VOLUME I - COMMERCIAL ACQUISITION OF SERVICES FOR TRAINING AND TESTING (CASTT)

1. INTRODUCTION

1.1. Mission

The Capability Program Executive for Simulation, Training and Instrumentation (CPE STRI) is the Army's premier organization responsible for acquiring, delivering, and

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

maintaining Test, Training, and Threat solutions to support both domestic and international Warfighters. With a portfolio of over 370 products deployed at more than 400 locations worldwide. CPE STRI ensures that statutory and regulatory testing and training requirements are met for Major Defense Acquisition Programs (MDAPs) (Abrams, Bradley, Stryker, Apache, Chinook, Black Hawk, etc.), partner nations, enabling the Combatant Commander's (COCOMs) and the Army Service Component Commander Theater Engagement Strategy.

CPE STRI operates under a mission to develop, deliver, and sustain cutting-edge capabilities that enhance readiness, interoperability, and operational effectiveness. Its Project Managers (PMs) and Project Leads (PLs) are tasked with driving innovation, ensuring compliance, and adapting to the Army's evolving needs. As the Army transforms to meet emerging threats and modernize its force, CPE STRI is committed to delivering agile solutions that align with the Army's modernization priorities and international security cooperation objectives.

1.2. Objective

This requirement reflects CPE STRI's commitment to transformation by adopting a task-based, outcome-focused, capability-centric, Agile Program Management approach that enables flexibility, responsiveness, and scalability. The contractor will play a critical role in supporting CPE STRI's mission by delivering specific, measurable results that ensure the success of testing, training, and threat capabilities for both domestic and international Warfighters. This is a mindset shift. Focus will be on task completion rather than staffing specific positions. Further, the contractor will provide the acquisition support services that are not resident within CPE STRI's Government acquisition workforce areas of expertise. The contractor will need to provide flexibility to surge unique and critical expertise. The intent of this effort is to provide the Government with highly specialized skills not easily sourced or cost effective within organic formations. The contractor will provide flexibility in execution as threats and priorities change. This is critical to the rapid and dynamic nature of the CPE STRI portfolio of systems. This shall provide CPE STRI the capability to adapt to the dynamic and unpredictable nature of multi-domain operations, technical evolutions in testing and training warfighter systems and disciplines.

1.3. Scope

The scope of this Performance Work Statement (PWS) is to define the acquisition support services required by the CPE STRI to effectively plan, execute, and manage a diverse portfolio of Training and Testing Acquisition Programs supporting the Department of War and our Allied Partners. These services are essential to ensure timely, compliant, and mission-aligned procurement activities across CPE STRI's portfolio and initiatives.

The contractor shall provide focused acquisition support to enable delivery of foreign and domestic training and testing systems in all phases of the acquisition lifecycle, including but not limited to requirements development, market research, acquisition strategy formulation, solicitation preparation, source selection support, contract administration, and closeout activities. Support shall encompass a wide range of contract types and vehicles, including but not limited to firm-fixed-price, cost-reimbursement, indefinite delivery/indefinite quantity (IDIQ), and other hybrid arrangements.

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

Services shall be tailored and flexible to meet the unique needs of CPE STRI's evolving mission. The contractor shall ensure that all acquisition support activities are executed in accordance with applicable Federal, Department of War (DoW), and Army acquisition regulations, policies, and best practices.

This effort includes support for both pre-award and post-award activities, and may span multiple program offices, functional areas, and stakeholder groups within CPE STRI. The contractor shall be capable of adapting to evolving mission requirements, emerging acquisition priorities, and dynamic funding environments, while maintaining a high standard of professionalism, responsiveness, and technical competence.

The current offices supported by this PWS include:

- Project Manager Training Devices
- Project Manager Synthetic Environment
- Project Manager Cyber, Test, and Training
- Project Lead TADSS Support Operations
- Project Lead International Programs Office
- Project Lead Enterprise Transformation and Integration

1.3.1. Non-Personal Services

The Government will neither supervise Contractor employees nor control the method by which the Contractor performs the required tasks. Under no circumstances will the Government assign tasks to, or prepare work schedules for, individual Contractor employees. It shall be the responsibility of the Contractor to manage its employees and to guard against any actions that are of the nature of personal services or give the perception of personal services. If the Contractor believes that any actions constitute, or are perceived to constitute personal services, it shall be the Contractor's responsibility to notify the Procuring Contracting Officer (PCO) immediately.

1.3.2. Conflicts of Interest

IAW 48 Code of Federal Regulations (CFR) § 3.104 Procurement Integrity and 48 CFR § 3.1103 Procedures, the Contractor shall require any of their employees participating in source selections to sign a nondisclosure agreement and disclose any potential conflicts of interest.

The Contractor shall ensure its employees do not have individual conflicts of interest as it relates to supporting the specific task order requirements.

Notice Of Potential Future Organizational Conflicts of Interest

(a) Notice. The Contracting Officer has determined that the Commercial Acquisition of Services for Testing and Training contract award will create a potential organizational conflict of interest (OCI) in the future competition for any CPE STRI or ACC-Orlando requirement other than a follow-on action related to this effort (i.e. SETA III or its

Distribution Statement A. Approved for public release: distribution is unlimited

replacement). The potential OCI will exist for the prime contractor, any subcontractor, joint venture, or other teammate involved in contract performance. In this case, the Contracting Officer has determined the identified OCI cannot be successfully neutralized or mitigated. Therefore, the contractor and its partners are ineligible to perform as a supplier, a subcontract supplier, or a consultant to a supplier for any other requirement within CPE STRI for the life of the Commercial Acquisition of Services for Testing and Training contract plus one year. This restriction is necessary to avoid unfair competitive advantage or potential bias on other competitions wherein contractor personnel may be utilized to provide support.

(b) Description of Potential Conflict. The contractor will assist in defining requirements, assist in building requirements packages, and assist in proposal evaluations. These actions will cause a conflict if the contractor attempts to submit proposals for requirements where it provided this support. Additionally, the contractor is imbedded with CPE STRI personnel so while not directly tied to a requirement the contractor could still have a conflict if its personnel have been made privy to information about other requirements that provide it with a competitive advantage.

1.4. Background

CPE STRI is transforming. The current organization is defined below for baseline purposes. This requirement is written to allow flexibility for when (not if) the organization changes.

1.4.1. Project Manager Training Devices (PM TRADE)

PM TRADE delivers world class training devices and training support capability to America's Warfighters. This PWS defines the non-personal program support services for PM TRADE and its subordinate organizations: Product Manager (PdM) Combat Training Instrumentation System (CTIS), PdM Synthetic Training Environment Live Training Systems (PdM STE LTS), PdM Tactical Training Systems (PdM TTS), and Product Director Virtual Training Systems (PD VTS). There are 23 direct mission programs, 21 are post Milestone C and 2 are pre-Milestone B.

PdM CTIS is a Direct Mission funded organization. PdM CTIS develops, fields, and performs acquisition life-cycle management of live combat training instrumentation systems at the three Maneuver Combat Training Centers (CTCs), Home Stations and the Joint Pacific Multinational Range Capability (JPMRC) to ensure no Soldier goes into harm's way untrained. PdM CTIS products collect and process training data such as real-time casualty assessments, simulate the Current Operating Environment, facilitate exercise command and control, and provide accurate and timely training feedback to the training units. PdM CTIS products enable seamless integration of Live, Virtual, and Constructive training domains through adherence to Common Training Instrumentation Architecture (CTIA) standards.

PdM CTIS manages the following programs:

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Combat Training Center-Instrumentation System (CTC-IS)
- Joint Pacific Multinational Readiness Capability Instrumentation System (JPMRC-IS)
- Home Station Instrumentation Training System (HITS)
- Soldier Monitoring System (SMS)

PdM STE - LTS is a Direct Mission and customer funded organization. The PdM now supports missions that focus on the Force-on-Force (FoF) and Live training portions of the Synthetic Training Environment (STE). These programs are designed to enhance the warfighter's capability to prepare for combat operations allowing training and assessment of individual and collective tasks during FoF and STE operations. PdM STE - LTS collaborates with the warfighter and other System PMs to develop and procure the required training aids, devices, simulators, and simulations (TADSS) supporting their fielded weapon systems. PdM STE - LTS provides life cycle management for all these systems ensuring Soldiers receive the required skills training needed to operate in the theater of operations. PdM STE - LTS supports FoF training capabilities worldwide. In the area of FoF training programs, PdM STE - LTS is the life-cycle manager of Tactical Engagement Simulation Systems (TESS) supporting the Maneuver CTCs, Home Stations, and deployed units in FoF training. These systems are used by every Soldier in the Army in FoF training to hone collective training and individual skills. Additionally, in the areas of STE training programs, PdM STE - LTS manages the new capabilities being developed to add new warfighter training tasks to the live training domain (i.e., mortars, artillery, etc.).

The PdM manages the following programs:

- Live Synthetic Training Environment
- Instrumentable - Multiple Integrated Laser Engagement Systems (I-MILES)

PdM TTS is a Direct Mission and customer funded organization. These programs are designed to train and qualify Soldiers on individual, crew, and collective tasks during Live-Fire training events. These programs provide Moving / Stationary Infantry and Armor Targets (MIT, MAT, SIT and SAT), Battle Effects Systems, thermal field cameras, player units, Information Technology equipment, and After-Action Review systems. PdM TTS provides life cycle management for all these systems ensuring Soldiers receive the required Soldiers skills training needed to operate in the theater of operations.

The PdM manages the following programs:

- Digital Range Training System (DRTS)
- Future Army System of Integrated Targets (FASIT)
- Air Defense Artillery – Targets (ADA – T)
- Multiple Ground Combat System (GCS) customer programs

PD VTS is 95% customer funded with one program of record. PD VTS provides an array of immersive and innovative virtual training solutions that enable Soldiers to improve their essential skills and save lives. Directly responsible for acquisition management and execution of TADSS mission support programs. Develop virtual training systems for

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited
operator, maintenance, driver, and interactive multimedia instruction for the Army, National Guard, and other DoW partners. These immersive training capabilities provide individual to collective level training in support of multi-domain operations.

The PD manages the following programs:

- Basic Equipment Maintenance Trainer
- Family of Maintenance Trainers
- Other

1.4.2. Project Manager Synthetic Environment (PM SE)

PM SE provides Operationally Relevant Constructive and Integrated Simulation Environments for the Warfighter. PM SE acquires, fields, and sustains constructive and virtual simulations used to support the Army's command and staff training requirements. PM SE is composed of 4 subordinate organizations: PdM Synthetic Warrior Systems (SWS), PdM Common Synthetic Environment (PdM CSE), PD Next Generation Constructive (NGC) and Product Lead (PL) Constructive Simulations Support (CSS). The PM SE portfolio includes future training capability via the Synthetic Training Environment (STE) and current training capability via legacy programs.

The PM SE portfolio consists of the following programs:

PdM SWS

- Reconfigurable Virtual Collective Trainer (RVCT) - STE
- Soldier Virtual Trainer (SVT) - STE
- Games for Training (GFT) - Legacy

PdM CSE

- Training Simulation Software (TSS)/Training Management Tool (TMT) - STE
- One World Terrain (OWT) - STE

PD NGC

- Next Generation Constructive (NGC) - STE
- One Semi Automated Force (OneSAF) - Legacy

PL CSS

- Joint Land Component Constructive Training Capability (JLCCTC) - Legacy
- Battle Command Training Equipment (BCTE) – Legacy
- Battle Command Training Capability – Equipment Support (BCTC-ES) – Hardware and licenses for JLCCTC user community
- Common Battle Command Simulation Equipment (CBCSE) - Hardware, licenses for software and the oversight of Facilities, Fixtures and Equipment (FFE) across multiple training sites

Distribution Statement A. Approved for public release: distribution is unlimited

1.4.3. Project Manager Cyber, Test, and Training (PM CT2)

PM CT2 is dedicated to delivering innovative, secure, and interoperable solutions that enhance the Army's cyber, test, and training capabilities. By integrating advanced technologies, agile acquisition strategies, and lifecycle management, PM CT2 ensures the readiness and superiority of the Warfighter in multi-domain operations.

PM CT2 oversees three subordinate organizations: the Instrumentation Management Office (IMO), Product Manager Forces Training Systems (PdM FTS), and Product Manager Cyber Resilience and Training (PdM CRT).

The Instrumentation Management Office (IMO) acquires and manages test instrumentation for Army test ranges and facilities, ensuring the Army's ability to conduct rigorous developmental and operational testing. IMO serves as the executor of Army-led Office of the Secretary of War Test Resource Management Center (TRMC) Central Test and Evaluation Investment Program (CTEIP) projects and funding. IMO interfaces with Army Test and Evaluation Command (ATEC), OSD TRMC, and other stakeholders to deliver cutting-edge instrumentation solutions that meet the Army's testing needs. IMO supports a wide range of test centers, including White Sands Test Center (WSTC), Aberdeen Test Center (ATC), Redstone Test Center (RTC), Yuma Test Center (YTC), Dugway Proving Ground (DPG), and others. Additionally, IMO provides program management for several science and technology efforts under budget authorities 3 and 4, which capture advanced development and prototyping on behalf of Army and DoW customers.

The Product Manager Forces Training Systems (PdM FTS) provides high-fidelity simulators and simulation systems to the Army, U.S. Special Operations Command (USSOCOM), and Joint forces for training and mission rehearsal. PdM FTS manages programs that enable Soldiers to train on individual, crew, and collective tasks, ensuring readiness for Multi-Domain Operations. Key programs include the Intelligence and Electronic Warfare Tactical Proficiency Trainer (IEWTPT), Special Operations Aviation Training Systems, Opposing Forces Attack Aircraft Shoot-back Capability (OA2SBC), Opposing Forces Mechanized Vehicle Replication (OMVR), Opposing Forces Surrogate Wheeled Vehicle (OSWV), and Threat-Integrated Air Defense System (T-IADS). PdM FTS ensures Soldiers receive the required training to operate effectively in combat environments via real time mission rehearsals and simulations.

The Product Manager Cyber Resilience and Training (PdM CRT) delivers the Persistent Cyber Training Environment (PCTE), a critical platform supporting U.S. Cyber Command (USCYBERCOM) and the Department of War Cyberspace Workforce. PCTE enables individual, team, and force-level training, mission rehearsal, and certification exercises, ensuring the readiness and lethality of the Cyberspace Workforce. As part of the Joint Cyber Warfighting Architecture (JCWA), PCTE integrates with other JCWA elements to provide a comprehensive, interoperable cyberspace training capability. PdM CRT supports standardized Joint Cyberspace Operations Forces training while automating and simplifying the training management process.

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

The Threat Systems Management Office (TSMO) supports Army readiness by providing adaptive threat operations and lifecycle management to enable realistic test, training, and experimentation environments. TSMO plays a critical role in validating threat systems and capabilities for Army Test & Evaluation and supports the development of realistic live-fire environments for defense systems. TSMO's key functions include supporting Army units with decision advantage capabilities, analyzing publicly available data, and conducting advanced experimentation to address emerging threats. The organization also leads the development, procurement, and validation of threat systems, including electronic warfare, integrated air defense, and ground and aerial systems. In addition, TSMO provides cyber operations support, including specialized teams and tools to enhance security and operational effectiveness. The organization also oversees distributed range operations and provides maintenance, sustainment, and refinement of threat tactics, techniques, and procedures. Through its comprehensive operations and program support, TSMO ensures the effective execution of training and testing environments, contributing to the Army's modernization and operational readiness.

1.4.4. Project Lead TADSS Support Operations (PL TSO)

The mission of the Project Lead TADSS Support Operations (PL TSO) is to execute the AR 350-38 TADSS Maintenance Program; provide integrated training systems sustainment and selected training services world-wide. PL TSO provides enterprise level Life Cycle Contractor Support (LCCS) across the globe. PL TSO manages a contract that is an enterprise solution providing support to Army Warfighter combat readiness and serves as a comprehensive "One Stop Shop" for training services.

PL TSO Devices Supported:

Devices include, but are not limited to the Close Combat Tactical Trainers (CCTT); Mobile Close Combat Tactical Trainers (MCCTT); Reconfigurable Vehicle Tactical Trainers/Reconfigurable Vehicle Simulator (RVTT/RVS); Aviation Combined Arms Tactical Trainer (AVCATT), Non-Rated Crew Member Manned Module (NCM23), Virtual Clearance Training System (VCTS), Virtual Convoy Operations Trainer (VCOT), and the Reconfigurable Virtual Collective Trainer (RVCT).

The CIS portfolio includes, but is not limited to the Live, Virtual, and Constructive Integrating Architecture (LVC-IA), Constructive Battle Command Simulations Equipment (CBCSE), IEWTPT.

Other devices include, but are not limited to the Engagement Skills Trainer (EST) II, Basic Electronic Maintenance Trainer (BEMT), Call For Fire Trainer (CFFT) III, Reconfigurable Table Top Trainer (RT3), Stryker Nuclear, Biological Reconnaissance Vehicle (NBCRV), Avenger Table Top Trainer (AT3), Avenger Institutional Conduct Of Fire Trainer (ICOFT), Anti-Tank Guided Missile (ATGM) Basic Skill Trainer (BST), Chemical Agent Monitor Simulator (CAMSIM), High Mobility Artillery Rocket System (HIMARS) Family of Systems, Improved Moving Target Simulator (IMTS), M270A1 Multiple Launch Rocket System (MLRS) Family of Systems and Stinger Troop Proficiency Trainer (STPT).

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

CREW portfolio includes, but is not limited to the Aviation Trainers, Transportation (AT), Gunnery, Maintenance and Driver Trainers (GMDT) and Watercraft School TADSS.

LIVE portfolio includes, but is not limited to the Ground TESS and Other TES portfolio which includes I-MILES, Combat Vehicle (CV) TESS, Individual Weapon System (IWS) 2010, Tactical Vehicle System (TVS), Stryker Mobile Gun System (MGS) Precision TESS, Improved Target Acquisition System (ITAS) TES, TES BASE, Government Lost, Damaged/Destroyed (GLD/D), Close Combat Mission Capability Kit (CCMCK), Counter Radio Electronic Warfare, Increment 2 (CREW 2), Improvised Explosive Device Effects Simulator (IEDES), and Common Thru Sight Video – Crew Module Unit Recorder (CTSV-CMUR). The Air TESS/HITS portfolio includes Air-Ground Engagement System (AGES) II, Longbow Apache TESS (LBA TESS), Man Portable Aircraft Survivability Trainer (MAST) (Army and Joint Forces), the Light Utility Helicopter (LUH) TESS, TASS Training Aircraft Survivability Equipment Stimulation Suite (TASS)/Threat Integrated Air Defense Systems (T-IADS), and Homestation Instrumentation Training Systems/Deployable Instrumentation System - Europe (HITS/DIS-E). The Lifesaving portfolio includes Medical Simulation Training Center (MSTC) maintenance, and MSTC Instructor/Operators contract. The Joint Pacific Multinational Readiness Capability – Instrumentation System (JPMRC-IS), Oahu, Hawaii program is a standalone program/portfolio.

CTC/Ranges portfolio includes but is not limited to the CTC program at the three Maneuver Combat Training Centers (MCTCs) – National Training Center (NTC), Ft Irwin, California; Joint Readiness Training Center (JRTC), Ft. Polk, Louisiana; and Joint Multinational Readiness Center (JMRC), Hohenfels, Germany. It also provides training support services for all approved training requirements within the Program Objective Memorandum (POM) guidelines and funding regulations directed by the DA and provides sustainment of After-Action Review (AAR) Tools for the Army Leadership to effectively evaluate the training readiness of their units. The Ranges portion is to provide effective and efficient Life Cycle management to the Department of the Army's Instrumented Ranges, Urban Operation training facilities and Tactical Engagement training devices. The Ranges and other training facilities under Ranges provide live TADSS training environments and training facilities that are realistic and challenging so that the Warfighter is equipped for all tactical situations.

