

**SINGLE SOURCE DETERMINATION USING
SIMPLIFIED ACQUISITION PROCEDURES (SAP)
FOR AN ACTION NOT EXCEEDING THE SIMPLIFIED ACQUISITION THRESHOLD**

1. **Agency and contracting activity.** Department of Commerce, NOAA Acquisition and Grants Office (AGO), National Oceanic Atmospheric Administration (NOAA), National Marine Fisheries Service (NMFS), Southwest Fisheries Science Center (SWFSC), Information Technology Services Division (ITSD).

2. **Description of services required to meet agency needs (including the estimated value).** The Southwest Fisheries Science Center (SWFSC) requires service and support for our REES Scientific Centron environmental monitoring system located at our La Jolla lab:

- Annual calibration and validation service for the Centron system, manufactured by REES Scientific, and
- A 12-month hardware and software service and support agreement to include on-site service and component replacement in the event that the system fails to receive software upgrades. Non-personnel service contract seeking a vendor that can perform routine maintenance and upgrades (hardware/software/firmware) to the existing Rees Scientific automated temperature monitoring and notification infrastructure at the SWFSC.

3. **Identification of the single source to be solicited.**

Rees Scientific
1007 Whitehead Road Ext
Trenton, NJ 08638

4. **Supporting rationale.** Only one source or brand name is reasonably available as detailed below:

Other - Only one source is capable -

Rees Scientific Corp. is the original equipment manufacturer and the only source provider of the monitoring systems with certified and experience personnel who can perform the annual validation and maintain the equipment in a fully functional condition in accordance with original equipment manufacturer (OEM) specifications. The Centron Environmental Monitoring System utilizes software and hardware that are proprietary and trade secret to Rees Scientific Corp. The current SWFSC automated temperature monitoring system comprises 46 monitoring points on a single server node. The system (hardware, software, and firmware) is a Rees Scientific Centron system (<https://www.reesscientific.com/>). The existing system cannot be replaced without undue financial burden and upgrades are needed to maintain consistent and accurate temperature monitoring. This is a logical follow on to contracts 1305L321PNFFR0015, 1333LF20PNFFR0097 and WE133F15NC0838.

5. Market Research.

REES Scientific is the only vendor authorized to service and validate the Centron monitoring system. The system hardware and software is propriety and current warranties would be void, if services are performed by non-authorized service providers.

6. Technical/Requirements Representative Certification

I certify that this requirement constitutes the Government's minimum needs and the supporting data provided herein is accurate and complete to the best of my knowledge and belief.

7. Determination

I hereby determine that the circumstances of this action deem only one source is reasonably available. This determination is accurate and complete to the best of my knowledge and belief.
