

Performance Work Statement (PWS)

OMNISSA HORIZON SOFTWARE SUPPORT

KEESLER AIR FORCE BASE (AFB), MISSISSIPPI

9 April 2026

Prepared By

81st Communications Squadron

510 H. Street

Keesler AFB, MS 39532

Provide independent assessment, analysis, consultation and support of the Omnissa Horizon software components used in the current Virtual Desktop Infrastructure (VDI) at Keesler Air Force Base (AFB), Mississippi (MS).

The VDI environment hardware consists of a four-node Dell/EMC VxRail cluster and 60 Dell Optiplex 3000 thin clients. The VDI environment utilizes Broadcom's vSphere Client, vCenter Server Appliance (VCSA); Omnissa's Horizon 8, Dynamic Environment Manager, Apps Volume Manager; and Microsoft's FSLogix software applications. PC-over-IP (PCoIP) protocol is used for network communication between thin clients and internal system components via a 10 GB network backbone. The VDI directly supports Keesler AFB's Emergency Operations Center (EOC) in Buildings 4213 and 4330.

The Contractor shall provide remote assistance and telephone support to meet the requirements as stated in this SOO. The Contractor shall provide analysis, assessment and consultation with limited down time or scheduled down time to minimize interruption of EOC activities. The contractor shall achieve the following objectives:

- Provide 50 hours of Ad Hoc support. Hours can be used for operational support requests and proactive project work. Unused hours shall be rolled over to subsequent annual renewal agreements.
- Provide an initial independent technical assessment of the current VDI architecture. The objective is to receive expert analysis and forward-looking recommendations that support modernization efforts, enhance security posture, and ensure long-term sustainment.
- Implement the use of the Omnissa Blast Extreme protocol to replace the currently used PCoIP protocol which reaches end of support in 2028.
- Provide technical support, and remote assistance to resolve degradation of service, and implement improvements to sustain the VDI's operational health and performance.
- Perform follow-up technical assessment and optimization review to ensure the VDI meets the evolving operational needs and mission goals of the Keesler AFB Emergency Operations Center (EOC) and other key stakeholders as needed.