PL TSO Liaison Representatives (LRs) provide effective, efficient and integrated Live, Virtual and Constructive training services through program management and contract monitoring. The LR provides oversight management, operations, sustainment and support of training aids, devices, simulations and simulators fielded to locations throughout the world.

PL TSO additionally provides support to various external customers to include ARNORTH, JMC, and Aviation Schoolhouse. The Flight School Training Support Services (FSTSS) Contract provides simulation services for the Aviation CoE rotary wing pilot training mission. Under ARNORTH PL TSO manages contracts providing training services in support of Chemical, Biological, Radiological, and Nuclear (CBRN) exercises

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited and Defense Support to Civilian Authorities. Additionally, PL TSO supports United States Army Joint Modernization Command (USAJMC) Strategic Planning Exercise Support. Finally, PL TSO supports training and training support services for additional customers on an as-needed basis under the Warfighter Training Readiness Support (W-TRS) Enterprise contract.

1.4.5. Project Lead International Program Office (PL IPO)

The CPE STRI International Program Office (IPO) develops, delivers, and sustains training, testing, and information operations capabilities to build partner capacity in support of National Security objectives. The IPO operates as a Security Assistance Management Directorate and Foreign Military Sales (FMS) Program Management Office supporting the Army Security Assistance Enterprise (ASAE), enabling partner nations' training capabilities through TADSS, operations and maintenance support, contractor logistics support, training, and sustainment. With activities in every combatant command across 60+ countries the IPO works closely with foreign military organizations to identify training needs, develop joint training programs, and potentially co-develop new simulation technologies.

Security Cooperation (SC) includes activities undertaken to encourage and enable international partners to work with the U.S. to achieve strategic objectives, including interactions with foreign defense and security establishments and DoW-administered security assistance programs that build defense and security relationships that promote U.S. interests, develop allied and friendly military capabilities, and provide U.S. forces with peacetime and contingency access to partner nations. Such activities increase the capabilities and capacities of partners, thereby enhancing our collective ability to deter aggression and defeat extremists.

Building Partner Capacity (BPC) are SC programs and security assistance activities that are funded by U.S. Government (USG) appropriations and administered as cases within the FMS infrastructure. BPC provides defense services for the purpose of building the capacity of the partner nation security forces and enhancing their capability to support US military and stability operations, multilateral peace operations and to conduct counterterrorism, counter drug, and counterinsurgency operations.

The IPO leads the development of documentation related to requests from partner nations for FMS procurements and services. The IPO engages with Security Cooperation Office (SCO) personnel at United States (US) Embassies across the Area of Responsibility (AOR) coordinating site visits, delivery of materiel, inquiries, Letters of Requests (LORs), Price and Availability (P&A), Letters of Offer and Acceptance (LOAs), Program Management Reviews (PMRs), Case Management Reviews (CMRS), and technical questions when discrepancies occur. Additionally, the IPO provides for the development of Requirements Packages documentation for contract processing and award to include performing and documenting systems during site-surveys, form-fits, property accountability, acceptance factory testing and site acceptance testing. This support includes planning, programming, and budget execution as well as awarding and managing competitive contracts to operate, maintain and sustain deployed TADSS and

Distribution Statement A. Approved for public release: distribution is unlimited
manage training services/training support efforts through FMS cases and pseudo-FMS Cases funded efforts.

IPO leads an average of 175 program/contract actions per year. Program/contract actions consist of activities such as Performance Work Statement (PWS) development/revision, Independent Government Cost Estimates (IGCEs), requests for contract pricing, technical evaluations, and Purchase Requests (PRs), Program Management Reviews (PMRs) and analysis as well as activities required to close out actions and financial reconciliation for the life of the FMS case.

IPO efforts for procurement span Live, Virtual, and Constructive training devices and simulators for Ground Combat Arms Forces to include but not limited various Army TADSS for Combat Arms air and ground vehicles; procurement of training in support of multiple rotary wing aircraft; classroom, on-the-job or over the shoulder or in-flight training; Aircraft Survivability Equipment Simulation Suite (TASS) and TESS; motion, or non-motion of various aircraft model series training simulators; desktop trainers (JCATS, VBS, and JTLS-GO), as well as the sustainment and support of other training devices.

A sample of the programs within the PL IPO portfolio include:

- CTC Instrumentation Systems – Combat Training Centers I-MILES Deployable Range Targetry, and Virtual Battle Space.
- Combat Vehicle Training Simulators – Gunnery Training Simulators, Tank Driver Trainer, Diagnostic Turret Troubleshooting Trainers, Live Engine Trainer, Advanced In-bore Marksmanship Training Enhancement System and Common Driver Trainer.
- Combat Dismounted Training Simulators – Small Army Tactical Skills Trainer, Improved Target Acquisition System –Tube-Launched, Optically Tracked, Wireless-Guided (TOW), Engagement Skills Trainer, Mobile Marksmanship Trainer, and Artillery Trainers.
- Combat Soldier MILES System – MILES, Stinger Troop Proficiency Trainer, One Semi-Automated Forces (OneSAF), Joint Fires Stationary Classroom.
- Ground Sustainment – Contract Logistics Support Includes Operations & Maintenance Support and Instructor/Operator Support for Ground System Trainers.
- Aviation LIVE - TESS, TADSS Sustainment, Mission Support, and Air Worthiness.
- Aviation Virtual – Training, Sustainment and simulators for Pilot and Maintainer, UH-60, Huey II, H-47ER, and AH-64E V6.
- Aviation Sustainment – Contract Logistics Support, Simulator Support, Instructor/Operator and Operations & Maintenance support for UH-60, AH-64, and CH-47.
- Aviation Training – Instructor/Operator and Maintainer Training Support: AH-64Ev6 and Huey II New Equipment, Pilot Transition, and Maintainer Training.

Distribution Statement A. Approved for public release: distribution is unlimited

- Sustainment and Training – Products, Services, Contract Logistics Support and Training for Live Virtual and Constructive Simulations media and tools at Combat Training Centers and Institutional Training Centers.
- Non-Platform Specific Ground Collective Training – Armored vehicle day and night live fire, maintenance, and maneuver training. Special Operations Forces Training Support. Joint Simulation Training and Support. Land Forces Ground Simulator Maintenance, Fires Support, MILES Support. Joint Training and Evaluation Center Support.

1.4.6. Project Lead Enterprise Transformation and Integration (PL ETI)

Project Lead Enterprise Transformation and Integration (PL ETI) enables Army modernization through agile acquisition, innovation, common architecture and Modular Open System Approach (MOSA), driving synchronization across the Project Management Offices to deliver capability faster to the Warfighter. PL ETI is responsible for developing enterprise level products and services that enable agile acquisitions, rapid prototyping and technology modernization, and the transformation to an enterprise product line that supports rapid development, deployment and operations of training capabilities across the Capability Program Executive for Simulation, Training, and Instrumentation (CPE STRI) portfolio of programs. This Performance Work Statement (PWS) defines the non-personal program support services for PL ETI for the Product Lead Unified Integration and Transformation Enterprise (PdL UnITE) and the Training and Readiness Accelerator II (TReX II).

PdL UnITE leads the transformation of the CPE STRI enterprise to streamline a horizontal portfolio and product line management by integrating people, processes, and tools in a way that enables CPE STRI programs to rapidly develop, secure, deploy and operate training capabilities in a secure, flexible and interoperable manner. PdL UnITE is the lifecycle manager of the Common Training Instrumentation Architecture (CTIA) / Live Training Transformation (LT2) Office, ACAT IV. PdL is responsible for the UnITE Training Enclave and UnITE Development Environment both on premises and in the cArmy Cloud environment. CTIA is directly funded as an Army Program of Record. The UnITE Infrastructure and Cloud capabilities are shared cost across the CPE STRI enterprise.

TReX II is an Other Transaction Agreement (OTA) contracting tool that expedites prototype development by memorandum of agreements with the partner agencies, as well as other documents that outlines the prototype acquisition approach. Effort includes continued oversight from pre-solicitation activities through completion/final delivery of the effort on multiple programs from various agencies. The TReX II OTAs can be CPE STRI programs that are directly funded as Army Program's of Record (PoRs) or customer funded across the user community.

2. APPLICABLE DOCUMENTS

The following documents form a part of this PWS to the extent specified herein. These are not all inclusive and the references are subject to change throughout the period of the

Distribution Statement A. Approved for public release: distribution is unlimited
contract. In the event of a conflict between documents referenced herein and the contents
of this PWS, the contents of the PWS shall be the governing requirement.

DoDI 3020.41	Operational Contract Support (OCS) Outside the United States	27 Nov 2024
FAR	Federal Acquisition Regulation	17 Jan 2025

3. REQUIREMENTS

The contractor shall provide the acquisition support and specialized services required by the CPE STRI and its PMs and PLs to effectively plan, execute, and manage a diverse portfolio of capabilities in support of the Army's testing and training requirements which increase combat readiness.

3.1. Overarching Requirements

The contractor shall comply with the documents / sections listed in Section 2.

IAW Procurement Integrity Act, the contractor shall require any of their employees participating in source selections, in an advisory capacity, to sign a nondisclosure agreement and disclose any potential conflicts of interest.

The contractor shall be in compliance with those security requirements specified in Contracts Security Classification Specifications, DD Form 254.

The contractor shall ensure all personnel requiring access to Government computer resources complete CPE STRI's training for operating and retaining a user account on a Government network.

Contractor personnel shall use their assigned Government (.ctr) email address for all email correspondence related to performance of Government's task orders.

Distribution Statement A. Approved for public release: distribution is unlimited

The contractor workforce shall maintain required certifications and security training.

The standard operating hours for on-site personnel are 0730-1615 hours, Monday through Friday. Core hours for on-site personnel are 0900-1500 hours, Monday through Friday.

3.1.1. Security and Safety

The Contractor shall implement and maintain security procedures and controls to prevent unauthorized disclosure and distribution of controlled unclassified and classified information in accordance with (IAW) CFR Title 32, Part 117 and DoDI 5200.48. Contractor facilities shall provide an appropriate means of storage of controlled unclassified and classified information and materials. The contractor is required to possess a Top Secret facility clearance (FCL) with No storage requirements. The contractor must comply with the security regulations and requirements outlined in the Contract Security Classification Specifications, DD Form 254, and any associated addendum sheets.

All employees of the contractor who will have access to U.S. Government systems and technical information must undergo a security investigation, although certain positions/duties may not require a security clearance. The appropriate clearance level will range from HSPD-12 (Tier-1) to Top Secret (Tier-5), depending on the sensitivity of the information being accessed. The contractor shall ensure that all employees performing under this contract have the appropriate clearance level for the specific requirements they are supporting. Specific tasks and duties may require personnel to be indoctrinated into Sensitive Compartmented Information (SCI).

3.1.2. Safeguarding

The Contractor shall be responsible for safeguarding all government equipment, information and property provided for contractor use. At the close of each work period, the Contractor shall secure all government facilities, equipment, and materials, as applicable,

3.1.3. Badging

The contractor shall provide information required for issuance of a Common Access Card (CAC) to the contract or individual Task Order Trusted Agent, as appropriate, for all personnel requiring access to Government facilities in performance of this contract.

For Contractors requiring Common Access Cards (CAC), the Contractor employee requires, at a minimum, a favorably adjudicated Tier 1 (T1) or an equivalent or higher investigation in accordance with Army Directive 2014-05, Policy and Implementation Procedures for Common Access Card Credentialing and Installation Access for Uncleared Contractors. The Contractor shall be responsible for submitting T1 requests. The Contractor employee shall be issued a CAC to include but not limited to the following duties (1) To meet Isolated Personnel Report (ISOPREP)/ mandatory training requirements (2) Both physical access to a DoW facility and access, via logon, to DoW networks on-site or remotely; (3) Remote access, via logon, to a DoW network using

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

DoW-approved remote access procedures; or (4) Physical access to multiple DoW facilities or multiple non-DoW federally controlled facilities on behalf of the DoW on a recurring basis for a period of 6 months or more. At the discretion of the sponsoring activity, an initial CAC may be issued based on a favorable review of the Federal Bureau of Investigation (FBI) fingerprint check and a successfully scheduled T1 at the Office of Personnel Management (OPM).

3.1.4. Hazardous Duty

Contractor personnel may be eligible for allowances typically available for DoW civilians deploying into difficult or hazardous conditions. The level of compensation allowable will be commensurate with U.S. State Department and OPM prevailing compensation rates for DoW civilian personnel.

Under this PWS, Hazardous Duty Pay is permissible only up to the level authorized by the Department of State Standardized Regulation (DSSR).

3.1.5. Anti-Terrorism (AT) Level 1 and Awareness Training

AT Level 1 Training is required for Contractor personnel performing work within an Army-controlled installation, facility, or area. All Contractor personnel, including Sub-Contractor personnel, requiring access to Army installations, facilities, or controlled access areas shall complete AT Level 1 awareness training within 30 calendar days after contract start date or effective date of personnel employment, whichever applies. The Contractor shall maintain certificates of completion for each affected Contractor personnel and Sub-Contractor personnel for submission to the COR upon request (or to the contracting officer, if a COR is not assigned). AT Level 1 awareness training is available at <https://jko.jten.mil/courses/AT-level1/launch.html>.

Anti-Terrorism Awareness Training for Contractor Personnel Traveling Overseas. U.S. based Contractor personnel and associated Sub-Contractor personnel are required to make available and to receive USG provided AOR specific AT awareness training as required by AR 525-13. Specific AOR training content is required by the combatant commander with the unit Anti-Terrorism Officer (ATO) being the local point of contact.

3.1.6. Cybersecurity/Information Technology (IT) Training

If required, all contractor employees and associated Subcontractor employees must complete the DoD cybersecurity awareness training before issuance of network access and annually thereafter. Cybersecurity/Information Technology training can be accomplished at <https://public.cyber.mil/training/cyber-awareness-challenge/>

3.1.7. Operational Security (OPSEC) Training

Per AR 530-1, Operations Security (OPSEC), Contractor personnel must complete Level 1 OPSEC training within thirty (30) calendar days of reporting for duty. All Contractor personnel must complete annual OPSEC awareness training. The Contractor shall ensure all applicable personnel have completed OPSEC initial training and annual

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited
refresher training and shall certify that their work force has completed the training through the submission of completion certificates(s) upon request to the COR/ Contracting Officer within 30 days of arrival on the installation.

OPSEC training can be accomplished at the Defense Security Services website at: <https://securityawareness.usalearning.gov/opsec/index.htm>.

3.1.8. iWATCH Training

The Contractor and all associated Sub-Contractors shall brief all personnel on the local iWATCH program (training standards provided by the requiring activity ATO). This local developed training will be used to inform personnel of the types of behavior to watch for and instruct personnel to report suspicious activity to the (COR). This training shall be completed within 30 calendar days of contract award and within 30 calendar days of new personnel commencing performance with the results reported upon request to the COR/ Contracting Officer no later than sixty (60) calendar days after contract award.

3.1.9. Counterintelligence Awareness and Reporting (CIAR)

All contractors and subcontractors with security clearances will complete Counterintelligence Awareness and Reporting (CIAR) training within 30 days of assignment and every 12 months thereafter, as mandated by DoDD 5240.06. The following computer-based training satisfies Army training requirements; "Counterintelligence Awareness and Reporting for DoD Employees" (CI116.16) and is available at <https://www.cdse.edu/>.

3.1.10. Synchronized Pre-deployment and Operational Tracker (SPOT)

The Contractor shall ensure SPOT applicability with respect to visiting countries, in accordance with the DoD Foreign Clearance Guide, at the following address, <https://www.fcg.pentagon.mil/fcg.cfm>.

SPOT has been designated as the Joint Enterprise Contractor management and accountability system to provide a central source of contingency Contractor information and a summary of contract services IAW DODI 3020.41. USG representatives are required to maintain, by-name, Contractor accountability within SPOT. Contractor administrators shall register for a SPOT account at <https://spot.dmdc.mil> and provide the necessary information for all deploying Contractor personnel. All Contractor data shall be entered into the SPOT database for all Contractor personnel traveling to any OCONUS and CONUS location. The Contractor shall coordinate with the USG Procuring Contracting Officer (PCO), Contracting Officer's Representative (COR) and respective Combatant Command (COCOM).

Contractor personnel must have a SPOT generated Letter of Authorization signed by the cognizant USG Procuring Contracting Officer (PCO) in order to process through a CONUS Replacement Center (CRC) or to travel to, from, or within the designated operational area. The Letter of Authorization also will identify any additional

Distribution Statement A. Approved for public release: distribution is unlimited
authorizations, privileges, or USG support that Contractor personnel are entitled to under
the resulting contract.

3.1.11. Army Training Certification Tracking System (ATCTS)

All Contractor employees with access to a government Information System (IS) must be registered in the Army Training Certification Tracking System (ATCTS) at commencement of services and must successfully complete the DoD Information Assurance Awareness Training prior to access to the IS and then annually thereafter.

3.1.12. Performance or Delivery in a Foreign Country

The Contractor shall comply with DFARS clause 252.225-7043, Antiterrorism/Force Protection for Defense Contractors outside the U.S. Non-local national Contractor personnel must comply with theater clearance requirements. Detailed guidance for all contractor travel requirements will be specified within the contract.

3.1.13. Handling or Access to Classified Information

The Contractor shall comply with FAR 52.204-2, Security Requirements. This clause involves access to information classified "Confidential," "Secret," or "Top Secret". The Contractor shall comply with (1) The Security Agreement (DD Form 441), including the National Industrial Security Program Operating Manual (NISPOM) (CFR Title 32 Part 117) and (2) any revisions to CFR Title 32 Part 117.

3.1.14. Controlled Unclassified Information (CUI)

The contractor shall comply with all applicable cybersecurity requirements as outlined in DFARS Clause 252.204-7012, "Safeguarding Covered Defense Information and Cyber Incident Reporting." This clause mandates compliance with the National Institute of Standards and Technology (NIST) Special Publication (SP) 800-171, "Protecting Controlled Unclassified Information in Nonfederal Systems and Organizations." The contractor shall comply with DFARS Provision 252.204-7019, "Notice of NIST SP 800-171 DoD Assessment Requirements," which requires the contractor to have an adequate NIST SP 800-171 summary assessment score within the Supplier Performance Risk System (SPRS) in the Procurement Integrated Enterprise Environment (PIEE).

The Government will verify that vendors have a medium- or high-level NIST SP 800-171 assessment score of 110 or better, as described in the "NIST SP 800-171 DoD Assessment Methodology." This score must be visible within SPRS. If a vendor's assessment score does not meet the required threshold, DFARS Clause 252.204-7020, "NIST SP 800-171 DoD Assessment Requirements," shall be included in the contract. The contractor shall provide their "System Security Plan" and "Plan of Action and Milestones" (POA&M) for NIST SP 800-171 compliance verification and assurance by the Government. The contractor shall ensure full compliance with cybersecurity requirements to safeguard controlled unclassified information (CUI) and support the Department of Defense's cybersecurity objectives.

Distribution Statement A. Approved for public release: distribution is unlimited

Pursuant to DoDI 5200.48, Section 3, Programmatics, every individual at every level, including DoW civilian and military personnel as well as Contractor personnel providing support to the DoW, will comply with the requirements for initial and annual refresher CUI training. DoD Mandatory CUI training is available at the following website: <https://securityawareness.usalearning.gov/cui/index.html>.

3.1.15. USG Directed Travel/Temporary Duty

Some tasks require the contractor to travel and provide on-site support at various locations. The contractor shall support direct and remote locations as needed. The contractor shall support international and domestic travel as required in the defined taskings. The contractor shall ensure compliance with Joint Travel Regulations and ensure appropriate pre-travel security briefings and post-travel debriefings are conducted IAW Counterintelligence Awareness and Reporting (CIAR) requirements. When required to travel in support of the PMs/PLs acquisition programs, the contractor shall provide daily Travel Reports, end of trip Situation Reports (SITREPs), Storyboards, and photos as defined in the travel tasking.

