access to industry frameworks, peer benchmarking, and implementation best practices is essential to sound decision-making.

CIO personnel and IT stakeholders require executive-level research, role-based tools, and direct access to subject matter experts to address challenges related to enterprise and cloud architecture, security, organizational change management, service delivery, and emerging technologies. Obtaining objective research and advisory services will enable the Senate community to align technology capabilities with mission priorities while improving consistency, efficiency, and service outcomes.

B. TASKS AND DELIVERABLES

B.1 Tasks

The Contractor shall provide IT-related research, benchmarking, and advisory services that support strategic and tactical planning, solution evaluation, and operational efficiency. Support shall include, but not be limited to, the following:

- a) Strategic Planning: Provide insights into industry trends for technologies, hardware and software providers, technology and process frameworks, and organizational capabilities to enable strategic planning for emerging IT and business challenges, including organizational change management (OCM).

Task Order Proposal Request (TOPR)
Statement of Work (SOW)
IT Research and Professional Support

- b) Tactical Planning: Provide best practices and implementation guidance for deploying new technologies, frameworks, and organizational capabilities, focusing on the practical “how-to” based on customer experiences. Deliver research, toolkits, and implementation guides tailored to enterprise IT staff.
- c) Vendor Reviews: Provide objective vendor assessments addressing financial stability, market position, strategic direction, and comparative strengths and weaknesses relative to competitors.
- d) Solution Assessments: Provide detailed evaluations of vendors’ product and solution capabilities, including strengths, weaknesses, and fit for business requirements to support initial solution assessments.
- e) Business Skills Analysis: Provide research on competencies and activities that support business outcomes such as customer service and experience, internal communications, marketing, risk management, budget planning and forecasting, and project management, including guidance for developing these skills.
- f) Expert Analysis and Advisory: Provide access to subject matter experts who can integrate related research, respond to inquiries, and challenge assumptions to improve SAA understanding across knowledge domains.
- g) Peer Discussions: Facilitate peer discussions and forums that enable SAA personnel to engage with other IT leaders to exchange experiences, lessons learned, and best practices.
- h) Process Frameworks: Analyze and recommend plans, templates, and frameworks to standardize service delivery and improve consistency and effectiveness for SAA customers.
- i) Enterprise and Cloud Architecture: Analyze enterprise and cloud architecture frameworks and assess the CIO’s current environment and strategic direction. Recommend a common architecture supported by templates, policy guidance, and migration strategies to improve efficiency and effectiveness.
- j) Customer Experience Frameworks: Analyze customer experience frameworks and supporting policies and processes. Recommend tools and methodologies to deploy modern, responsive, and innovative services that meet evolving Senate business needs.
- k) Security: Review and discuss security best practices, tools, and skills required to build and operate a mature, high-performing security organization.
- l) Artificial Intelligence (AI): Provide expertise and guidance on AI strategy, governance, security, implementation approaches, and emerging trends.
- m) General IT Topics: Provide analysis and advisory support on technologies, methodologies, vendors, and strategies to support project life cycles, inform business cases, enhance executive awareness, and mitigate organizational risk.
- n) Provide technical and management services to assess the current state of the Senate’s IT and operational environment, define a desired future state, and recommend a clear path forward to achieve Senate objectives.

B.2 Deliverables

Deliverables under this task order shall include, but are not limited to:

- a) Continuous access to a secure, web-based research and advisory platform throughout the period of performance;
- b) Access to published research reports, benchmarking tools, templates, frameworks, and analytical resources;
- c) Scheduled analyst inquiry sessions, expert consultations, and advisory engagements as defined by the license;
- d) Access to live and recorded webinars, briefings, events, and facilitated peer forums; and
- e) Periodic updates to research content reflecting current industry standards, market conditions, and best federal practices.

B.3 Coordination

The SAA will coordinate and facilitate meetings, inquiry sessions, briefings, and peer engagements with the Contractor, as required, to accomplish the objectives of this effort.

B.4 Government-Furnished Support

The SAA will provide access to approved on-site or remote connections, as necessary, to enable authorized users to access licensed research and advisory services.

C. REQUIREMENTS

C.1 General Requirements

The Contractor shall provide a commercial, subscription-based IT Research and Support License that supports multiple authorized SAA users and roles with user quantities to be determined and adjusted by the Government as needed not to exceed 20 license holders. All research and advisory services shall be independent, unbiased, vendor neutral, relevant to public-sector and legislative branch environments, current, and accessible via a secure web-based platform.

C.2 Service Requirements

The Contractor shall provide uninterrupted access to licensed services, notify the Senate of significant updates or changes, and provide basic user support for platform access and use.

C.3 Compliance Requirements

All services shall comply with SAA policies and procedures (Attachments H-1, H-2, and H-3) and align with federal best practices for financial management, information technology, security, and data governance.

C.3.1 Key and Other Personnel

C.3.1.1 The Contracting Officer can designate key personnel under the Contract. Key personnel may not be changed or reassigned during the first ninety (90) days of performance on this Contract without the prior written approval of the Senate Contracting Officer, which shall not be unreasonably withheld.

C.3.1.2 During the period of performance of this Contract, key personnel substitutions shall not be permitted unless such substitutions are necessitated by an individual's sudden illness, personal hardship, death, or termination of employment or requested by the Contracting Officer or COR. In any of these events, the Contractor shall promptly notify the Contracting Officer and provide the information required in paragraph C.3.1.3.

C.3.1.3 All proposed substitutions must have qualifications that are equal to or higher than the qualifications of the person to be replaced. The Contracting Officer or designee will evaluate such request and notify the Contractor of the Senate's approval or disapproval thereof on substitutions within twenty (20) business days.

C.3.1.4 The Contracting Officer reserves the right to approve or disapprove the assignments of all personnel assigned to the performance of this Contract.

D. Pricing

The Contractor shall submit a Task Order price proposal in accordance with Section B – Supplies or Services and Prices/Costs of the base FEDLINK contract. Pricing shall be proposed at the appropriate Contract Line-Item Number (CLIN) level and shall be consistent with the Contractor's awarded pricing schedule and applicable pricing provisions of the contract. Discounts from IDIQ pricing are strongly encouraged.

E. Technical

The Contractor shall submit a Task Order technical proposal no more than ten (10) pages in accordance with Section C – Description/Specifications/Statement of Work (SOW) of the FEDLINK contract. The technical proposal shall demonstrate the Contractor's capability to fulfill the technical requirements as described in this Solicitation.

F. Task Order Evaluation

The SAA will evaluate the Contractor's Task Order proposal in accordance with the ordering procedures of the FEDLINK contract. Evaluation shall consider technical capability and price to determine overall best value to the SAA.

This is a best-value, competitive source selection conducted in accordance with the FEDLINK contract. The best value tradeoff analysis will be between technical capability and price. Technical capability is considered more important than price. The importance of price could become greater where vendors' technical approaches are evaluated as more equal.
