

Specifications
FY26 BPA Purchase Order for Respiratory Therapy Supplies

Item:	Item Description:	Specification:	Justification:
	Sterile Water	• 100% Sterile Water • 1,000 mL and 2,000 mL • Packaged for single-use	Inhalation therapy via nebulizer or humidifier for high flow humidity for critical care patients
	BiPAP (Bilevel Positive Airway Pressure) Circuit	• Packaged in sterile bag/container • Disposable, single-use • Soft and Flexible Tube • Adult, Holding Arm • 22 mm x 22 mm Adapter, 22mm ID x 6 ft	Delivery of non-invasive ventilation to support breathing for critical care patients
	Oscillatory PEP (Positive Expiratory Pressure) Therapy System w/o a separate T-Piece	• Packaged in sterile bag/container - Reusable • Durable	Critical care lung expansion device and removal of pulmonary secretions
	Oscillatory Positive Expiratory Pressure Therapy System with T-Piece	• Packaged in sterile bag/container - Reusable • Durable • Includes a T-Piece Adapter	Critical care lung expansion device and removal of pulmonary secretions while delivering aerosolized medication
	Filt-a-Therm 99.999%+ Filtration Efficiency HMEF (Heat and Moisture Exchanging Filter)	• Packaged in sterile bag/container - Reusable • Durable	Filter for heat and moisture exchange and remove contaminants, bacteria and viruses for mechanical ventilated patients
	Filt-a-Therm 99.999%+ Filtration Efficiency HMEF (Heat and Moisture Exchanging Filter) with Luer Port	• Packaged in sterile bag/container - Reusable • Durable	Filter for heat and moisture exchange and remove contaminants, bacteria and viruses for mechanical ventilated patients and medication delivery
	Equipment Cover	• Clear Plastic, thickness 1-2 mils • Size: 28 x 22 x 56 • Disposable, single use	Cover and Protects equipment from contaminants and bacteria

	Patient Circuit without PEEP (Positive End-Expiratory Pressure)	• 6 ft, 1.8m x 22mm Inspiratory Limb, wye • 61cm x 22mm Expiratory Limb, LTV • Packaged in sterile bag/container for single use • Disposable ventilator circuit - single use	Critical care for patients on a ventilator to delivery air/oxygen and remove exhaled gases
	Corrugated Tubing for Volume Ventilator Circuit	• 6 ft, segmented for customized length • Soft and Flexible plastic tubing • Packaged in sterile bag/container • Disposable Tubing for single use	Delivery of aerosol therapy for critical care patients on ventilator
	Closed Ventilation Suction System	• Packaged in sterile bag/container • Disposable - Single use	Clear secretions for critical patients on ventilator
	Small - AF541 Mask, EE (Entrainment Elbow) Leak 2, Capstrap	• Size: Small • Capstrap Headgear, Over the Nose Cushion • EE (Entrainment Elbow) Leak 2 Design • Packaged in sterile bag/container • Disposable - single use	Non-invasive ventilation mask for critical patient care with single-limb circuits
	Medium - AF541 Mask EE (Entrainment Elbow) Leak 2, Capstrap	• Size: Medium • Capstrap Headgear, Over the Nose Cushion • EE (Entrainment Elbow) Leak 2 Design • Packaged in sterile bag/container • Disposable - single use	Non-invasive ventilation mask for critical patient care with single-limb circuits
	Small - AF541 Mask SE (Standard Elbow), Capstrap	• Size: Small • Capstrap Headgear, Over the Nose Cushion • SE (Standard Elbow) • Packaged in sterile bag/container • Disposable - single use	Non-invasive ventilation mask for critical patient care with dual-limb circuits
	Medium - AF541 Mask SE (Standard Elbow), Capstrap	• Size: Medium • Capstrap Headgear, Over the Nose Cushion • SE (Standard Elbow) • Packaged in sterile bag/container • Disposable - single use	Non-invasive ventilation mask for critical patient care with dual-limb circuits