This requirement will require Contractor personnel to travel to, from and within CONUS and OCONUS locations as specified by the contract. All travel shall be conducted and invoiced IAW with FAR 31.205-46 Travel Costs and the Joint Travel Regulations (JTR). All travel requirements shall be pre-approved by the (COR). The Contractor shall be responsible for coordinating all travel arrangements to, from, and in-and-about all CONUS and OCONUS Points of Destination. Costs incurred for lodging, meals, and incidental expenses shall be considered reasonable and allowable only to the extent that they do not exceed on a daily basis the maximum per diem rates, authorized for Federal civilian personnel, in effect at the time of travel. Airfare costs shall be the lowest priced airfare available to the Contractor during normal business hours. Airfare costs in excess of the above standard airfare are unallowable except as authorized under FAR 31.205-46(b).

Additionally, the following applies:

Non-program management office travel shall be conducted and invoiced IAW FAR 31.205-46 Travel Costs and the JTR.

3.1.16. Military Extraterritorial Jurisdiction Act (MEJA) Compliance

The Contractor shall comply with Department of Defense Instruction (DODI) 5525.11 - Criminal Jurisdiction over Civilians Employed By or Accompanying the Armed Forces outside the United States, Certain Service Members, and Former Service Members. The Contractor shall maintain a copy of each employee's written acknowledgement of receipt of the notification prior to travel/deployment and have this available for the (COR or IPO USG Representative if no COR appointed, select one) upon request.

Distribution Statement A. Approved for public release: distribution is unlimited

IAW DODI 5525-11, Paragraph 6.1.5, it is DoD policy that the requirement for order and discipline of the Armed Forces OCONUS extends to civilians employed by or accompanying the Armed Forces, and that such persons who engage in conduct constituting criminal offenses shall be held accountable for their actions, as appropriate.

3.1.17. Passports

Contractor personnel who are US citizens and are traveling abroad shall possess a valid U.S. passport and all appropriate visas and clearances required to conduct the assigned overseas missions. (See - <https://www.fcq.pentagon.mil/fcq.cfm>)

3.1.18. Licenses

Contractor personnel who are US citizens, shall possess valid U.S. (State) and/or international driver's licenses, as required. The Contractor shall ensure licenses remain valid during the entire performance period.

3.1.19. Use of Illegal Substances

All Contractor and subcontractor personnel shall be subject to both U.S. and local laws regarding illegal or unauthorized substances or items. Accordingly, the Contractor shall establish a zero-tolerance policy with respect to substance abuse.

3.1.20. Incident Reporting

The contractor shall promptly report pertinent facts regarding incidents involving USG property damage, personnel misconduct and/or injury to personnel and to cooperate in any resulting safety and/or security investigations. The Contractor shall adhere to the following INCIDENT LEVELS (IL), based on severity, when determining specific incident reporting protocols. These reporting requirements should not be perceived to take precedence over an individual's personal assessment with regard to his or her own health and well-being. The Contractor shall prepare an Accident/Incident Report IAW the CDRL (DI-SAFT-81563, Accident/Incident Report).

MINOR INCIDENTS: The Contractor shall report pertinent facts regarding the incidents involving minor equipment/property damage, personnel misconduct and/or injury WITHIN 48 hours of the initial discovery. The Contractor shall notify the appropriate USG POCs (i.e. COR) via telephonic or electronic (email) means. For this IL, minor property damage is defined as damage that does not pose any risk of non-performance of the requirement (s) for which it was intended and poses no risk of bodily injury to any person (s) operating in and around it. For this IL, minor injury is defined as superficial, including but not limited to minor cuts, bruises or muscle strains.

MODERATE INCIDENTS: The Contractor shall report pertinent facts regarding incidents involving moderate equipment/property damage, personnel misconduct and/or injury within 24 hours of the initial discovery. The Contractor shall notify the appropriate USG POCs (i.e. cognizant PCO, local authorities and COR), where applicable, telephonically). A voice mail message left telephonically is not acceptable to meet this requirement. Within 48 hours of the initial verbal report, the Contractor shall submit an

Distribution Statement A. Approved for public release: distribution is unlimited

Accident/Incident Report IAW the CDRL to the PCO and the (COR). For this IL, moderate equipment/property damage is defined as damage that causes a diminished training capability and poses some risk of non-performance of the requirement (s) for which it was intended and/or poses some risk of bodily injury to any person (s) operating in and around it. For this IL, moderate injury is defined as injuries that temporarily incapacitate an individual (to include but not limited to, twisted ankles and concussion) but which does not pose any significant hindrance to the Individuals' performance of the requirement(s).

MAJOR INCIDENTS: The Contractor shall report pertinent facts regarding incidents involving major equipment/property damage, and/or major personnel misconduct, and/or major injury or fatality IMMEDIATELY upon initial discovery, in person or telephonically, to the appropriate USG POCs (i.e. cognizant PCO, Program Director, local authorities). A voice mail message left telephonically is not acceptable to meet this requirement. The Contractor shall also IMMEDIATELY secure the site to ensure the preservation of evidence and cooperate in any resulting safety and/or security investigations. Within 24 hours of the initial verbal report, the Contractor shall submit an Accident/Incident Report IAW the CDRL to the PCO and (COR). For this IL, major equipment/property damage is defined as damage that ceases, severely diminishes the training capability and/or poses a serious risk of bodily injury to any person(s) operating in and around it. For this IL, major injury is defined as any injury/illness that completely incapacitates an individual, to include but not limited to bone breaks, loss of limb(s).

After an incident, the Contractor shall take appropriate steps to correct the situation and inform the USG of the corrective action taken.

3.2. Agile Program Management

The contractor shall implement Agile program management methodologies across all task areas to improve delivery speed, quality, flexibility, and responsiveness to CPE STRI, the Warfighter, and Partner Nation needs.

3.2.1. Agile Framework Implementation

The contractor shall:

- Establish and maintain a Scaled Agile Framework (SAFe) *or equivalent* methodology for managing all tasks and present it to the Government within 30 days
- Implement Sprints to prioritize tasks and efforts across the CPE with the Government at least monthly
- Create and manage backlogs with prioritized tasks within Sprints
- Implement continuous process improvement
- Track and utilize Agile artifacts and documentation such as backlogs, user-stories, burndown charts, feature definitions-of-done, sprint reviews, and sprint demonstration outcomes.

Distribution Statement A. Approved for public release: distribution is unlimited

3.2.2. Agile Team Structure

The contractor shall:

- Organize teams aligned to value streams proposed by the contractor and agreed to by the Government
- Establish roles and responsibilities for each Agile Team to ensure delivery of capabilities to our Warfighters and Foreign Partners
- Implement required Agile ceremonies such as daily stand-ups, sprint planning, reviews, and retrospectives
- Foster team self-organization and accountability
- Be prepared to incorporate into existing Government Agile team structures where applicable

3.2.3. Agile Metrics and Reporting

The contractor shall:

- Implement velocity tracking and burndown/burnup charts for the tasks prioritized by the Government
- Measure cycle time and lead time for work products and deliverables
- Track and report on task completion rates and quality metrics in human readable reporting venues and dashboards in real-time
- Provide visualization of work in progress and impediments (blockers)
- Deliver traditional Contract Data Requirements List (CDRL) information using Agile tools and dashboards for continuous monitoring (DI-MISC-80711A, Knowledge Management Portal and Dashboard)

3.2.4. Agile Tools and Technology

The contractor shall:

- Implement and maintain Agile project management tools within the existing Army Enterprise Information Environment
- Develop and maintain information radiators and dashboards
- Integrate dashboard data into other enterprise systems
- Establish continuous integration/continuous delivery (CI/CD) pipelines, where applicable
- Create automated testing frameworks for applicable deliverables

3.2.5. Agile Training and Coaching

The contractor shall:

- Provide Agile training to Government and contractor personnel as required
- Coach teams on Agile best practices and methodologies as required
- Facilitate Agile ceremonies and events
- Support organizational change management for Agile adoption

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

3.2.6. Agile Implementation Plan and Management

The contractor shall propose and manage this contract using an Agile Implementation Plan detailing the following information:

- Framework selection and customization
- Team structure and roles
- Tools and technology approach
- Implementation timeline
- Provide this Plan at award through the Knowledge Management Portal and update as required through the life of the task order

As part of the plan, the contractor shall document known task backlogs. The contractor shall inform the Government of their plan to address the backlogs to include:

- Requirements prioritization
- User stories with acceptance criteria
- Dependencies or constraints
- Estimated effort to address the backlog
- Sprint Planning and Review Documentation
- Sprint goals and objectives
- Committed user stories
- Acceptance criteria
- Definition of Done
- Demo materials
- Agile Performance Dashboard
- Velocity metrics
- Quality metrics
- Impediment tracking
- Task burndown

3.2.7. Agile Maturity Assessment

The contractor shall provide during monthly Sprint retrospective reviews and dashboard:

- Improvement recommendations
- Success metrics
- Updated implementation roadmap

3.2.8. Key Personnel (Agile Program Manager)

The Agile Program Manager (PM) has a pivotal role within the project team, responsible for leading the implementation of Agile methodologies to ensure the successful delivery of the Government's objectives. The COR will review and approve the Contractor's Agile PM's resume. If the approved Agile PM departs from the company, the contractor shall provide a new COR Approved Agile PM within 30 days of departure. The Agile PM must possess a robust understanding of Agile principles, including Scrum, Kanban, and Lean methodologies, and demonstrate a proven track record of successful leadership in Agile environments. This includes the ability to facilitate Agile ceremonies,

Distribution Statement A. Approved for public release: distribution is unlimited

foster collaboration among cross-functional teams, and drive continuous improvement initiatives. The Agile PM will be expected to mentor team members in Agile practices, ensuring adherence to Agile frameworks while adapting to the unique needs of the supported Government organizations. The ideal candidate will have experience in managing complex Agile projects, showcasing their capability to navigate challenges and deliver results in a dynamic and fast-paced environment.

3.2.8.1. Specific Experience Requirements for the Agile Program Manager

To effectively fulfill the role of Agile Program Manager, candidates must meet the following experience requirements:

- **Years of Experience**
 - Minimum of **5 years** of experience in Agile project management. ***Note, the previous CPE STRI SETA contracts are not considered Agile requirements.
- **Types of Agile Projects**
 - Proven experience leading **at least 3 Agile projects** from inception to completion.
 - Experience in managing projects that involve **cross-functional teams** and multiple stakeholders.
 - Demonstrated success in projects that required **rapid iteration and feedback loops**, such as software development or product management.
 - Familiarity with **Agile transformations** within organizations, showcasing the ability to implement Agile practices at scale.

3.3. Acquisition Task Areas

The contractor shall provide the acquisition support services to support the Government's programs in section 1.4 above and manage the task backlog in accordance with section 3.2 above. The contractor shall manage and execute tasks within the following functional buckets:

3.3.1. Resource and Operations Execution

The contractor shall provide the following capabilities:

- Planning and programming associated with near and long-term funding requirements
- Engaging in the development of data call responses
- Creating briefings to include actionable insights and recommendations to support decision-making
- Planning and coordinating Solider, vehicle, and ammunition requests for Government test events
- Creating elements of requirements packages for contracting efforts
- Providing input and feedback for financial reconciliation efforts associated with contract award, contract monitoring, and contract closeout

Distribution Statement A. Approved for public release: distribution is unlimited

- Developing Integrated Master Schedule (IMS) and monitor utilizing tools such as MS Project
- Evaluating Range operations and safety compliance reflecting current Army range standards.
- Facility requirements analysis, including but not limited to range operations expertise
- Installation configuration recommendations based on tactical scenarios
- Integration requirements with existing systems reflecting current field deployment practices
- Safety compliance verification according to established range safety protocols
- Identifying and reviewing changes to actual tactical systems and equipment and evaluating their impact on associated simulation, training, testing and threat system functional, allocated and product baselines
- Developing programmatic dashboards and metrics that are usable in existing enterprise tools such as Power BI and leverage data from Government databases such as Project Management Resource Tools (PMRT)
- Organizing, drafting and submitting (monthly) information regarding organizational activities and accomplishments for internal and external publication and on occasion, may need to present or attend events for the program teams
- Supporting conferences and exhibits that require program participation (i.e. I/ITSEC, GameTech, AUSA, Electronic Entertainment Expo, GamesCom) as directed and approved by senior Government leadership and higher headquarters
- Identifying and investigating commercial product developments, industry independent research and development programs, Small Business Innovation Research (SBIR) programs, and other Government agency research programs for ongoing changes or integration into programs
- Development of strategic plans, recommendations, and documentation in support of mission requirements as they pertain to fielded program capabilities, cost-effective implementation of systems and their requisite life cycle management support
- Oversight of integration and testing approaches and events and perform post-mission analysis of process improvement opportunities.
- Analysis of effectiveness of systems to meet training system requirements
- Applying materiel acquisition processes, applying expertise in computer-based simulations, supporting detailed analyses of simulator interoperability designs and approaches, conducting data metrics analyses, mission readiness, returns on investment, and related solutions to improve mission effectiveness
- Developmental documentation, test and evaluation analyses and review (for both contractual and post-event timeframes), metrics development/analyses/reporting, and airworthiness release/test/report oversight documentation.

3.3.2. Risk Management Analysis

The contractor shall provide the following capabilities:

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Providing Configuration Management (CM) of Acquisition products utilizing commercial tools like Jira and Confluence and STRI's standardized CM tools
- Maintaining an understanding of program acquisition strategies, issues and risks with emphasis on cost, schedule, and performance
- Attending and participating in Program Management Reviews (PMRs), Integrated Product Teams (IPTs), sustainment reviews, and other coordination meetings to identify and address program-related issues. The contractor shall provide recommendations to the Government based on meeting outcomes.
- Analyzing organizational issues, defining courses of action (COAs), and recommending initiatives to improve execution. The contractor shall support performance improvement programs and provide guidance on enterprise-level management and operations.
- Providing expertise using AI platforms to create efficiencies within the organization. Included shall be the ability to train our workforce on how to use AI platforms effectively.

3.3.3. Documentation Streamlining

The contractor shall provide the following capabilities:

- Developing, editing, and maintaining high-quality acquisition documentation
- Translating complex technical concepts into accessible language for diverse audiences leveraging experience and modernized, secure tools
- Supporting the lifecycle of documentation from initial drafts through final publication and configuration management
- Ensuring documentation is developed in accordance with Army policy and regulations

3.3.4. Military Doctrine Analysis

The contractor shall provide the following capabilities:

- Evolving military doctrine and assessing its implications on STRI's current and future programs
- Emerging training requirements
- Force structure changes
- Military Operational Specialties and their application to training systems, to include Special Operations Forces, Cyber, and Intelligence
- Doctrinal changes across multi-domain operations (MDO)
- End-to-end planning and integration for Joint and Coalition strategy level meetings
- Emerging Army concepts to ensure STRI's programs remain aligned with operational requirements and strategic objectives
- Reviewing and validating training and technical publications to ensure accuracy and alignment with operational requirements. The contractor shall provide recommendations for changes or modifications as needed.

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Identifying and reviewing changes to actual tactical systems and equipment to evaluate their impact on associated simulation, training, and simulation product baselines

3.3.5. Product Support Execution

The contractor shall provide the following capabilities:

- Coordinating with Gaining Command installations' / foreign partner site representatives to schedule and execute new equipment fieldings (NEF) and new equipment training (NET)
- Engagement in customer strategy meetings, installation support requirements meetings, site construction inspections, site surveys, data collection, form/fit tests, Operational Verification Demonstrations, and Maintenance Training and Training programs
- Planning and coordinating for Soldier and vehicle support for NEF and NET. Developing and processing the appropriate request forms IAW MACOM requirements for scheduled events
- Maintaining functions focused on:
 - Developing Maintenance Concepts and documenting them in Maintenance Allocation Charts (MAC)
 - Developing reliability and maintainability inputs for the Level of Repair Analysis (LORA)
 - Overseeing Technical Manual development to accurately capture the required maintenance and associated troubleshooting processes
 - Managing and reviewing obsolescence.
- Technical Publication Streamlining, with vast knowledge of military writing, Standard Operating Procedures, technical manuals, technical publications, and military standards to outline, prioritize and complete technical writing tasks in a manner that coincides with overall program cost, performance, schedule and integrated product support (IPS) elements. The contractor shall have working knowledge of MIL-STD 40051, MIL-HDBK 1222, and eXtensible Markup Language. Oversee the technical manual development process including validation and verification with appropriate target audience users.
- Logistics Data analysis focused on creating and/or maintaining provisioning data.
- Logistics analysis focused on creating requirements / contractual documents for the 12 elements of Integrated Product Support (PS) IAW DoDI 5000.91
- Logistics analysis focused on creating CDRLs and reviewing deliverables for the 12 elements of PS
- Logistics analysis and development of life cycle support requirements and documenting in regulatory documents (such as LCSP, IUID Plan, Material Release Documentation etc.)
- Logistics analysis and development of Materiel Fielding processes and associated documentation (such as Fielding Readiness Review, Material Fielding Plan, Memorandum of Notification etc.)

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Logistics analysis and property accountability actions and the population/creation of associated documentation (such as DD Forms)
- Supporting property accountability and inventory management, including GFP tracking, site reviews, and coordination of equipment transfers. The contractor shall monitor property management activities identifying failures to comply with AR 735-5 policies
- Supporting the coordination of the disposal and divestment of TADSS, including transportation, property book updates, and cost estimates. The contractor shall ensure all activities comply with DLA instructions and Army policies.
- Training and training systems experience as well as military, contracting, and program management experience, inventory management , transfer of equipment, and training coordination.

3.3.6. Business Manager Support

The contractor shall provide the following capabilities:

- Verifying compliance with applicable statutory and regulatory guidance as relates to funding actions.
- Providing support in the research, execution and reconciliation of program funds (to include but not limited to unliquidated obligations (ULOs), commitments, obligations, and disbursements)
- Preparing for and maintaining a state of Audit Readiness across the portfolio, including all required CPE program reviews and updates across multiple Government tools.
- Ensuring contract funding actions are addressed correctly, in collaboration with the Government Business Manager, Budget Analysts and the Army Contracting Command or other Government contracting teams.
- Supporting funding research, planning (short and long term), analysis, updating funding data across multiple Government tools, responding to data calls, development of funding strategies and the creation and briefing of related material to leadership
- Contract Execution Reports (DI-MGMT-81928, Contractor's Progress and Status Report)
- Proficiency in the financial systems used by the Government (see Appendix for examples).
- Creating Purchase Requests (PR) and Military Interdepartmental Purchase Requests (MIPR)

3.3.7. Management Process Support

The contractor shall provide innovative Agile Office management with goal to improve organizational processes and communication internally and externally:

- Preparing, receiving, coordinating, staffing, and distributing correspondence, materials, and briefings (IAW AR 25-50).
- Managing the receipt of visitors and phone calls for the office
- Administering hardcopy files and electronic records for the office

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Coordinate travel arrangements, schedule appointments, maintaining calendars, and tracking actions ensuring incorporation in Common Operating Picture.
- Manage facility planning, coordinating, and executing the movement of personnel between offices
- Performing general office management duties, including office supply management and ordering through the Government Purchase Card Holder.
- Administering timecards for the office
- The contractor shall review all internal management processes to identify inefficiencies, develop recommended measures for improvement, and provide recommendations to the Government for evaluation and implementation

4. UNIQUE ACQUISITION TASK REQUIREMENTS

The contractor shall provide the following acquisition support and specialized services:

4.1. PM TRADE TASK AREAS

All of PM TRADE's Task Areas are covered in section 3 above.

4.2. PM SE TASK AREAS

All of PM SE's Task Areas are covered in section 3 above.

4.3. PM CT2 TASK AREAS

4.3.1. Threat Systems Management Office (TSMO)

In addition to the common requirements defined in section 3, the contractor shall provide unique Test and Threat Engineering Support.

