

Statement of Work (SOW) **for Fundamentals of Composite Structure Design Course**

Vendor: AMERICAN INSTITUTE OF AERONAUTICS AND ASTRONAUTICS (AIAA)

Scope of Work: Vendor will provide a 2-day course on Fundamentals of Composite Structure Design. Course content and methodology to include:

- Integration of a strong theoretical foundation with practical demonstrations to understand the “what,” “why,” and “how” of composites, including how they differ from metals and how manufacturing processes shape their performance.
- A combination of lectures, analytical reviews of lamina- and laminate-level mechanics, and a concluding demonstration of special layups.
- Development of participants' ability to evaluate structural behavior, specifically understanding how individual plies and stacking sequences influence stiffness, strength, and overall material performance.
- Cultivation of the core analytical concepts required for participants to transition from theoretical understanding to working confidently with composite materials in real-world structural design.

Deliverables: Provide 2 days of instruction (0800-1700 local time) and all course materials for up to [30] employees. *Note: Vendor pricing is all-inclusive of course materials and instructor travel.*

Project Schedule: Course to be delivered onsite at a customer-provided venue at NASA/Marshall Space Flight Center on June 23-24, 2026.