	Large - AF541 Mask SE (Standard Elbow), Capstrap	• Size: Large • Capstrap design stability and adjustable • SE (Standard Elbow) • Packaged in sterile bag/container • Disposable - single use	Non-invasive ventilation mask for critical patient care with dual-limb circuits
	Air Regulator, 50 PSI Preset, E Cylinder	• Small Cylinder Connection • Durable Brass	Needed for medical air shutdown to safely reduce high pressure from a small gas cylinder down to a safe, steady 50 PSI
	Air Regulator, 50 PSI Preset, H Cylinder, Nut and Nipple	• Large Cylinder Connection • CGA346 Nut and Nipple • Durable Brass	Needed for medical air shutdown to safely reduce high pressure from large gas cylinder down to a safe, steady 50 PSI
	Adult - Mini-Heart Continuous Nebulizer with Aerosol Mask	• Size: Adult • 7-ft Tubing • Packaged in sterile bag/container - single use	Critical care for asthma exacerbation patients to delivery medication

- I. **Description of the work to be performed:** The Chinle Comprehensive Health Facility (CCHCF), Respiratory Therapy Department request a Blanket Purchase Agreement (BPA) FY2026 to purchase respiratory therapy supplies inclusive of miscellaneous supplies to be ordered on an “as needed basis” as required by the respiratory therapist to provide direct patient care to the patients of the Chinle Service Unit.
- II. **Background:** The Respiratory Therapist provides critical direct patient care in the Emergency and Urgent Care, Intensive Care Units and Outpatient clinics. The supplies are a critical need to fulfill the IHS mission by providing comprehensive health care to the patients of the Chinle Service Unit. They provide respiratory support and sterile procedures to delivery air/oxygen, aerosol medication, non-invasive ventilation, nebulized treatment, delivery of high and low flow therapy and provide continued therapy during a medical air shutdown. Treatments to remove exhaled gas on ventilator, pulmonary secretions and contaminants/bacteria for mechanically ventilated patients. Anticipation of supplies required as the respiratory season is approaching. Ordering supplies on an “as needed basis” allows the Respiratory Therapy department to order what is necessary and will avoid excess inventory and unnecessary costs, the department is limited on space to store supplies.
- III. **Location of Work:** The Chinle Comprehensive Health Care Facility - Respiratory Therapy Department
Highway 191, Hospital Drive, Chinle, AZ 86503.
POC: Dwan Teller, Supervisory Respiratory Therapist
Contact: (928) 674-7246
- IV. **Period of Performance:** 12/01/25 – 9/30/26
- V. **Deliverable/Schedule:** Date of order and delivery of supplies will vary as the items and quantities will be ordered on an “as needed basis”.
- VI. **Performance Standards/Requirements:**
The Contractor/Vendor Shall:
- Have an active Unique Entity Identifier (UEI) registered with the System for Award Management (SAM)
 - Accept a Blanket Purchase Agreement (BPA)
 - Accept the Chinle Service Unit Tax Exemption
 - Provide Government pricing or better
 - Provide supplies compatible with the HVT (High Velocity Therapy) 2.0 System/equipment
 - Provide supplies required for direct patient care:
 - o Invasive procedure
 - o Non-invasive ventilation
 - o Ventilation to support breathing
 - o Continuous nebulizer
 - o Nebulized treatment
 - o Inline suction for sterile procedure
 - Provide the following in a timely manner:
 - o Quote with accurate itemized list of supplies, quantity and cost
 - o Process order within 48 hours
 - o Ensure a Packing Slip is included in each shipment
 - o Submit invoice in the Invoice Process Platform (IPP) to process payment
 - Ensure each item is properly packaged in a sterile bag/container, sufficient and safe for direct patient care
 - Be responsible for return and replacement of damaged items
 - Provide technical expertise to the Respiratory Therapist inquiring about respiratory products
 - Communicate with the Respiratory Therapist and TPOC on delivery status, delays and/or back order