Test and Threats Engineering:

- Drive continuous, threat-based Test and Evaluation (T&E) by conducting automated testing and simulated adversarial assessments throughout the entire system lifecycle to proactively identify and mitigate vulnerabilities.
- Formulate and define system concepts, architectures, and requirements driven by comprehensive threat modeling and analysis, ensuring security and resilience are foundational to the design.
- Synthesize system designs using a "test-first" approach, developing and maintaining models and specifications that evolve through continuous, iterative testing and feedback.
- Conduct rapid prototyping and data-driven trade studies to analyze system architectures and integration approaches, assessing risk and performance from a threat-centric perspective to determine optimal technical solutions.
- Provide specialized expertise in evaluating the security and resilience of critical components—including control systems, end-to-end operational sequences,

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited
defensive and offensive digital techniques, data links, and command-and-control functions—through rigorous adversarial testing.

- Develop and manage "testable" design guides, specifications, and acquisition documents, implementing automated compliance checks and evaluating all system improvements, upgrades, or changes based on empirical test data.
- Assess and implement timely technology insertions by establishing an automated and secure framework for development and deployment, and performing rigorous security evaluations on third-party products before integration.
- Lead and integrate digital security test and evaluation initiatives across the full lifecycle, from planning and development through verification, validation, and operational use.
- Analyze program plans and operational threat data to develop and maintain an agile, threat-informed test strategy, providing actionable intelligence and recommendations to government project leads.
- Serve as the primary technical liaison for Threat Operations and Lifecycle Management, providing expert support for developing acquisition documentation, statements of work, cost estimates, and technical evaluations to ensure a constant focus on threat-based engineering.

4.3.2. Instrumentation Management Office (IMO)

The contractor shall provide the following unique task area capabilities:

- Preparing IMO Specific Test Instrumentation Development Package (updated quarterly)
- Reporting Test Execution Status (monthly)
- Implementation status of active test instrumentation projects
- Preparing Test Range Modernization Documentation Package
- Facility requirements analysis
- Providing Test event integration recommendations
- Safety compliance verification
- Cyber impacts analysis and compliance improvements

4.3.3. Product Manager Forces Training Systems (PdM FTS)

The contractor shall provide the following unique task area capabilities:

- Special Operations Forces familiarity and experience.

4.3.4. Product Manager Cyber Resilience and Training (PdM CRT)

The contractor shall provide the following unique task area capabilities:

- Cyber Training Environment Development Package
- Implementation status of active cyber training projects
- Cyber Training Modernization Documentation Package:
- Cyber training alignment assessment
- Deployment configuration recommendations
- Cyber Range operations and safety compliance evaluation

Distribution Statement A. Approved for public release: distribution is unlimited

4.4. PL TSO Task Areas

4.4.1. Quality Assurance, Monitoring, and Relocations

The contractor shall manage other contract Quality Assurance Surveillance Plans (QASPs), coordinate TADSS relocations, and track upgrade schedules for all devices. The contractor shall monitor contractor performance and report feedback to appropriate USG representatives to ensure compliance with quality standards. The contractor shall support the development and delivery of Technical Oversight Representative (TOR) training and ensure timely reporting in support of USG COR monthly requirements. The contractor shall resolve TOR reporting deficiencies and provide recommendations for improvement. Support periodic reviews, inspections, and feedback from stakeholders regarding performance of the contractor performing maintenance and training support activities. The contractor shall provide direct input regarding the following criteria on other vendor's contracts:

- Timeliness of deliverables
- Accuracy and quality of documentation
- Effectiveness of recommendations and solutions
- Compliance with applicable regulations and standards

4.4.2. Knowledge Management

The contractor shall develop and maintain a Government-approved taxonomy for documentation and ensure proper organization and accessibility of data. The contractor shall utilize Microsoft 365 tools to ensure PdMs/PdLs have access to authoritative data and find/execute efficiencies to reduce tasking burdens.

4.4.3. Flight School Support at Fort Rucker. Aviation Training Analysis and Support

The contractor shall as a minimum, these tasks require specific experience with US Army rotary wing aviation training methods, tasks, doctrine, tactics, techniques, and procedures; familiarity with US Army Aviation regulations, aircraft specific technical publications, ancillary aircraft specific weapons and survivability equipment, communications systems, and mission planning. Product Coordination and Support (Utility/Cargo, Attack/Reconnaissance, Training Helicopter) tasks are largely identical across the three helicopter product categories, differing mainly in the type and number of simulators. These tasks require specific aircraft experience in fielded US Army Rotary Wing Aircraft (UH-60M/CH-47F/AH-64E/LUH-72A). These tasks are directly supported by the experience as noted in category Aviation Training Analysis and Support. Both forms of support provide simultaneous support for ongoing upgrades and fielding of helicopter training simulators.

4.5. PL IPO Task Areas

For successful execution of International Programs tasks, a broad range of knowledge, skills, and capabilities to include, case development, international agreements, finance,

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

resourcing, development of Requirements Packages, coordination on acquisition work, P&A development, Acquisition Strategy development activities, airworthiness release execution, and quality control. International acquisition processes follow established methodologies, and some have commonality with domestic programs. However, each process and work package has a different international customer, each with unique requirements and restrictions. The contractor shall consider the source of requirements in conjunction with applicable US law, policy, and regulation for all efforts executed by IPO. Specific countries supported will be provided in RFP for travel planning purposes.

In addition to the common requirements defined in section 3, the contractor shall provide unique FMS acquisition engagement, complying with US export control, international agreements, and security requirements to include the following tasks comprising the FMS lifecycle.

4.5.1. FMS Case Development and Management Support

The contractor shall provide the following unique task area capabilities:

- Analyzing draft LORs
- Preparation and submission of P&A estimates for training systems, manpower/travel budgetary estimates
- Analyzing draft LOA within the Defense Security Assistance Management System (DSAMS)
- Providing FMS Financial oversight through the lifecycle of a case, which includes obligation, closeout, and case reconciliation within the Government financial systems
- Interfacing with Office of the Secretary of Defense, Defense Security Cooperation Agency (DSCA), USASAC, and Deputy Assistant Secretary of the Army for Defense Exports and Cooperation (DASA (DEC)) staff and other Army Security Assistance Enterprise entities

4.5.2. Security Cooperation Support

The contractor shall provide the following unique task area capabilities:

- Analysis of military product and service requirements in the form of LORs, LOAs, Initial Capabilities Documents, Capability Development Documents, Capability Production Documents, Technical Direction Letters, Technical Direction Plans or other customer generated requirements documents
- Engaging with Office of Defense Cooperation (ODC) personnel at United States Embassies across the Area of Responsibility (AOR) coordinating site visits, delivery of materiel, inquiries, LORs, LOAs and technical questions
- Analysis of military operational requirements and examine the foreign military sales requirements as they compare to fielded program capabilities and recommend cost-effective FMS implementation aligning with their requisite life cycle management support, focusing on Operational Tempo (OPTEMPO)

Distribution Statement A. Approved for public release: distribution is unlimited

4.5.3. Acquisition Planning and Execution Support

The contractor shall provide the following unique task area capabilities:

- The contractor shall support defining and managing case and contract schedules/timelines, to include the labor hour plan that was built to support the unique case requirements in accordance with the eSAMM

4.5.4. Export Control and Compliance and International Agreements Support

The contractor shall provide the following unique task area capabilities:

- Staffing and responding to requests for review of industry export licenses for military and dual use commodities
- Liaison with key case and program stakeholders by attending conferences, Trade Shows, and attending quarterly meetings with foreign customers, United States Embassies, other officials, and groups, that are centered around FMS activities
- Tracking, analyzing, and providing expert advice on a full range of operational and policy issues of foreign military sales requirements of the U.S. and its partner nations
- Coordination, preparation, and review of documentation the Army Security Assistance Enterprise (ASAE) to support and defend positions on specific program matters
- Development, staffing and execution of International Armaments Cooperation (IAC) agreements in support of Security Cooperation activities. Agreements to include but not limited to Memorandums of Agreement/Understanding (MOA/Us), Project Arrangements (PAs), Department of Defense Support Agreements (DD Form 1144), Information Exchange Program (IEP) Annexes, and Personnel Exchange Programs (PEPs)

4.5.5. International Requirements Analysis and Validation

The contractor shall provide the following unique task area capabilities:

- Military expert Technical Review of country provided documentation and acquisition packages
- Requirements traceability to current foreign and domestic doctrine and regulations, with emphasis on military employment tactics
- Technical specification validation against Master Gunner qualification standards
- Implementation feasibility assessment based on operational field conditions
- Recommended adjustments to ensure operational effectiveness in training environments
- Analysis Report Documentation Packages
- Current doctrine alignment assessment for multi-domain training systems, incorporating tactical employment principles
- Technical performance parameters for TADSS implementation
- Deployment configuration recommendations based on operational requirements and field employment considerations

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

4.5.6. International Testing Support

The Contractor shall deliver comprehensive test support documentation including:

- Test criteria based on operational requirements and tactical employment scenarios
- Performance evaluation metrics derived from military qualification standards
- Acceptance test procedures that validate requirements, to include training effectiveness
- Results analysis and recommendations reflecting operational employment considerations.

4.5.7. International Programs Training Requirements

- Completion of security cooperation-specific training

5. TECHNICAL TASK AREAS

The contractor shall provide the technical services to support the Government's programs in section 1.4 above and manage the task backlog in accordance with section 3.2 above. The contractor shall manage and execute tasks within the following functional buckets:

5.1. Cloud Administrator

- Maintain availability of Cloud-IL5, IL6 and IL7, DEV, TEST, and PROD environments.
- Administer cloud-native services, container repositories, compute galleries and messaging frameworks.
- Monitor and maintain system health using modern tools.
- Ensure rapid restart and recovery of cloud services during exercises or outages, following a deployment methodology and Infrastructure as Code (IaC).
- Implement Infrastructure as Code (IaC) for consistent provisioning.
- Support CI/CD pipelines and automated deployment and rollback.
- Integrate security automation into cloud operations.
- Package and orchestrate services using modern toolsets.
- Maintain version control and collaboration.
- Ensure compliance with DoW cybersecurity standards, including ATO/cATO, RBAC, and STIG validation.

5.2. Cloud Architecting

The contractor shall provide the following support:

- Review relevant cloud strategy and adoption plans.
- Draft the organization's overarching cloud strategy to include the adoption of public, private, or hybrid cloud models.
- Assess requirements to determine where cloud solutions can add the most value.

Distribution Statement A. Approved for public release: distribution is unlimited

- Draft a scalable and secure cloud reference architecture to account for performance, scalability, security, and integration with existing systems.
- Oversee the migration of applications and data from on-premise infrastructure to the cloud.
- Define cloud specific policies and best practices for identity and access management (IAM), data privacy, network security, and compliance with industry regulations.
- Evaluate infrastructure costs by monitoring resource usage, managing cloud budgets, and identifying areas for optimization without compromising performance.
- Work closely with other teams, including DevSecOps, developers, and security specialists, to ensure seamless integration of cloud solutions.
- Research new technologies, industry trends, and vendor offerings to keep cloud strategy modern and competitive.

5.3. Combat Training Center (CTC) Engineering

The contractor shall provide the following support:

- Perform technical analysis of CTC Training Systems
- Draft technical estimates and resource loaded project schedule for CTC efforts
- Document technical CTC requirements to meet use case requirements
- Perform analysis on existing CTC solutions and interface control documents
- Decompose and specify CTC technical performance parameters for new use cases
- Review and provide analysis on CTC test procedures to ensure compliance
- Analyze CTC acceptance criteria and data collection methodology
- Analyze power and infrastructure needs, including electrical grids, backup systems, ensuring continuous operations of telecommunication equipment, workstations, base stations, and data systems.
- Provide Compliance assessment and deficiency identification of product drawings, interface control documents, engineering change proposals, trainer facilities report, acquisition documentation, software design description and technical manuals
- Perform Radio Frequency (RF) propagation studies to model signal behavior in OCONUS environment to ensure adequate coverage across training environment
- Review and refine network drawings for communications infrastructure, encompassing voice, video, and data subsystems
- Coordinate with spectrum management authorities to review and approve frequency allocations, ensuring compliance with local/international telecommunication regulations and deconflicting with local civilian and military spectrum usage
- Incorporate cybersecurity analyses to protect instrumentation networks from threats
- Provide analysis of CTC GFE and GFI

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Provide technical analysis and meeting support including system requirements reviews, preliminary design reviews, critical design reviews, Program Increment & Sprint planning sessions, and sprint demos
- Track contractor's story points throughout development
- Plan and review network testing for latency, reliability, and accuracy across the instrumentation system
- Support Government Acceptance Testing
- Support interoperability testing with partner's existing military systems, verifying compatibility with external systems
- Support On-Site Acceptance Testing
- Support Physical Configuration Audits

5.4. Configuration Management Engineering

The contractor shall provide the following support:

- Reframe existing CM focus areas into the three integrated CM functions of 1) CM Planning & Baseline Control, 2) CM Change & Configuration Control, and 3) CM Information Management & Assurance. All CM activities shall be performed within this framework.
- CM Planning & Baseline Control: Encompasses CM Process Development, Baseline Definition, CM Planning & Resource Allocation, Performance Measurement, and initial Requirements Traceability. This function focuses on establishing the CM framework and maintaining stable baselines.
- CM Change & Configuration Control: Integrates Identification & Control, Change Management, and ongoing Requirements Traceability. This function focuses on managing changes to the configuration and ensuring accurate tracking of all items.
- CM Information Management & Assurance: Combines Information Management & Access, Verification & Audit, and Data Archiving. This function focuses on maintaining data integrity, security, and accessibility.
- Implement a robust Role-Based Access Control (RBAC) system within the integrated CM database. Specific roles (e.g., Configuration Manager, Change Requestor, Auditor) shall be defined with corresponding access privileges. All access to CM data shall be governed by this RBAC system.
- Integrate CM processes directly into the DevSecOps pipeline. CM tasks, including baseline updates, change control, and configuration auditing, shall be automated as part of the CI/CD (Continuous Integration/Continuous Delivery) process.
- Develop and enforce a standardized CI taxonomy to ensure consistent identification and tracking of system components.

5.5. Cybersecurity Engineering

The contractor shall provide the following support:

- Provide expertise on the Risk Management Framework (RMF) implementation
- Provide expertise in secure software development practices

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Provide expertise on adherence to Army Cybersecurity policies and procedures.
- Identify, assess, and prioritize system vulnerabilities.
- Support regular scanning, manual penetration tests to simulate attacks, and managing the patching process to fix weaknesses and vulnerabilities.
- Prepare for, respond to, and recover from cyber incidents.
- Analyze malware, conduct forensic investigations to determine the cause and scope of a breach, and develop mitigation strategies to prevent future attacks.
- Evaluate systems include robust firewalls, secure cloud environments, and adhere to the DoW's security architecture standards.
- Manage system accreditations and ensuring proper data handling.
- Provide expertise in designing systems to withstand and recover from cyberattacks with minimal impact on mission-critical functions.

5.6. Data Engineering

The contractor shall provide the following support:

- Develop and maintain data pipelines for mission-critical data.
- Ensure compliance with stringent security and access protocols by enforcing robust access controls, encryption standards, and data governance policies to prevent unauthorized access and maintain data integrity.
- Build and deploy machine learning models for predictive analysis.
- Create models to predict a wide range of outcomes, including equipment failures (predictive maintenance), adversary behavior, and training effectiveness
- Use machine learning, deep learning, and natural language processing to analyze vast amounts of data from diverse sources to identify patterns and trends.
- Create interoperable data ecosystems that can operate across all military domains—air, land, sea, space, and cyber by moving toward a unified, data-driven operational picture.
- Develop data models and architectural standards for training systems by defining standards for metadata, data lineage, and integration strategies across multiple, often disparate, systems.
- Implement data validation and quality assurance.
- Provide data for senior leader decision support including visualizations, dashboards, and reports that translate complex data analysis into actionable insights for senior leaders.
- Continuously research and integrate new tools in AI/ML, cloud computing, and big data.

5.7. DevSecOps Engineering

The contractor shall provide the following support:

- Integrate automated security checks and scans into every stage of the Continuous Integration/Continuous Delivery (CI/CD) pipeline.
- Enforce and automate compliance with DoW regulations.

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Secure and harden containerized applications by ensuring containers are built with minimal components and are regularly scanned for vulnerabilities throughout their lifecycle, following DoW-specific hardening guidelines.
- Implements secure secrets management solutions to prevent credentials from being hard-coded or exposed in the pipeline or application.
- Vet and monitor all third-party components, open-source libraries, and dependencies used in applications.
- Automate the generation and monitoring of Software Bill of Materials (SBOMs) to provide transparency and ensure no vulnerable components enter the system.
- Automate monitoring and incident response by setting up automated monitoring and alerting for security-related events and vulnerabilities in production.
- Promote secure coding practices, provide security training, and fosters collaboration between developers, operations, and security teams.
- Work toward moving from a manual, point-in-time ATO process to a continuous one.

5.8. Enterprise Architecting

The contractor shall provide the following support:

- Document and model the enterprise architecture based on the specific viewpoints (e.g., operational, systems, and services) defined in the DoDAF or relevant standard.
- Ensure interoperability for military standards to ensure that systems can exchange information and operate together seamlessly across all military domains (air, land, sea, space, and cyber).
- Translate mission requirements into an enterprise architecture by understanding strategic organizational objectives and translating them into a coherent enterprise architecture.
- Informs long-term planning, programming, and budgeting decisions to ensure technology investments directly support the mission.
- Enforce robust cybersecurity and compliance by integrating security into the architecture from the outset and ensuring compliance with the Risk Management Framework (RMF), Zero Trust strategies, and other DoW cybersecurity regulations.
- Create and enforce standards for data management to allow for a "federated" approach to architecture.
- Enables the reuse and sharing of architectural data across different communities of interest (COIs) while maintaining strict security and access controls for classified information.
- Evaluate and recommend emerging technologies.
- Continually research and assess new advancement in technologies like AI, machine learning, and digital engineering.
- Evaluate the potential applications and risks of new technologies

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Guide leadership on strategic technology adoption to maintain the technical advantage.
- Ensure architectural documentation is created to support the system's lifecycle and that the system aligns with the broader DoW enterprise architecture before, during, and after procurement.
- Create the strategic roadmaps for moving from legacy "as-is" architectures to more modern, integrated "to-be" environments.

5.9. Geospatial Data Engineering

The contractor shall provide the following support:

- Oversee automated workflows to ingest, process, and transform massive volumes of geospatial data from diverse sources, including satellite imagery, unmanned aerial vehicles (UAVs), and ground-based sensors including imagery, vector data, and tabular location data.
- Oversee the construction, integration, and maintenance of large-scale, highly available databases.
- Oversee the processing and normalization of multi-source geospatial data.
- Apply strict DoW security protocols, including encryption, access controls, and data segregation, to protect highly sensitive geospatial data and ensure processes are compliant with the Risk Management Framework (RMF) and other security directives.
- Develop geospatial data products for visualization and decision support.
- Support AI/ML applications using geospatial data.
- Ensure data interoperability across systems and agencies.
- Oversee the automated data extraction from reconnaissance and imagery.
- Manage and maintain cloud-based storage and processing platforms for large-scale geospatial data.
- Geospatial data management, terrain production, and integration with and for training systems.
- Optimize geospatial data for visual and sensor views.
- Provide quality assurance and testing of terrain databases.

5.10. Information Systems Security Manager

The contractor shall provide the following support:

- Advise senior management (Chief Information Officer [CIO]) on risk levels and security posture.
- Advise appropriate senior leadership or Authorizing Official of changes affecting the organization's cybersecurity posture.
- Ensure that security improvement actions are evaluated, validated, and implemented as required.
- Identify Information Technology (IT) security program implications of new technologies or technology upgrades.

