BRAND NAME SPECIFICATION:

This justification is based entirely on technical necessity and the critical importance of maintaining the program schedule to meet urgent operational commitments, as the specified make and models are the only components that can satisfy the mission requirements. The specified components are foundational to this baseline, having been originally selected for unique and proprietary integration characteristics that remain essential for the system's evolution to the program. Consequently, attempting to integrate a substitute would lead to a series of cost-prohibitive consequences, including a complete non-recurring engineering effort for interface redesign, custom software driver development, and full regression testing, which would not only duplicate previous investments but also introduce significant technical risk into a stable, mission-critical system.

Based on the above, it is not reasonable to conclude the potential savings from competition can offset the significant duplicative cost and schedule and mission impact associated with purchasing a new brand name product. Therefore, it is in the best interest of the Government to solicit and award this requirement on a brand name only basis.
