## Technical Capability Documentation

### Vehicle Forensics and Vehicle-Resident Data Sanitization Capability

#### Purpose

This document summarizes the **technical capabilities** of the proposed commercial solution and demonstrates alignment with ATF's **investigative and operational security (OPSEC)** requirements.

#### 1. Capability Overview

The proposed solution provides a **portable, field-deployable vehicle forensics capability** enabling authorized personnel to:

- Lawfully acquire vehicle-resident electronic data
- Analyze and report evidentiary artifacts
- Perform **controlled, auditable sanitization** of sensitive vehicle-resident data when authorized

The solution is **not designed for fleet management, telematics monitoring, or asset tracking**.

#### 2. Supported Functions

##### Forensic Acquisition

- Non-destructive access to supported vehicle systems
- Acquisition of infotainment, telematics, and control-module data
- Cryptographic hashing (SHA-256 or stronger)
- Examiner identification and activity logging

##### Analysis and Reporting

- Decoding of vehicle data into human-readable formats
- Timeline reconstruction and event correlation
- Examiner annotations
- Exportable reports (PDF and structured formats)

##### Vehicle-Resident Data Sanitization (OPSEC)

- Identification of sensitive data (e.g., location history, paired devices, user profiles)
- Controlled deletion workflows with safeguards
- Sanitization logging and verification reporting

# ATTACHMENT A

## 3. Operational Characteristics

- Offline / disconnected operation supported
- Field-deployable hardware
- Role-based access control
- Secure storage of acquired data

## 4. Training and Support

- Initial operator training included
- Law enforcement certification options available
- Technical support and software updates included during license term

## 5. Commercial Availability

- Commercially available without modification
- Fixed-price licensing
- Delivered within standard commercial timelines

## 6. Mission Alignment

This capability directly supports:

- Criminal investigations
- Evidence development and prosecution
- Undercover operations
- OPSEC and privacy risk mitigation

## Tradewinds Solutions Marketplace (TSM) Listing Summary

### Purpose

This document confirms the availability of the proposed solution through the **Tradewinds Solutions Marketplace (TSM)** and its eligibility for **post-competition acquisition**.

### 1. Tradewinds Overview

The **Tradewinds Solutions Marketplace** is a DoD-led platform that evaluates and competitively assesses commercial technology solutions under **Commercial Solutions Opening (CSO)** authority.

Solutions designated as **awardable** on TSM have:

- Undergone competitive evaluation
- Met baseline technical and business criteria
- Satisfied competition requirements for subsequent ordering

### 2. Listing Status

- **Solution Type:** Vehicle Forensics / Privacy / OPSEC Technology
- **Evaluation Method:** Commercial Solutions Opening (CSO)
- **Status:** Awardable (post-competition)

### 3. Acquisition Implications

Because the solution is awardable on TSM:

- Additional competition is **not required**
- Acquisition may proceed under **FAR Part 12**
- No Justification & Approval (J&A) is required
- Fixed-price commercial ordering is permitted

### 4. Use by Civilian Agencies

Civilian agencies, including DOJ components, may leverage TSM-evaluated solutions when acquiring commercial technology that aligns with agency mission needs and internal acquisition policy.

### 5. File Documentation

The TSM listing supports:

# ATTACHMENT B

- Market research conclusions
- Commerciality determination
- Post-competition acquisition strategy