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Provide leadership and direction to IT personnel by ensuring that cybersecurity awareness, basics, literacy, and training are provided to operations personnel commensurate with their responsibilities.
- Oversee the information security training and awareness program.
- Guide IT and cybersecurity personnel in implementing security measures, fostering a culture of cybersecurity awareness and accountability.

5.11. Information Systems Security Officer

The contractor shall provide the following support:

- Participate in continuous monitoring activities to ensure systems remain compliant with DoW cybersecurity requirements throughout their lifecycle.
- Continuously monitor the security posture of assigned systems, ensuring compliance with DoW policies, directives, and cybersecurity standards.
- Assist in the implementation and validation of security controls as outlined in the system's Security Plan (SP) and ensure they are functioning as intended.
- Perform regular vulnerability scans and assessments using approved tools (e.g., ACAS) to identify and mitigate risks to DoW systems.
- Develop, update, and maintain system authorization documentation, including the System Security Plan (SSP), Plan of Action and Milestones (POA&M), and Risk Assessment Reports.
- Assist in the investigation, documentation, and resolution of cybersecurity incidents, ensuring proper reporting to the ISSM and higher authorities.
- Ensure systems comply with DoW cybersecurity standards, including STIGs (Security Technical Implementation Guides), NIST 800-53, and other applicable frameworks.

5.12. Live Collective Aviation Engineering

The contractor shall provide the following support:

- Perform technical analysis of Live Collective Aviation Training Systems and Tactical Engagement Simulation System (TESS)
- Draft technical estimates and resource loaded Project Schedules
- Document TESS requirements to meet use case requirements
- Perform analysis on aircraft interface control documents
- Decompose and specify TESS technical performance requirements for new use cases
- Review and provide analysis on TESS test procedures to ensure compliance
- Analyze TESS acceptance criteria and data collection methodology
- Compliance assessment and deficiency identification of product drawings, interface control documents, engineering change proposals, trainer facilities report, software design description and technical manuals
- Analysis of Radio Frequency based communication networks that support TESS in the Continental United States (CONUS) and Outside the Continental United States (OCONUS).

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Analysis of the aircraft platform's GFE and GFI to support TESS integration
- Document TESS performance requirements specific to configured aircraft
- Draft and evaluate technical specifications for TESS to meet requirements
- Technical analysis at Milestone Events (System requirements reviews, preliminary design reviews, critical design reviews)
- Support Program Increment & Sprint planning sessions
- Provide technical analysis of sprint demos
- Track contractor's story points throughout development
- Support of Hardware and Software TESS Integration Testing
- Support Formal Qualification Testing
- Support Government Acceptance Testing
- Support On-Site Acceptance Testing
- Support Physical Configuration Audits

5.13. Network Engineering

The contractor shall provide the following support:

- Network design, implementation, and troubleshooting.
- Analysis and support of networking protocols and security standards.
- Certification expertise with CompTIA Network+ or equivalent.
- Design, implement, and maintain network infrastructure, along with troubleshooting network issues and ensure network security.
- Supporting IT infrastructure design, including servers, storage, and virtualization technologies.
- Troubleshoot issues and ensure system availability.
- Support connecting to the Department of Defense Information Network (DODIN) and its various components, such as the Secret Internet Protocol Router Network (SIPRNet) for classified data and the Non-classified Internet Protocol Router Network (NIPRNet).
- Ensure compliance with cybersecurity and DISA standards including implementing DISA's Security Technical Implementation Guides (STIGs) and complying with the Risk Management Framework (RMF).
- Perform network hardening and penetration testing. A key task involves securing network devices, such as routers, switches, and firewalls, to protect against cyber threats. Engineers also conduct vulnerability scans and manual penetration tests to find and fix weaknesses before adversaries can exploit them.
- Implement and manage various network security technologies, including VPNs, intrusion detection/prevention systems, and cryptographic to secure data in transit.
- Use automation and scripting tools to develop and deploy configurations for systems and network infrastructure consistently and efficiently.
- Conduct network performance monitoring and optimization.
- Assist in evaluating and migrating from legacy systems to more modern solutions.

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Develop and maintain detailed network diagrams, configuration baselines, and technical procedures for continuity, accreditation, and troubleshooting.
- Troubleshoot and resolve network-related problems
- Diagnose hardware, software, and configuration issues that affect mission effectiveness.

5.14. Process Improvement Engineering

The contractor shall provide the following support:

- Prioritize automation investments based on a cost-benefit analysis.
- Analyze current workflows, identify inefficiencies, and implement improvements to streamline processes. Create systems where data is entered once and then propagate across all relevant systems or modules, reducing redundancy and errors.
- Ensure that data extraction processes are optimized for speed and accuracy.
- Utilize appropriate capabilities such as Visual Basic and C# for designing and implementing database architectures.
- Create seamless data integration between the Project IMS (Integrated Master Schedule) and Power BI. Ensure that data flows correctly and is structured for visualization and analysis in Power BI.
- Create visually appealing and informative charts in Power BI. Follow best practices for UI/UX to ensure the charts are intuitive and user-friendly.
- Use data to define the scope, objectives, and metrics for specific improvement projects that are strategically aligned with the organization's broader goals, ensuring that improvement efforts have a meaningful impact on mission readiness and cost savings.
- Utilize process improvement methods to identify and eliminate non-value-added activities or "waste" from processes.
- Lead rapid improvement events to engage cross-functional teams in hands-on problem-solving to quickly implement small, targeted improvements that yield immediate results and build a culture of continuous improvement.
- Perform detailed Root Cause Analysis to uncover the underlying causes of process problems.
- Collect and analyze data on key performance indicators (KPIs) to track the success of implemented changes.
- Develop and maintain custom applications using Microsoft Power Apps to automate workflows, enhance data integration, and improve user experience.
- Leverage Microsoft Power Apps to create intuitive, scalable solutions that align with process improvement goals, ensuring seamless integration with existing systems such as Power BI and Project IMS.

5.15. Requirements Engineering

The contractor shall provide the following support:

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Develop, analyze, and manage system requirements.
- Familiarity with DoW requirements processes (CDD, CPD).
- Familiarity with Other Transaction Authorities (OTA), Middle Tier of Acquisition (MTA) and Major Capability Acquisition (MCAs) processes.
- Maintain concurrency on evolving requirements processes.
- Ensure requirements traceability and compliance
- Translate capability gaps into technical requirements: The engineer works within the JCIDS process to take high-level capability needs identified by military combatant commanders and convert them into detailed, measurable technical requirements for a new system.
- Conduct requirements analysis: They analyze, decompose, and define system-level requirements to ensure they are complete, consistent, and feasible. This involves a rigorous process to break down high-level needs into detailed specifications for hardware, software, and other system components.
- Manage requirements throughout the acquisition lifecycle: The engineer uses requirements management software, such as IBM Rational DOORS, to create, organize, and maintain all requirements. This ensures the requirements are controlled and updated as the program progresses through its development phases.
- Perform bidirectional traceability: A critical task is linking each requirement to its source (e.g., a JCIDS document) and tracking its implementation, verification, and validation in test plans and system designs. This ensures that every component and test case maps back to an original need.
- Coordinate with stakeholders and manage interfaces: The engineer works across multiple stakeholders, including acquisition program offices, designers, testers, and end-users (the warfighter). They manage interface requirements between different systems, ensuring they can interoperate seamlessly.
- Support program reviews and milestone decisions: The requirements engineer provides the necessary documentation and evidence for major program reviews, such as the System Requirements Review (SRR). Their work demonstrates that the program's technical plan is sound and that requirements are achievable within budget and schedule.
- Support verification and validation (V&V) activities: They define the methods and criteria for testing and evaluation. The engineer ensures that verification activities prove the system meets its technical requirements ("building the product right"), and validation activities confirm it meets the operational needs ("building the right product").
- Manage requirement changes: When a requirement must be modified, the engineer manages the change control process, ensuring the impact is analyzed, documented, and approved by all relevant stakeholders. This prevents unmanaged "scope creep" and avoids costly program delays.
- Develop objective evidence for compliance: All aspects of requirements engineering must be documented as auditable evidence. This is crucial for

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited
demonstrating compliance with DoW acquisition policy and for successfully receiving an Authority to Operate (ATO) from cybersecurity authorities.

- Conduct and assess system impacts of trade-off studies and analyze the system-level impact of any proposed changes to requirements. This ensures that modifications do not negatively affect other system functions or military capabilities

5.16. Radio Frequency/Communications Engineering

The contractor shall provide the following support:

- Design and develop advanced RF systems and subsystems. RF engineers create the architecture for hardware components, such as antennas, transmitters, receivers, and amplifiers, for a wide range of military platforms, from tactical vehicles to aircraft and satellites.
- Engineer systems for Electronic Warfare (EW). This involves designing electronic countermeasures (ECM) to disrupt or jam adversary signals and developing systems for electronic support (ES) to detect and locate threats. Engineers evaluate next-generation EW systems and design methods to defeat wireless threats.
- Perform RF analysis and modeling. Using tools like MATLAB and HFSS, engineers analyze and simulate RF system performance to predict how signals will propagate, evaluate a system's robustness to interference, and ensure performance meets mission requirements.
- Test and validate RF hardware. Engineers use advanced test equipment like spectrum analyzers, signal generators, and oscilloscopes to test and troubleshoot RF hardware in laboratory and field environments. This verifies that new designs meet performance specifications and military standards.
- Support radar and satellite communications (SATCOM). RF engineers contribute to the development of military radar systems and design resilient satellite communications systems. This includes performing link budget analysis, managing spectrum use, and ensuring secure, reliable connectivity for joint and naval operations.
- Conduct RF signature analysis for survivability. For military aircraft and other platforms, engineers analyze and optimize the RF signature (e.g., radar cross-section) to reduce visibility to enemy systems. This involves both modeling and collaborating on design features like specialized materials.
- Ensure compliance with military and federal standards. Engineers must stay current with strict DoW standards and federal regulations for radio equipment, such as those from the Federal Communications Commission (FCC). For example, they may perform engineering analysis on requests for military spectrum use within national airspace.
- Reverse engineer and analyze wireless devices. This task, often associated with special operations or intelligence missions, involves performing tear-down analyses and reverse engineering adversary wireless devices to understand their capabilities and develop effective countermeasures.

Distribution Statement A. Approved for public release: distribution is unlimited

- Translate mission needs into technical specifications. RF engineers collaborate with military stakeholders to convert operational and mission requirements into practical system concepts and performance specifications. This ensures that new systems directly address military capability gaps.
- Provide subject matter expertise and support. RF engineers serve as technical experts on project teams, at labs, or for deployed units. They provide guidance during design reviews, support troubleshooting in the field, and develop technical documentation for RF systems throughout their lifecycle

5.17. Safety Engineering

The contractor shall provide the following support:

- Evaluating safety requirements.
- Participating in safety reviews.
- Assess design safety.
- Analyze system functions, software logic, and hardware interfaces to identify potential hazards and their causes.
- Quantify and categorize the risks associated with identified hazards to support informed decision-making. Before exposing personnel or equipment to known risks, the engineer ensures that the appropriate authority has formally accepted those risks.
- Influence system design throughout the life cycle: The engineer works with program managers and systems engineers to "build safety in" from the ground up, rather than adding it as an afterthought. This involves integrating safety features into the design during research, development, and testing.
- Manage hazard tracking and documentation: They develop and maintain a Hazard Tracking System (HTS) to document the status of identified hazards, including mitigation strategies, risk assessments, and closure actions. This provides an audit trail for the entire life cycle of the system.
- Review and approve safety-critical documentation: The engineer prepares and presents system safety documents, such as Safety Assessment Reports (SARs) and Safety Case Reports, for review by program offices and independent safety boards. This documentation is critical for system certification and fielding.
- Investigate accidents and mishaps: When incidents occur, the safety engineer assists or leads investigations to determine the root cause. They analyze data, interview witnesses, and make recommendations for design changes or operational procedures to prevent similar incidents in the future.
- Address software system safety: With the increasing complexity of software, engineers focus on ensuring that software does not contribute to system mishaps. This involves analyzing software functions, verifying safety-critical code, and integrating software safety into the overall system safety process.
- Evaluate facilities and explosives safety: For facilities that handle hazardous materials, ammunition, and explosives, the safety engineer performs surveys to

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited
ensure compliance with stringent DoW regulations. They design and site facilities, review construction plans, and evaluate the safe storage and handling of explosive materials.

- Support environmental and occupational health (ESOH): This involves evaluating and mitigating health and environmental hazards related to the system. Tasks include managing hazardous materials, controlling toxic waste remediation, and ensuring compliance with regulations like the National Environmental Policy Act (NEPA).
- Validate safety through test protocols: The engineer designs test procedures to verify that safety features are effective. They evaluate test results and analyze how the system performs under various conditions to validate its overall safety before it is deployed to military personnel.

5.18. Software Engineering

The contractor shall provide the following support:

- Software development, testing, and integration along with familiarity in relevant programming languages and software development methodologies.
- Develop and maintain software components, participate in software testing, and integrate software with hardware systems.
- Develop and deliver mission-critical software: Software engineers build applications that directly support military operations, intelligence gathering, and logistics. These systems are integral to every DoW platform, from advanced fighter jets to autonomous systems and command-and-control networks.
- Integrate robust cybersecurity throughout the lifecycle: This task is central to all DoW software development. Engineers write secure code and perform automated security scans within the development pipeline, following DoW standards like the Risk Management Framework (RMF) and DISA's Security Technical Implementation Guides (STIGs).
- Utilize Agile and DevSecOps methodologies: The DoW has shifted from traditional "waterfall" development to modern, iterative approaches like Agile and DevSecOps. Software engineers use these frameworks to continuously and rapidly deliver high-quality software, responding quickly to warfighter needs and emerging threats.
- Work with embedded and real-time systems: A significant amount of DoW software runs on embedded systems for hardware like sensors, weapons, and aircraft controls. The engineer must develop software that operates reliably in real-time, often in resource-constrained and high-stakes environments.
- Build and maintain continuous integration/continuous delivery (CI/CD) pipelines: They help automate the build, test, and deployment process by managing CI/CD pipelines. This allows the DoW to push security patches and new features out quickly and consistently, which is crucial for modernizing legacy systems and maintaining a constant defensive posture.

Distribution Statement A. Approved for public release: distribution is unlimited

- Ensure compliance and manage accreditation processes: DoW software must be continuously accredited to operate on secure networks. The software engineer's work contributes to maintaining a continuous Authority to Operate (cATO) by generating auditable artifacts and ensuring security controls are properly implemented.
- Conduct verification and validation (V&V): They create and execute test plans to ensure the software not only meets its technical requirements but also functions correctly in an operational context. This often involves rigorous testing and verification of safety-critical functions.
- Collaborate with multidisciplinary teams: Software engineers work closely with systems engineers, hardware developers, cybersecurity specialists, and end-users (the warfighter). This requires strong communication skills to translate complex mission requirements into technical solutions.
- Develop and secure cloud-native applications: As the DoW increasingly moves to the cloud, engineers must develop software that leverages cloud platforms like AWS and Azure while adhering to stringent security requirements. This includes using hardened container images and automated scanning.
- Maintain and modernize legacy systems: A large amount of military software consists of legacy codebases. Engineers are responsible for refactoring and upgrading these systems, a challenging task that requires deep technical knowledge and careful planning to ensure mission continuity.

5.19. Systems Architecting

The contractor shall provide the following support:

- Use the DoDAF to develop and document architectures. A primary task is to create detailed architectural descriptions using the DoD Architecture Framework (DoDAF), which provides standardized models for visualizing and understanding complex defense systems. This includes creating operational views (OV), systems views (SV), and service views.
- Translate mission requirements into system architecture. The systems architect converts military mission needs and capability gaps identified through processes like the Joint Capabilities Integration and Development System (JCIDS) into a functional and technical architecture that defines system design and component interactions.
- Design and integrate complex systems of systems (SoS). A DoW systems architect often works on a very large scale, designing how multiple individual systems—such as command-and-control networks, sensor platforms, and weapons systems—will be integrated to function as a single, coherent capability. This is critical for achieving multi-domain battlespace integration.
- Ensure interoperability and standardization. They define interface specifications and ensure that different systems can communicate and exchange data seamlessly. By enforcing technical standards and protocols, they guarantee

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited
interoperability among military branches and allied forces, which is essential for joint operations.

- Conduct model-based systems engineering (MBSE). The architect uses modeling languages like SysML and tools like Cameo to create digital models of the system. This allows for rigorous analysis, simulation, and verification of the system's structure and behavior early in the design process, reducing risks and costly changes later.
- Assess and mitigate system risks. They perform risk assessments to identify potential vulnerabilities, single points of failure, and security weaknesses in the system's design. This leads to the development of mitigation strategies to ensure the system is resilient and secure against a wide range of threats.
- Support development through the entire acquisition lifecycle. The systems architect remains engaged with the program from concept development to fielding. They provide technical guidance to multidisciplinary teams, including software engineers, hardware designers, and testers, to ensure the implemented system aligns with the architectural vision.
- Evaluate new technologies for mission impact. As technology evolves rapidly, the architect evaluates emerging technologies—like AI, cloud computing, and advanced networking—for their potential to address mission needs. They develop strategic roadmaps and plans for incorporating these new capabilities responsibly.
- Present and communicate the architectural vision. They create and deliver presentations that clearly explain the system's design, capabilities, and strategic value to senior military leaders and other key stakeholders. This ensures that complex technical concepts are understandable for decision-makers.
- Validate system performance and compliance. Working with test and verification teams, the architect validates that the system's performance meets all non-functional requirements, including security, scalability, and reliability. They ensure the system complies with all relevant defense standards and regulations.

5.20. Technology Integration Engineering

The contractor shall provide the following support:

- Define and manage system interface requirements. TIEs analyze and translate military operational needs into specific technical interface requirements. They work with stakeholders from different departments and agencies to ensure data exchange standards are defined and met, allowing new and existing systems to communicate seamlessly.
- Conduct integration and interoperability testing. The engineer develops and executes rigorous test plans to verify that integrated systems function as intended and comply with DoW standards. This includes testing hardware, software, and subsystems in integrated test environments to validate their compliance with military directives.
- Support hardware and software integration. TIEs are hands-on in the lab, configuring and testing systems to ensure that new software and hardware

Distribution Statement A. Approved for public release: distribution is unlimited

components are properly integrated and that existing systems remain stable. This involves loading custom software, installing hardware, and verifying that all components work together effectively.

- Troubleshoot and resolve technical issues. When issues arise during or after integration, the TIE must diagnose and resolve the problems. This requires strong problem-solving skills to manage complex technical issues under pressure, ensuring that integrated systems operate efficiently and reliably.
- Develop technical documentation. The engineer creates and maintains detailed documentation, including system configurations, integration processes, and troubleshooting procedures. This is crucial for knowledge transfer, long-term system sustainment, and to support rigorous DoW audit and accreditation requirements.
- Ensure compliance with DoW security standards. Cybersecurity is embedded in the integration process. TIEs ensure that system integrations adhere to DoW security requirements, including managing access controls, securing data flows, and implementing technologies like encryptors and firewalls to protect sensitive information.
- Support rapid capability development and fielding. Working within agile frameworks, TIEs help rapidly acquire, integrate, and field new technologies to address urgent warfighter needs. They are instrumental in bringing emerging technologies, such as AI or unmanned systems, into operational use quickly and securely.
- Collaborate with cross-functional teams. Integration is a collaborative effort. TIEs act as a key liaison between various groups, including software developers, hardware engineers, testers, and government stakeholders. They must effectively communicate complex technical concepts and manage expectations to ensure successful integration projects.
- Support modeling, simulation, and training environments. In modeling and simulation environments, TIEs integrate new capabilities to create realistic training and test environments for military personnel. This can involve integrating different systems and data to support training exercises and analyzing system performance.
- Manage configuration and baselines. The engineer maintains control over the hardware and software configuration of systems throughout their lifecycle. They monitor changes, manage assets, and maintain accurate documentation of system baselines to ensure functionality and support audit requirements

5.21. Test Engineering

The contractor shall provide the following support:

- Develop and execute integration and test plans
- Maintain familiarity with testing methodologies and tools.
- Analyze test results to identify and resolve defects.
- Develop Test and Evaluation (T&E) plans: The test engineer creates comprehensive T&E strategies and plans, including the Test and Evaluation

Distribution Statement A. Approved for public release: distribution is unlimited

Master Plan (TEMP). This documentation defines the overall testing approach, methodologies, resources, and schedules for a system's entire lifecycle.

- Execute Developmental Test and Evaluation (DT&E): The engineer conducts early-stage testing in labs and controlled environments to verify that a system meets its technical specifications and contractual requirements. This involves rigorous functional, performance, and regression testing.
- Support Operational Test and Evaluation (OT&E): They assist in planning and conducting tests in realistic operational environments to determine if a system is operationally effective, suitable, and survivable for its intended mission. This often involves coordinating with operational units and end users.
- Perform Cybersecurity Test and Evaluation: A key task is to test a system's cyber vulnerabilities by conducting penetration tests, vulnerability scans (e.g., using Nessus and NMAP), and implementing DISA Security Technical Implementation Guides (STIGs). The results support system accreditation under the Risk Management Framework (RMF).
- Analyze and report test results: The engineer collects, analyzes, and organizes vast amounts of test data to evaluate a system's performance against requirements. They produce formal test reports detailing findings, deficiencies, and recommendations for the program office and decision-makers.
- Design and develop automated test procedures: To ensure consistency and efficiency, test engineers create manual and automated test procedures and scripts. This includes integrating automated testing into Continuous Integration/Continuous Delivery (CI/CD) pipelines to support rapid software delivery.
- Support system integration and interoperability testing: The engineer performs testing to ensure that different hardware, software, and subsystems work together as intended. They also verify interoperability with other systems across the DoD Information Network (DODIN).
- Conduct root cause analysis (RCA) and troubleshooting: When tests fail, the engineer works with design and software teams to identify the root cause of the issue and aid in developing a solution. This often requires expertise in multiple engineering disciplines.
- Coordinate with external stakeholders: The test engineer acts as a liaison between the acquisition program office and various internal and external organizations, including developers, other DoW test agencies (e.g., JITC), and military units.
- Document test artifacts for auditing and accreditation: Throughout the testing process, they generate objective evidence to demonstrate compliance with all requirements. This documentation is critical for system certification, fielding decisions, and demonstrating accountability to regulatory bodies.

5.22. Virtual Aviation Engineering

The contractor shall provide the following support:

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Perform technical analysis of flight simulators
- Draft technical estimates and resource loaded Project Schedule for use cases
- Document technical flight simulator engineering requirements to meet use case requirements
- Perform analysis on flight simulator interface control documents
- Decompose and specify flight simulator technical performance requirements for new use cases
- Decompose and specify flight simulator visual performance requirements for new use cases
- Review and provide analysis on test procedures to ensure compliance
- Analyze acceptance criteria and data collection methodology
- Compliance assessment and deficiency identification of product drawings, interface control documents, engineering change proposals, trainer facilities report, software design description and technical manuals
- Market research of aviation simulation capabilities within industry
- Government Furnished Equipment (GFE) Analysis of Apache, Blackhawk, Chinook and other aviation platforms
- Government Furnished Information (GFI) Analysis of Apache, Blackhawk, Chinook and other aviation platforms
- Ensure acquisition documentation follows required Compliance
- Document flight simulator performance requirements specific configured aircraft
- Technical analysis at Milestone Events (System requirements reviews, preliminary design reviews, critical design reviews)
- Attend Program Increment & Sprint planning sessions
- Provide technical analysis of sprint demos
- Track contractor's story points throughout development
- Oversee the results of Hardware and Software Integration Testing
- Support the Government Acceptance Testing
- Support the On-Site Acceptance Testing
- Support the Physical Configuration Audits

5.23. Visual Engineering

The contractor shall provide the following support:

- Develop visual databases for flight and training simulators. Visual systems engineers create and integrate synthetic environments, including terrain databases, 3D models, and animations, into military training systems. These simulations provide realistic and effective training for warfighters.
- Integrate image generator and display systems. A core responsibility is to integrate hardware and software components, such as high-performance image generators, display projectors, and display systems (like collimated displays or back-projection screens), to ensure they function cohesively.

Distribution Statement A. Approved for public release: distribution is unlimited

Distribution Statement A. Approved for public release: distribution is unlimited

- Validate and test visual system performance. The engineer designs and executes test plans to verify that the visual systems meet stringent performance, accuracy, and latency requirements. They conduct acceptance testing procedures with the customer to ensure the system is ready for operational use.
- Engineer sensor simulation and correlation. For military simulations, visual systems must accurately mimic the data from real-world sensors, such as infrared (IR), night vision, and radar. The engineer ensures that the simulated visual environment is properly correlated with sensor output for realistic training.
- Design audiovisual (AV) systems for secure facilities. For command centers and intelligence facilities, visual systems engineers design and integrate AV and video teleconferencing (VTC) systems that adhere to strict DoW security protocols. This ensures secure and reliable communication for mission-critical decisions.
- Ensure compliance and manage configuration. Visual systems must meet military standards (MIL-STDs) and adhere to a controlled configuration. The engineer uses configuration management processes to ensure visual systems are properly maintained and documented throughout their lifecycle.
- Troubleshoot and resolve technical issues. Engineers are responsible for diagnosing and resolving complex technical issues with visual systems, image generators, and related hardware in a lab or field environment.
- Evaluate new computer and visual technology. They research and evaluate computer hardware, software, and display technology to ensure that visual systems can meet modern requirements for frame rate, realism, and memory. This helps keep military simulations at the leading edge of technology.
- Support system documentation and requirements management. A visual systems engineer helps to define, document, and manage system requirements throughout the development process. This includes drafting and reviewing engineering specifications and other documentation for technical procurement packages.
- Provide field support and technical guidance. Engineers may be required to travel to customer locations to support system installation, integration, and testing. They also provide ongoing technical expertise to help military personnel and contractors use and maintain the systems effectively.

6. TRANSITION IN

The contractor shall provide and implement a transition plan that ensures:

- Seamless transition from current support model to Agile Program Management Model
- Ensure continuity of operations
- Minimal disruption to mission execution
- Effective implementation of Agile methodologies

Distribution Statement A. Approved for public release: distribution is unlimited

7. TRANSITION OUT

- Data developed/collected during the performance of this contract will be delivered to the Government, to include a data dictionary (DI-MGMT-80897)

8. GOVERNMENT-FURNISHED EQUIPMENT AND INFORMATION

The Government will provide:

- Office space, as required, at:
 - Orlando
 - Germany
 - South Korea
 - Ft. Irwin, CA
 - Ft. Polk, LA
 - Ft. Eustis, VA
 - Ft. Rucker, AL
 - Ft. Bragg, NC
 - Ft. Drum, NY
 - Ft. Campbell, KY
- Access to required information systems
- Relevant program documentation
- Technical data and specifications
- Security cooperation information
- Access to stakeholders for Agile ceremonies and feedback

Distribution Statement A. Approved for public release: distribution is unlimited

VOLUME II - HEADQUARTERS (HQ) STAFF SUPPORT FOR ACQUISITION OF SERVICES FOR SIMULATION, TRAINING, TEST AND THREAT

Distribution Statement A. Approved for public release: distribution is unlimited

1. INTRODUCTION

1.1. Mission

The Capability Program Executive for Simulation, Training and Instrumentation (CPE STRI) is the Army's premier organization responsible for acquiring, delivering, and maintaining Test, Training, and Threat solutions to support both domestic and international Warfighters. With a portfolio of over 370 products deployed at more than 400 locations worldwide. CPE STRI ensures that statutory and regulatory testing and training requirements are met for Major Defense Acquisition Programs (MDAPs) (Abrams, Bradley, Stryker, Apache, Chinook, Black Hawk, etc.), partner nations, enabling the Combatant Commander's (COCOMs) and the Army Service Component Commander Theater Engagement Strategy.

CPE STRI operates under a mission to develop, deliver, and sustain cutting-edge capabilities that enhance readiness, interoperability, and operational effectiveness. Its Project Managers (PMs) and Project Leads (PLs) are tasked with driving innovation, ensuring compliance, and adapting to the Army's evolving needs. As the Army transforms to meet emerging threats and modernize its force, CPE STRI is committed to delivering agile solutions that align with the Army's modernization priorities and international security cooperation objectives.

1.2. Objective

This requirement reflects CPE STRI's commitment to transformation by adopting a task-based, outcome-focused, capability-centric, Agile Program Management approach that enables flexibility, responsiveness, and scalability. The contractor will play a critical role in supporting CPE STRI's mission by delivering specific, measurable results that ensure the success of testing, training, and threat capabilities for both domestic and international Warfighters. This is a mindset shift. Focus will be on task completion rather than staffing specific positions. Further, the contractor will provide the acquisition support services that are not resident within CPE STRI's Government acquisition workforce areas of expertise. The contractor will need to provide flexibility to surge unique and critical expertise. The intent of this effort is to provide the Government with highly specialized skills not easily sourced or cost effective within organic formations. The contractor will provide flexibility in execution as threats and priorities change. This is critical to the rapid and dynamic nature of the CPE STRI portfolio of systems. This shall provide CPE STRI the capability to adapt to the dynamic and unpredictable nature of multi-domain operations, technical evolutions in testing and training warfighter systems and disciplines.

1.3. Scope

The scope of this Performance Work Statement (PWS) is to define the acquisition support services and enabling capabilities required by the CPE STRI Headquarters (HQ) and Project Management Offices (PMOs) to effectively plan, execute, and manage a diverse portfolio of Training, Testing and Threat Acquisition Programs supporting the Department

Distribution Statement A. Approved for public release: distribution is unlimited of War and our Allied Partners. These services are essential to ensure timely, compliant, and mission-aligned procurement activities across CPE STRI's programs and initiatives.

The contractor shall provide focused acquisition support to enable delivery of foreign and domestic training, testing and threat systems in all phases of the acquisition lifecycle, including but not limited to requirements development, market research, acquisition strategy formulation, solicitation preparation, source selection support, contract administration and closeout activities. Support shall encompass a wide range of contract types and vehicles, including but not limited to firm-fixed-price, cost-reimbursement, indefinite delivery/indefinite quantity (ID/IQ), and other hybrid arrangements.

Services and enabling capabilities shall be tailored to meet the unique needs of CPE STRI's evolving mission. The contractor shall ensure that all acquisition support activities are executed in accordance with applicable Federal, Department of War, and Army acquisition regulations, policies, and best practices.

This effort includes acquisition expertise support to pre-award and post-award activities; the Planning, Budgeting, and Execution Process; Strategic Integration efforts; and spans across multiple program offices, functional areas, and stakeholder groups within and outside of CPE STRI. The contractor shall be capable of adapting to evolving mission requirements, emerging acquisition priorities, and dynamic funding environments, while maintaining a high standard of professionalism, responsiveness, acquisition and technical competence.

The current Directorates supported by this PWS include:

- Security Directorate – G2
- Operations Directorate - G3
- Product Support Directorate - G4
- Acquisition Directorate – G5
- Chief Information Office – G6
- Business Management Directorate – G8
- Army Contracting Command – Orlando (ACC-O)

1.3.1. Non-Personal Services

The Government will neither supervise contractor employees nor control the method by which the contractor performs the required tasks. Under no circumstances will the Government assign tasks to, or prepare work schedules for, individual contractor employees. It shall be the responsibility of the contractor to manage its employees and to guard against any actions that are of the nature of personal services or give the perception of personal services. If the contractor believes that any actions constitute, or are perceived to constitute personal services, it shall be the contractor's responsibility to notify the Procuring Contracting Officer (PCO) immediately.

Distribution Statement A. Approved for public release: distribution is unlimited

1.3.2. Conflict of Interest

IAW 48 Code of Federal Regulations (CFR) § 3.104 Procurement Integrity and 48 CFR § 3.1103 Procedures, the contractor shall require any of their employees participating in source selections to sign a nondisclosure agreement and disclose any potential conflicts of interest. The contractor shall ensure its employees do not have individual conflicts of interest as it relates to supporting the specific task order requirements.

Notice Of Potential Future Organizational Conflicts Of Interest

(a) Notice. The Contracting Officer has determined that the Headquarters (HQ) Staff Support for Acquisition of Services for Simulation, Training, Test and Threat contract award will create a potential organizational conflict of interest (OCI) on the future competition for any CPE STRI or ACC-Orlando requirement other than a follow-on action related to this effort (i.e. SETA III or its replacement). The potential OCI will exist for the prime contractor, any subcontractor, joint venture, or other teammate involved in contract performance. In this case, the Contracting Officer has determined the identified OCI cannot be successfully neutralized or mitigated. Therefore, the contractor and its partners are ineligible to perform as a supplier, a subcontract supplier, or a consultant to a supplier for any other requirement within CPE STRI for the life of the [Program Name] contract plus one year. This restriction is necessary to avoid unfair competitive advantage or potential bias on other competitions wherein contractor personnel may be utilized to provide support.

(b) Description of Potential Conflict. The contractor will provide expert advise on the Planning, Programming, Budgeting and Execution (PPBE) process, Strategic Portfolio Integration and Acquisition Strategies. These actions would cause a conflict if the contractor attempts to submit proposals for requirements where it provided this support. Additionally, the contractor is imbedded with CPE STRI personnel so while not directly tied to a requirement the contractor could still have a conflict if its personnel have been made privy to information about other requirements that provide it a competitive advantage.

1.4. Background

CPE STRI is transforming. The current organization is defined below for baseline purposes. This requirement is written to allow flexibility for when (not if) the organization changes. The contractor will prioritize service capacity to meet fluctuating demands.

The Directorates are responsible for the overall coordination and integration of enterprise functions across the CPE STRI organization. Each Directorate serves as the functional subject matter expert and senior advisor to the Capability Program Executive (CPE), Deputy CPE (DCPE), Assistant CPE (ACPE) and PMs/PLs.

1.4.1. Security Directorate - G2

The Security Directorate (G2) establishes and maintains security management and protection programs in support of CPE STRI and leased facility tenants to ensure

Distribution Statement A. Approved for public release: distribution is unlimited

regulatory compliance, protection and safeguarding of assets (national security information, people, facilities, and property), and the planning, preparation, mitigation, response and recovery from all-hazard events. Individual security and protection programs include: Sensitive Compartmented Information, Personnel Security, Industrial Security, Information Security, Operations Security, Physical Security, Antiterrorism, and Emergency Management.

1.4.2. Operations Directorate - G3

The Operations Directorate leads and integrates activities aligned with strategic directives and manages enterprise-level planning to ensure seamless execution of organizational goals. It also manages public affairs and communication activities, serving as the primary media contact and overseeing communication materials, events, and protocol support for senior leaders.

1.4.3. Product Support Directorate - G4

The Product Support Directorate focuses on acquisition logistics, sustainment, item management, fielding management, base operations and facilities, and property accountability policies and regulations. The Product Support Directorate develops strategies, processes, and procedures providing strategic oversight and direction for product support across the enterprise.

1.4.4. Acquisition Directorate - G5

The Acquisition Directorate advises on defense acquisition, contracting policies, ensures compliance with DoD directives and manages program milestones and documentation to maintain operational efficiency and accountability. The Acquisition Directorate also ensures the CPE's activities align with Army and DoD strategic goals through strategic planning, cross-functional coordination, and policy implementation. Monitors performance, optimizes resources, and drives innovation to support modernization efforts. Serves as a bridge between PMs/PLs and broader Army objectives, and ensures unity of effort, compliance, and effective resource use to achieve mission success.

1.4.5. Chief Information Officer - G6

The Chief Information Office (CIO) oversees and provides technology solutions, and cybersecurity planning, operations, and innovation, ensuring compliance with DoD policies. The CIO also oversees technology and networks infrastructure, records, privacy, FOIA, foreign disclosure, and emerging technology integration to foster digital transformation. Provides strategic guidance in emerging technologies and digital tools. Oversees subordinate directorates for technology solutions, cybersecurity support and cybersecurity governance.

1.4.6. Business Management Directorate – G8

The Business Management Directorate oversees budgeting, financial management, cost analysis, travel management, and resource accountability to ensure fiscal responsibility and transparency.

Distribution Statement A. Approved for public release: distribution is unlimited

1.4.7. ACC-Orlando

As a Training Contracting Center of Excellence, ACC-Orlando is responsible for procuring a wide range of training and testing products and services for the Army and Joint customers. This support is crucial for outfitting Soldiers with the latest live, virtual, and constructive training and simulation technologies. ACC-Orlando consistently delivers its contracting solutions on time, ensuring maximum benefit to the government, Soldiers, and U.S. taxpayers. The organization's portfolio includes a variety of Army Training Aids, Devices, Simulators, and Simulations (TADSS), as well as operations and maintenance support for test ranges, targets, and threat systems.

2. APPLICABLE DOCUMENTS

See Appendix A for applicable documents.

3. REQUIREMENTS

The contractor shall provide the acquisition support and specialized services required by the CPE STRI, its HQs and its PMs/PLs to effectively plan, execute, and manage a diverse portfolio of capabilities in support of the Army's training, testing and threat requirements to increase combat readiness.

3.1. Overarching Requirements

The contractor shall comply with the applicable documents listed in Appendix A.

In accordance with (IAW) the Procurement Integrity Act, the contractor shall require any of their employees participating in source selections in an advisory capacity to sign a nondisclosure agreement and disclose any potential conflicts of interest.

The contractor shall be in compliance with the security requirements specified in Contracts Security Classification Specifications, DD Form 254.

The contractor shall provide information required for issuance of a Common Access Card (CAC) to the contract or individual Task Order Trusted Agent, as appropriate, for all personnel requiring access to Government facilities in performance of this contract.

The contractor shall ensure all personnel requiring access to Government computer resources complete CPE STRI's training for operating and retaining a user account on a Government network.

Contractor personnel shall use their assigned Government (.ctr@army.mil) email address for all email correspondence related to performance of Government's task orders.

The contractor workforce shall maintain all required certifications and training.

Distribution Statement A. Approved for public release: distribution is unlimited

The standard operating hours for on-site personnel is 0730-1615 hours, Monday through Friday. The Core hours for on-site personnel are 0900-1500 hours, Monday through Friday.

3.1.1. Security and Safety

The contractor is required to possess a Top Secret facility clearance (FCL) with No storage requirements. The contractor must comply with the security regulations and requirements outlined in the Contract Security Classification Specifications, DD Form 254, and any associated addendum sheets.

All employees of the contractor who will have access to U.S. Government systems and technical information must undergo a security investigation, although certain positions/duties may not require a security clearance. The appropriate clearance level will range from HSPD-12 (Tier-1) to Top Secret (Tier-5), depending on the sensitivity of the information being accessed. The contractor shall ensure that all employees performing under this contract have the appropriate clearance level for the specific requirements they are supporting. Specific tasks and duties may require personnel to be indoctrinated into Sensitive Compartmented Information (SCI).

3.1.2. Safeguarding

The contractor shall be responsible for safeguarding all government equipment, information and property provided for contractor use. At the close of each work period, the contractor shall secure all government facilities, equipment, and materials, as applicable,

3.1.3. Access and general protection/security policy and procedures

The contractor and all associated subcontractor employees shall provide all information required for background checks to meet installation access requirements to be accomplished by installation Provost Marshal Office, Director of Emergency Services or Security Office. The contractor workforce must comply with all personal identity verification requirements (FAR clause 52.204-9, Personal Identity Verification of Contractor Personnel) as directed by DOD, HQDA and/or local policy. In addition to the changes otherwise authorized by the changes clause of this contract, should the Force Protection Condition (FPCON) at any individual facility or installation change, the Government may require changes in contractor security matters or processes.

3.1.3.1. Contractors requiring Common Access Card (CAC)

The contractor shall provide information required for issuance of a Common Access Card (CAC) to the contract or individual Task Order Trusted Agent, as appropriate, for all personnel requiring access to Government facilities in performance of this contract.

For contractors requiring Common Access Cards (CAC), the contractor employee requires, at a minimum, a favorably adjudicated Tier 1 (T1) or an equivalent or higher investigation in accordance with Army Directive 2014-05, Policy and Implementation

Distribution Statement A. Approved for public release: distribution is unlimited

Procedures for Common Access Card Credentialing and Installation Access for Uncleared contractors. The contractor shall be responsible for submitting T1 requests. The contractor employee shall be issued a CAC to include but not limited to the following duties (1) To meet Isolated Personnel Report (ISOPREP)/ mandatory training requirements (2) Both physical access to a DOD facility and access, via logon, to DOD networks on-site or remotely; (3) Remote access, via logon, to a DOD network using DoD-approved remote access procedures; or (4) Physical access to multiple DOD facilities or multiple non-DOD federally controlled facilities on behalf of the DOD on a recurring basis for a period of 6 months or more. At the discretion of the sponsoring activity, an initial CAC may be issued based on a favorable review of the Federal Bureau of Investigation (FBI) fingerprint check and a successfully scheduled T1 at the Office of Personnel Management (OPM).

3.1.3.2. Contractors that do not require CAC, but require access to a DoD facility or installation

The contractor and all associated sub-contractors employees shall comply with adjudication standards and procedures using the National Crime Information Center Interstate Identification Index (NCIC-III) and Terrorist Screening Database (Army Directive 2014-05/AR 190-13), applicable installation, facility and area commander installation/facility access and local security policies and procedures (provided by government representative); or, at OCONUS locations, in accordance with status of forces agreements and other theater regulations.

3.1.4. Hazardous Duty

Contractor personnel may be eligible for allowances typically available for DOD civilians deploying into difficult or hazardous conditions. The level of compensation allowable will be commensurate with U.S. State Department and OPM prevailing compensation rates for DOD civilian personnel.

Under this PWS, Hazardous Duty Pay is permissible only up to the level authorized by the Department of State Standardized Regulation (DSSR).

3.1.5. Anti-Terrorism (AT) Level 1 and Awareness Training

All contractor employees, to include subcontractor employees, requiring access Army installations, facilities and controlled access areas shall complete AT Level I Awareness training within 30 calendar days after contract start date or effective date of incorporation of this requirement into the contract, whichever is applicable. The contractor shall submit certificates of completion for each affected contractor employee and subcontractor employee, to the COR or to the contracting officer, if a COR is not assigned, within 30 calendar days after completion of training by all employees and subcontractor personnel. AT level I Awareness training is available at the following website: <http://jko.jten.mil>.

Anti-Terrorism Awareness Training for Contractor Personnel Traveling Overseas. U.S. based contractor personnel and associated Sub-contractor personnel are required to

Distribution Statement A. Approved for public release: distribution is unlimited
make available and to receive USG provided AOR specific AT awareness training as required by AR 525-13. Specific AOR training content is directed by the combatant commander with the unit Anti-Terrorism Officer (ATO) being the local point of contact.

3.1.6. Information Technology (IT)/Information Assurance (IA) Training and Certification

If required, all contractor employees and associated Subcontractor employees must complete the DOD cybersecurity awareness training before issuance of network access and annually thereafter. Cybersecurity/Information Technology training can be accomplished at <https://public.cyber.mil/training/cyber-awareness-challenge/>. All contractor employees working IA/IT functions must comply with DoD and Army training requirements in DoDD 8570.01, DoD 8570.01-M and AR 25-2 within six months of appointment to IA/IT functions.

3.1.7. Operational Security (OPSEC) Training

Per AR 530-1, Operations Security (OPSEC), contractor personnel must complete Level 1 OPSEC training within thirty (30) calendar days of reporting for duty. All contractor personnel must complete annual OPSEC awareness training. The contractor shall ensure all applicable personnel have completed OPSEC initial training and annual refresher training and shall certify that their work force has completed the training through the submission of completion certificates(s) upon request to the COR/ Contracting Officer within 30 days of arrival on the installation.

OPSEC training can be accomplished at the Defense Security Services website at: <https://securityawareness.usalearning.gov/opsec/index.htm>.

3.1.8. iWATCH Training

The contractor and all associated sub-contractors shall brief all employees on the local iWATCH Army program (training standards provided by the requiring activity ATO). This local developed training will be used to inform employees of the types of behavior to watch for and instruct employees to report suspicious activity to the COR. This training shall be completed within 30 calendar days of contract award and within 30 calendar days of new employees commencing performance with the results reported to the COR NLT 30 calendar days after contract award.

3.1.9. Counterintelligence Awareness and Reporting (CIAR)

All contractors and subcontractors with security clearances will complete Counterintelligence Awareness and Reporting (CIAR) training within 30 days of assignment and every 12 months thereafter, as mandated by DoDD 5240.06. The following computer-based training satisfies Army training requirements; "Counterintelligence Awareness and Reporting for DoD Employees" (CI116.16) and is available at <https://www.cdse.edu/>.

3.1.10. Synchronized Pre-deployment and Operational Tracker (SPOT)

Distribution Statement A. Approved for public release: distribution is unlimited

The contractor shall ensure SPOT applicability with respect to visiting countries, in accordance with the DOD Foreign Clearance Guide, at the following address, <https://www.fcg.pentagon.mil/fcg.cfm>.

SPOT has been designated as the Joint Enterprise Contractor management and accountability system to provide a central source of contingency contractor information and a summary of contract services IAW DODI 3020.41. USG representatives are required to maintain, by-name, contractor accountability within SPOT. Contractor administrators shall register for a SPOT account at <https://spot.dmdc.mil> and provide the necessary information for all deploying contractor personnel. All contractor data shall be entered into the SPOT database for all contractor personnel traveling to any OCONUS and CONUS location. The contractor shall coordinate with the USG Procuring Contracting Officer (PCO), Contracting Officer's Representative (COR) and respective Combatant Command (COCOM).

Contractor personnel must have a SPOT generated Letter of Authorization signed by the cognizant USG Procuring Contracting Officer (PCO) in order to process through a CONUS Replacement Center (CRC) or to travel to, from, or within the designated operational area. The Letter of Authorization also will identify any additional authorizations, privileges, or USG support that contractor personnel are entitled to under the resulting contract.

3.1.11. Army Training Certification Tracking System (ATCTS)

All contractor employees with access to a government Information System (IS) must be registered in the Army Training Certification Tracking System (ATCTS) at commencement of services, and must successfully complete the DOD Information Assurance Awareness Training prior to access to the IS and then annually thereafter.

3.1.12. Performance or Delivery in a Foreign Country

The contractor shall comply with DFARS Clause 252.225-7043, Antiterrorism/Force Protection for Defense Contractors Outside the US. Non-local national contractor personnel must comply with theater clearance requirements and allows the combatant commander to exercise oversight to ensure the contractor's compliance with combatant commander and subordinate task force commander policies and directives.

3.1.13. Contractors authorized to accompany the force

The contractor shall comply with DFARS Clause 252.225-7040, Contractor Personnel Authorized to Accompany U.S. Armed Forces Deployed Outside the United States. The contractor shall ensure compliance with the following AT/OPSEC-related topics outlined in the clause: Compliance with Laws and Regulations, Pre-Deployment Requirements, Required Training, and Personnel Data requirements.

3.1.14. Handling or Access to Classified Information

Distribution Statement A. Approved for public release: distribution is unlimited

The contractor shall comply with FAR 52.204-2, Security Requirements. This clause involves access to information classified "Confidential," "Secret," or "Top Secret". The contractor shall comply with (1) The Security Agreement (DD Form 441), including the National Industrial Security Program Operating Manual (NISPOM) (CFR Title 32 Part 117) and (2) any revisions to CFR Title 32 Part 117.

3.1.15. Controlled Unclassified Information (CUI)

The contractor shall comply with all applicable cybersecurity requirements as outlined in DFARS Clause 252.204-7012, Safeguarding Covered Defense Information and Cyber Incident Reporting. This clause mandates compliance with the National Institute of Standards and Technology (NIST) Special Publication (SP) 800-171, Protecting Controlled Unclassified Information in Nonfederal Systems and Organizations. The contractor shall comply with DFARS Provision 252.204-7019, "Notice of NIST SP 800-171 DoD Assessment Requirements," which requires the contractor to have an adequate NIST SP 800-171 summary assessment score within the Supplier Performance Risk System (SPRS) in the Procurement Integrated Enterprise Environment (PIEE).

The Government will verify that the contractor has a medium- or high-level NIST SP 800-171 assessment score of 110 or better, as described in the "NIST SP 800-171 DoD Assessment Methodology." This score must be visible within SPRS. If a vendor's assessment score does not meet the required threshold, DFARS Clause 252.204-7020, NIST SP 800-171 DoD Assessment Requirements, shall be included in the contract. The contractor shall provide their "System Security Plan" and "Plan of Action and Milestones" (POA&M) for NIST SP 800-171 compliance verification and assurance by the Government. The contractor shall ensure full compliance with cybersecurity requirements to safeguard controlled unclassified information (CUI) and support the Department of Defense's cybersecurity objectives.

3.1.16. Controlled Unclassified Information (CUI) Training

Pursuant to DoDI 5200.48, Section 3, Programmatic, every individual at every level, including DoD civilian and military personnel as well as contractor personnel providing support to the DoD, will comply with the requirements for initial and annual refresher CUI training. DoD Mandatory CUI training is available at the following website: <https://securityawareness.usalearning.gov/cui/index.html>.

3.1.17. USG Directed Travel/Temporary Duty

Some tasks shall require the contractor to travel and provide on-site support at various locations. The contractor shall support direct and remote locations as needed. The contractor shall support international and domestic travel as required in the defined taskings. The contractor shall ensure compliance with Joint Travel Regulations and ensure appropriate pre-travel security briefings and post-travel debriefings are conducted IAW Counterintelligence Awareness and Reporting (CIAR) requirements. When required to travel in support of the HQs, the contractor shall provide daily Travel Reports, end of

Distribution Statement A. Approved for public release: distribution is unlimited

trip Situation Reports (SITREPs), Storyboards, and photos as defined in the travel tasking.

This requirement will require contractor personnel to travel to, from and within CONUS and OCONUS locations as specified by the travel tasking. All travel shall be conducted and invoiced IAW with FAR 31.205-46 Travel Costs and the Joint Travel Regulations (JTR). All travel requirements shall be pre-approved by the (COR). The contractor shall be responsible for coordinating all travel arrangements to, from, and in-and-about all CONUS and OCONUS Points of Destination. Costs incurred for lodging, meals, and incidental expenses shall be considered reasonable and allowable only to the extent that they do not exceed on a daily basis the maximum per diem rates, authorized for Federal civilian personnel, in effect at the time of travel. Airfare costs shall be the lowest priced airfare available to the contractor during normal business hours. Airfare costs in excess of the above standard airfare are unallowable except as authorized under FAR 31.205-46(b).

Additionally, the following applies:

Non-program management office travel shall be conducted and invoiced IAW FAR 31.205-46 Travel Costs and the JTR.

3.1.18. Military Extraterritorial Jurisdiction Act (MEJA) Compliance

The contractor shall comply with Department of Defense Instruction (DODI) 5525.11 - Criminal Jurisdiction over Civilians Employed By or Accompanying the Armed Forces outside the United States, Certain Service Members, and Former Service Members. The contractor shall maintain a copy of each employee's written acknowledgement of receipt of the notification prior to travel/deployment and have this available for the (COR or IPO USG Representative if no COR appointed, select one) upon request.

IAW DODI 5525-11, Paragraph 6.1.5, it is DOD policy that the requirement for order and discipline of the Armed Forces OCONUS extends to civilians employed by or accompanying the Armed Forces, and that such persons who engage in conduct constituting criminal offenses shall be held accountable for their actions, as appropriate.

3.1.19. Passports

Contractor personnel who are US citizens and are traveling abroad shall possess a valid U.S. passport and all appropriate visas and clearances required to conduct the assigned overseas missions. (See - <https://www.fcgi.pentagon.mil/fcg.cfm>).

3.1.20. Licenses

Contractor personnel who are US citizens, shall possess valid U.S. (State) and/or international driver's licenses, as required. The contractor shall ensure licenses remain valid during the entire performance period.

Distribution Statement A. Approved for public release: distribution is unlimited

3.1.21. Use of Illegal Substances

All contractor and subcontractor personnel shall be subject to both U.S. and local laws regarding illegal or unauthorized substances or items. Accordingly, the contractor shall establish a zero-tolerance policy with respect to substance abuse.

3.1.22. Incident Reporting

The contractor shall promptly report pertinent facts regarding incidents involving USG property damage, personnel misconduct and/or injury to personnel and to cooperate in any resulting safety and/or security investigations. The contractor shall adhere to the following INCIDENT LEVELS (IL), based on severity, when determining specific incident reporting protocols. These reporting requirements should not be perceived to take precedence over an individual's personal assessment with regard to his or her own health and well-being. The contractor shall prepare an Accident/Incident Report IAW the CDRL.

MINOR INCIDENTS: The contractor shall report pertinent facts regarding the incidents involving minor equipment/property damage, personnel misconduct and/or injury WITHIN 48 hours of the initial discovery. The contractor shall notify the appropriate USG POCs (i.e. COR) via telephonic or electronic (email) means. For this IL, minor property damage is defined as damage that does not pose any risk of non-performance of the requirement (s) for which it was intended and poses no risk of bodily injury to any person (s) operating in and around it. For this IL, minor injury is defined as superficial; including but not limited to minor cuts, bruises or muscle strains.

MODERATE INCIDENTS: The contractor shall report pertinent facts regarding incidents involving moderate equipment/property damage, personnel misconduct and/or injury within 24 hours of the initial discovery. The contractor shall notify the appropriate USG POCs (i.e. cognizant PCO, local authorities and COR), where applicable, telephonically). A voice mail message left telephonically is not acceptable to meet this requirement. Within 48 hours of the initial verbal report, the contractor shall submit an Accident/Incident Report IAW the CDRL to the PCO and the (COR). For this IL, moderate equipment/property damage is defined as damage that causes a diminished training capability and poses some risk of non-performance of the requirement (s) for which it was intended and/or poses some risk of bodily injury to any person (s) operating in and around it. For this IL, moderate injury is defined as injuries that temporarily incapacitate an individual (to include but not limited to, twisted ankles and concussion) but which does not pose any significant hindrance to the Individuals' performance of the requirement(s).

MAJOR INCIDENTS: The contractor shall report pertinent facts regarding incidents involving major equipment/property damage, and/or major personnel misconduct, and/or major injury or fatality IMMEDIATELY upon initial discovery, in person or telephonically, to the appropriate USG POCs (i.e. cognizant PCO, Program Director, local authorities). A voice mail message left telephonically is not acceptable to meet this requirement. The contractor shall also IMMEDIATELY secure the site to ensure the preservation of evidence and cooperate in any resulting safety and/or security investigations. Within 24 hours of the initial verbal report, the contractor shall submit an Accident/Incident Report

Distribution Statement A. Approved for public release: distribution is unlimited

IAW the CDRL to the PCO and (COR). For this IL, major equipment/property damage is defined as damage that ceases, severely diminishes the training capability and/or poses a serious risk of bodily injury to any person(s) operating in and around it. For this IL, major injury is defined as any injury/illness that completely incapacitates an individual, to include but not limited to bone breaks, loss of limb(s).

After an incident, the contractor shall take appropriate steps to correct the situation and inform the USG of the corrective action taken.

3.2. Agile Program Management

The contractor shall implement Agile program management methodologies across all task areas to improve delivery speed, quality, flexibility, and responsiveness to CPE STRI, the Warfighter, and Partner Nation needs. The contractor shall execute a task-based, outcome-focused, capability-centric approach that results in work products and deliverables.

- A sample list of products/deliverables that the contractor is expected to create, review and/or modify is included in Appendix B.
- A sample list of electronic tools (e-Tools) and/or Government systems that will need to be used during the execution of the contract is included in Appendix C.
- A description of each PM/PL portfolio of capabilities is included in Appendix D.

3.2.1. Agile Framework Implementation

The contractor shall:

- Establish and maintain a Scaled Agile Framework (SAFe) or equivalent methodology for managing all tasks and present to the Government within 30 days of contract award.
- Implement Sprints to prioritize tasks and efforts across the CPE with the Government monthly
- Create and manage backlogs with prioritized tasks within Sprints
- Implement continuous process improvement
- Track and utilize Agile artifacts and documentation such as backlogs, user-stories, burndown charts, feature definitions-of-done, sprint reviews, and sprint demonstration outcomes.

3.2.2. Agile Team Structure

The contractor shall:

- Organize teams aligned to value streams agreed to by the Government
- Establish roles and responsibilities for each Agile Team to ensure delivery of capabilities to our Warfighters and Foreign Partners
- Implement required Agile ceremonies such as daily stand-ups, sprint planning, reviews, and retrospectives
- Foster team self-organization and accountability
- Be prepared to incorporate into existing Government Agile team structures

Distribution Statement A. Approved for public release: distribution is unlimited

3.2.3. Agile Metrics and Reporting

The contractor shall:

- Implement velocity tracking and burndown/burnup charts for the tasks prioritized by the Government
- Measure cycle time and lead time for work products and deliverables
- Track and report on task completion rates and quality metrics in human readable reporting venues and dashboards in real-time
- Provide visualization of work in progress and impediments
- Deliver traditional Contract Data Requirements List (CDRL) information using Agile tools and dashboards for continuous monitoring (DI-MISC-80711A, Knowledge Management Portal and Dashboard)

3.2.4. Agile Tools and Technology

The contractor shall:

- Implement and maintain Agile project management tools
- Establish continuous integration/continuous delivery (CI/CD) pipelines, where applicable
- Create automated testing frameworks for applicable deliverables
- Develop and maintain information radiators and dashboards
- Integrate dashboard data into other enterprise systems

3.2.5. Agile Training and Coaching

The contractor shall:

- Provide Agile training to Government and contractor personnel as required
- Coach teams on Agile best practices and methodologies as required
- Facilitate Agile ceremonies and events
- Support organizational change management for Agile adoption

3.2.6. Agile Implementation Plan and Management

The contractor shall propose and manage this contract using an Agile Implementation Plan detailing the following information:

- Framework selection and customization
- Team structure and roles
- Tools and technology approach
- Implementation timeline

As part of the plan, the contractor shall document known task backlogs. The contractor shall inform the Government of their plan to address the backlogs to include:

- Requirements prioritization
- User stories with acceptance criteria
- Dependencies or constraints
- Estimated effort to address the backlog
- Sprint Planning and Review Documentation

Distribution Statement A. Approved for public release: distribution is unlimited

- Sprint goals and objectives
- Committed user stories
- Acceptance criteria
- Definition of Done
- Demo materials
- Agile Performance Dashboard
- Velocity metrics
- Quality metrics
- Impediment tracking
- Task burndown

3.2.7. Agile Maturity Assessment

The contractor shall provide during monthly Sprint retrospective reviews and dashboard:

- Improvement recommendations
- Success metrics
- Updated implementation roadmap

3.2.8. Key Personnel (Agile Program Manager)

The Agile Program Manager (PM) has a pivotal role within the project team, responsible for leading the implementation of Agile methodologies to ensure the successful delivery of the Government's objectives. The COR will review and approve the Contractor's Agile PM's resume. If the approved Agile PM departs from the company, the contractor shall provide a new COR Approved Agile PM within 30 days of departure. The Agile PM must possess a robust understanding of Agile principles, including Scrum, Kanban, and Lean methodologies, and demonstrate a proven track record of successful leadership in Agile environments. This includes the ability to facilitate Agile ceremonies, foster collaboration among cross-functional teams, and drive continuous improvement initiatives. The Agile PM will be expected to mentor team members in Agile practices, ensuring adherence to Agile frameworks while adapting to the unique needs of the supported Government organizations. The ideal candidate will have experience in managing complex Agile projects, showcasing their capability to navigate challenges and deliver results in a dynamic and fast-paced environment.

3.2.8.1. Specific Experience Requirements for the Agile Program Manager

To effectively fulfill the role of Agile Program Manager, candidates must meet the following experience requirements:

- **Years of Experience**
 - Minimum of **5 years** of experience in Agile project management. ***Note, the previous CPE STRI SETA contracts are not considered Agile requirements.
- **Types of Agile Projects**
 - Proven experience leading **at least 3 Agile projects** from inception to completion.

Distribution Statement A. Approved for public release: distribution is unlimited

- Experience in managing projects that involve **cross-functional teams** and multiple stakeholders.
- Demonstrated success in projects that required **rapid iteration and feedback loops**, such as software development or product management.
- Familiarity with **Agile transformations** within organizations, showcasing the ability to implement Agile practices at scale.

3.3. Acquisition and Enterprise Enabling Task Areas

CPE STRI's HQ serves as the central authority for acquisition planning, programming, and resource management. Its function ensures that Army acquisition programs are strategically aligned, properly resourced, and effectively managed. CPE STRI's HQ serves as a critical link between the Office of the Assistant Secretary of the Army (Acquisition, Logistic and Technology) (OASA(ALT)), PMs/PLs, and external stakeholders and provides support across the acquisition lifecycle to ensure that the Army develops, procures, and sustains the equipment, systems, and technologies needed to maintain readiness and achieve modernization goals.

The contractor shall provide the acquisition support services and enabling capabilities to the Government's programs and manage the task backlog in accordance with section 3.2 of this PWS.

The contractor shall serve as the Subject Matter Expert supporting the HQs Directorates, and PMs/PLs by delivering actionable insights, strategic guidance, and operational capabilities that enhance program execution throughout the acquisition lifecycle, resource management, and alignment to Army priorities.

The contractor shall manage and execute tasks within the following functional areas:

3.3.1. Plans, Programs and Resourcing

The contractor shall provide the following capabilities:

- Provide expert guidance to CPE STRI focusing on program life cycle compliance with Army Regulations, Army Directives, Federal Acquisition Regulations (FAR), Defense Federal Acquisition Regulation Supplement (DFARS), Department of Defense (DoD) Directives, Instructions and Publications and other relevant policies.
- Review, validate and recommend actionable insight to enable PMs/PLs to deliver acquisition strategies and acquisition documentation that leverage the Adaptive Acquisition Framework. The contractor shall ensure that the strategies and documentation are comprehensive, compliant with statutory, regulations and policy requirements.
- Implement and ensure compliance of acquisition policies, regulation and directives issues by OASA(ALT) and Department of War across the CPE enterprise.
- Conduct internal assessments and audits of program compliance, identifying gaps and recommending corrective actions.

Distribution Statement A. Approved for public release: distribution is unlimited

- Maintain a comprehensive understanding of CPE STRI programs and recommend actionable insights and opportunities to support decision making and enable the integration of CPE STRI's portfolio to ensure programs are synchronized, avoid duplication of effort, and maximize resource efficiency.
- Participate in strategic planning efforts and provide analysis and actionable recommendations on acquisition policy, program, and budget trends.
- Track and analyze program performance metrics, including cost, schedule, and technical progress and identify risks and opportunities to enable informed decision-making and proactive risk management.
- Provide actionable insight to the HQ, PMs/PLs to ensure programs are properly funded and aligned with the Planning, Programming, Budgeting and Execution (PPBE) process.
- Formalize acquisition programs decisions and actions resulting from meetings with the Milestone Decision Authority (MDA).
- Engage in the development of data calls responses from internal and external sources.
- Provide the HQ and PMs/PLs with materials, analysis, program-specific information and justifications to support OASA(ALT) and Congressional engagements and inquiries.
- Obtain and maintain proficient in Acquisition Management data systems in support of portfolio analysis and acquisition reporting requirements. Work with PMs/PLs to ensure that data reporting requirements are complete, accurate, and consistent across the CPE STRI enterprise. A sample list of e-Tools and data systems are listed in Appendix C.
- Organize, draft and submit (monthly) information regarding organizational activities and accomplishments for internal and external publication and on occasion, may need to present or attend events for the program teams
- Identify opportunities to improve acquisition processes at CPE STRI
- Review, compile, and submit audit sample documentation to ensure compliance with established audit requirements and checklists. The contractor shall work closely with Government personnel to gather, organize, and verify the accuracy of documentation required for audits. The contractor shall ensure timely submission of audit samples to allow for Government review prior to final submission to the appropriate authority. The contractor shall lead the Quarterly-, Follow-up – and internal audits. The sample size of the Quarterly audits vary in size depending on the audit type. Typically involve 50-60 audit samples and may include Procurement, Revenue, or Civilian Pay transactions and may originate from the Legacy system or GFEBS.
- Contract Execution Reports (DI-MGMT-81928, Contractor's Progress and Status Report)

3.3.2. Enterprise Operations

The contractor shall provide the following capabilities:

- Serve as the principal CPE STRI point of contact for enterprise task management activities using the Enterprise Task Management Software Solution (ETMS2)

Distribution Statement A. Approved for public release: distribution is unlimited over Unclassified and Classified systems. CPE STRI processes over 1,000 externally driven tasking per year, with 5% considered short suspense requiring rapid coordinating across the enterprise. CPE STRI additionally has many internal staffing actions and task requirements using ETMS2 across the enterprise.

- Process taskers, including but not limited to, administrative, Congressional Inquiries, acquisition documentation routing, Commander's Critical Information Requirement (CCIR), agreements, and RFIs from both external and internal sources.
- Tailor the instructions for each tasker before assignment to the applicable enterprise stakeholders. For external taskers, the contractor shall assess the applicability of the tasker to CPE STRI equities before assignment and close out as needed.
- Consolidate all responses received for a task into a singular CPE STRI response and conduct quality assurance review on the completeness and accuracy of the responses, including checking for grammar and spelling errors. The contractor shall utilize programmatic information from various briefings, including Program, Portfolio, Management and Modernization Reviews, to conduct Quality Assurance on responses received from the applicable enterprise stakeholders prior to initiating the Command Group review and approval process. The Command Group approval process shall be IAW established processes.
- Develop, enhance and maintain an Organization Common Operating Picture (COP) integrating leadership calendars, tasks and events.
- Design and implement a Knowledge Management (KM) framework that defines the processes, technology, and governance for how information is managed and shared.
- Create and maintain the repository or "single source of truth" where CPE STRI's KM is stored and organized.
- Plan and execute external engagements, media relations, and strategic communications in collaboration with the Public Affairs Officer (PAO).
- Plan and execute CPE STRI conferences, events, and exhibitions in compliance with OSD, SecArmy, and ASA(ALT) guidance. This includes, but is not limited to, facility arrangements (meeting/exhibit space and lodging requirements), catering, exhibits, keynote speakers, travel arrangements, logistics, agendas, audiovisual needs, and other requirements aligned with the needs of the customer. It is anticipated that planning support will be required for 59 events, including:
 - 1 large event (e.g., I/ITSEC),
 - 4 medium events (e.g., DASA Summit/Acquisition Awards Ceremony, Army Ball, All Saints Ball),
 - 3 small events (e.g., TSIS, VA Medical, ITEA),
 - 50 internal events (e.g., Industry Day, Program Management Reviews, Battle Update Brief events, VIP visits),
 - 25 Retirement and Change of Charter events, and
 - 1 Foreign Military Sales event during this period of performance.

Distribution Statement A. Approved for public release: distribution is unlimited

3.3.3. Management Process Support

The contractor shall provide the following capabilities:

- Recommend innovative Agile Office management with goal to improve organizational processes and communication internally and externally
- Create dashboards and visualizations and provide data-driven insights and analytical support to enable informed decision-making regarding acquisition strategies, business processes, and resource allocation
- Provide comprehensive operational and analytical support, ensuring the smooth functioning of core processes and enabling effective decision-making. This role requires a high degree of knowledge, organization, attention to detail, and the ability to manage multiple priorities in a fast-paced environment
- Monitor changes to regulations, directives, policies, Executive Orders, Operational Orders, Cyber Tasking Order (CTO) and communicate updates to relevant stakeholders, emphasizing impacts to the organization. The contractor shall recommend updates to local policies and procedures based on changes to regulations, directives and policies. The contractor shall conduct internal assessments and audits of compliance, identifying gaps and recommending corrective actions.

4. UNIQUE REQUIREMENTS

In addition to the requirements in Section 3.0 the contractor shall execute unique requirements in the sections below.

4.1. Security Directorate - G2 Task Areas

The contractor shall be an experienced subject matter expert in all Department of the Army (DA) Security and Protection Programs IAW with applicable Army Regulations listed in Appendix A

The contractor shall support the management of the CPE STRI's Personnel Security Program IAW AR 380-67 and locally established SOPs.

The contractor shall support the management of the CPE STRI's Industrial, Information and Operations Security Programs IAW AR 380-49, AR 380-5, AR 530-1 and locally established SOPs.

The contractor shall support the management of the CPE STRI's Physical Security Program IAW AR 190-13 and locally established SOPs.

The contractor shall support the management of the CPE STRI's Antiterrorism/Force Protection Programs IAW AR 525-13 and locally established SOPs.

The contractor shall support the management of the CPE STRI's Emergency Management Program IAW AR 525-27 and locally established SOPs.

Distribution Statement A. Approved for public release: distribution is unlimited

The contractor shall have or obtain and maintain the following certifications within nine months of entering the position.

- Security Fundamentals Professional Certification (SFPC) through the Security Professional Education Development (SPED) Program (<https://www.cdse.edu/certification/>)
- Certification will be maintained through the completion of Professional Development Units in accordance with SPED policies (<https://www.cdse.edu/Certification/Certification-Maintenance/>).

4.1.1. Stand-Alone Facility (SAF) Security & Access Control Support – Orlando Facilities

The contractor shall provide security and access control support for each day that CPE STRI is open at the Integration Development Environment (IDE), Partnership IV and Partnership V SAFs.

Hours of Operations

- 0700-1800 for IDE
- 0600-1800 for Partnership IV (PIV) and Partnership V (PV)

The contractor shall facilitate building access control IAW locally established SOPs.

The contractor shall follow all procedures and requirements for safeguarding classified material in accordance with regulations.

The contractor shall assist with management of the Intrusion Detection System (alarm system) to include changing and verify access alarm codes, cipher lock codes, and X-09/10 and other series combination lock codes.

4.1.2. Stand-Alone Facility (SAF) Security & Access Control Support – Redstone Arsenal, AL Facilities

The contractor shall perform security and access control functions in support of the Threat Systems Management Office (TSMO) for Building 4497 Sensitive Compartmented Information Facility (SCIF), and monitor buildings 3200, 3203, 3210, 3311, 3216, 4381, 4454, 4455, 4459, 4496, and 4497 Annex, for a period of 24 hours a day for 7 days a week.

The standard operating hours for on-site personnel are 0630-1630 Monday through Friday. Core hours for on-site personnel are 0900-1500 hours, Monday through Friday. Core Hours do not include Federal Holidays as defined by Federal law (5 U.S.C. 6103) and listed on the U.S. Office of Personnel Management's website, <https://www.opm.gov/>. Access Control Personnel shall be available to shift hours for additional coverage times when given prior notification.

Distribution Statement A. Approved for public release: distribution is unlimited

The contractor shall provide access control by ensuring all individuals requesting access all TSMO facilities have a proper badge or credentials using appropriate databases before gaining access.

The contractor shall monitor all security cameras for all TSMO facilities and maintain a shift log of access control activities as prescribed in the organization's access control policy manual.

The Contractor will be unarmed while performing these duties.

The Contractor FSO shall provide personnel a SECRET level courier card IAW AR380-5, chapter 8 in order to hand carry classified material in the performance of his or her duties.

The contractor shall perform required escort, courier and classified collection/removal/destruction work at Redstone Arsenal, AL.

The contractor shall provide two employees on-site at Building 4497 Sensitive Compartmented Information Facility (SCIF) twenty-four hours a day, seven days a week. The contractor shall provide two additional employees on-site during core hours for a total of four employees during core hours with a total of three employees covering standard operating hours outside core hours.

The contractor shall collect classified trash at scheduled times from areas in the TSMO buildings and designated points within the secure area and comply with Army and local guidance to process classified waste for destruction.

4.2. Operations Directorate – G3 Task Areas

All of G3's Task Areas are covered in section 3.0.

4.3. Product Support Directorate – G4 Task Areas

4.3.1. Facilities

The contractor shall:

- Coordinate and execute the relocation of personnel, equipment, and furnishings.
- Reconfigure office spaces and cubicles as required.
- Set up and reconfigure large multi-purpose conference rooms.
- Move equipment into and out of storage spaces using manual methods, pallet jacks, dollies, and GSA vehicles.
- Perform tasks requiring lifting up to 45 pounds and repetitive motion.
- Track, review, and ensure the completeness and accuracy of facility work requests.
- Initiate follow-up actions on overdue requests and provide status updates.
- Offer expertise to customers to resolve facility-related issues.
- Participate in property accountability and asset visibility inventories.

Distribution Statement A. Approved for public release: distribution is unlimited

- Operate at least five types of Government-owned vehicles, including a box truck, 4-door sedan, 15-passenger van, 7-passenger van, and economy van, using a Standard Florida Driver's License.
- Provide expertise in the management of CPE STRI storage spaces and maintain control of all stored items.
- Execute the delivery of supply items to customers.

4.3.2. Property Book Office (PBO)

The contractor shall:

- Process, manage, and maintain all property transactions, records, and asset visibility in an Accountable Property System of Record (APSR), such as the Enterprise Logistics Management System (ELMS), Federal Logistics Information System (FLIS), and the Army Enterprise System Information Program (AESIP) family of systems resulting in an accurate accounting of organizational property. CPE STRI averages approximately 2,000 property transactions per year; most transactions are administrative.
- Apply in-depth knowledge of Army supply and property accountability regulations and directives to analyze and resolve inventory management and property accountability issues.
- Coordinate with PHRHs to ensure completeness and accuracy of property and supply documents prior to submission to the PBO.
- Execute and report monthly hand receipt validations and sensitive item inventories to the PBO.
- Participate and provide expertise in property-related audits, inspections, and investigations alongside Government personnel. Provide guidance to resolve discrepancies identified.
- Prepare and apply bar code labels for all equipment listed on primary hand receipts.
- Prepare excess equipment and supporting documentation for transport to the Jacksonville Defense Logistics Agency (DLA).
- Coordinate, lead, and participate in excess property turn-ins at DLA. CPE STRI averages approximately 100 items turned into DLA per year.
- Schedule GSA vehicles for equipment transport to DLA and perform tasks requiring lifting up to 45 pounds and repetitive motion.
- Operate at least five types of Government-owned vehicles, including a box truck, 4-door sedan, 15-passenger van, 7-passenger van, and economy van, using a Standard Florida Driver's License.

4.3.3. Cataloging and Fielding

The contractor shall:

- Execute standard fielding and item management activities as directed by the Government. CPE STRI averages approximately 700 fielding and item management transactions per year.

Distribution Statement A. Approved for public release: distribution is unlimited

- Process fielding transactions in an Accountable Property System of Record (APSR), such as the Enterprise Logistics Management System (ELMS).
- Provide supply support using systems like the Federal Logistics Information System (FLIS) and the Army Enterprise System Information Program (AESIP) family of systems in order to process:
 - Nonstandard Line-Item Numbers (NSLIN)
 - National Stock Numbers (NSN)/Management Control Numbers (MCN)
 - Manufacturing Part Numbers (MAN-P)
 - Materiel Components List (MCL)
 - Unique Item Identifiers (UII)
 - Fielding readiness reviews
- Coordinate with the Logistics Data Analysis Center (LDAC) in Huntsville to resolve cataloging and database issues related to item management; develop and coordinate mitigation strategies with the Government to address open fielding actions through completion.
- Participate in fielding, cataloging, and item management-related audits, inspections, and investigations alongside the Government.
- Coordinate, manage, and maintain publication records for CPE STRI.
- Assign and provide publication and device numbers for all CPE STRI training capabilities.
- Coordinate device number assignments with external agencies for CPE STRI training capabilities.

4.4. Acquisition Directorate – G5 Task Areas

All of G5's Task Areas are covered in section 3.0.

4.5. Chief Information Office – G6

The contractor shall:

- Review, track and process all IT Approval System (ITAS) submissions while maintaining full compliance with Army regulations and policies.
- Provide planning, implementation, and management of Army Enterprise IT and Cybersecurity projects across the Program Executive Office. Enterprise initiatives include, but is not limited to Army organizational network convergence, Hypori BYOD, Intune BYOD, Army Virtual Desktop Infrastructure (VDI), SharePoint Online migration, Army 365 adoption, software upgrade tracking and reporting, Cloud Based Internet Isolation (CBII) implementation and Army Data Tagging and Labeling.
- Provide subject matter expertise to configure, test, troubleshoot and ensure cybersecurity compliance for the Army Enterprise Security Service (AESS) implementations across the Capability Program Executive, inclusive of instances deployed across PMOs.
- Provide subject matter expertise, implementation, and interpretation for Information Technology (IT) and Cybersecurity operations across the CPE STRI, ensuring compliance with directives, Executive Order, Operational Orders, Cyber

Distribution Statement A. Approved for public release: distribution is unlimited
Tasking Order (CTO) and other tasks issued by Army CIO/G-6, ARCYBER,
NETCOM, and ASA(ALT).

- Manage Spectrum Certification, Host Nation Coordination and Frequency Coordination to ensure compliance with Army and International spectrum management policies. Develop and sustain Spectrum Supportability Risk Assessments (SSRA), and coordinate and deliver spectrum management training on policy, tools, and best practices for PMO and fielded user communities.
- Provide IT/Telecommunications subject matter expertise to assigned Integrated Product Teams (IPTs), serve as the liaison to Network Enterprise Centers (NECs), and provide actionable recommendations to enhance IT/Telecommunications capabilities. Support IPTs during on-site deployments, surveys, or fieldings as required.
- Ensure compliance with cybersecurity training requirements and manage Army Verification System (AVS) account enablement for CPE STRI personnel.
- Process and manage all requests for Enterprise License Agreements (ELA) and Joint Enterprise License Agreements (JELA) for the organization.

4.6. Business Management Directorate – G8 Task Areas

All of G8's Task Areas are covered in section 3.0.

4.7. ACC-Orlando Task Areas

All of ACC-Orlando's Task Areas are covered in section 3.0.

5. TRANSITION IN

The contractor shall provide and implement a transition plan that ensures:

- Seamless transition from current support model to Agile Program Management Model
- Ensure continuity of operations
- Minimal disruption to mission execution
- Effective implementation of Agile methodologies

6. TRANSITION OUT

- Data developed/collected during the performance of this contract will be delivered to the Government, to include a data dictionary (DI-MGMT-80897)

7. GOVERNMENT-FURNISHED EQUIPMENT AND INFORMATION

The Government will provide:

- Office space, as required, at:
 - Orlando, Florida
 - Huntsville, Alabama
- Access to required information systems
- Relevant program documentation

Distribution Statement A. Approved for public release: distribution is unlimited

- Technical data and specifications
- Access to stakeholders for Agile ceremonies and feedback

Distribution Statement A. Approved for public release: distribution is unlimited

APPENDIX A – APPLICABLE DOCUMENTS

The following U.S. Government documents form a part of this PWS. In the event of a conflict between documents referenced herein and the contents of this PWS, the contents of the PWS shall be the governing requirement.

UNITED STATES CODE (USC)

- Title 48 Federal Acquisition Regulations Systems
- Title 40 Subtitle III Clinger-Cohen Act (CCA) of 1996
- Title 44 Chapter 35 Subchapter II Federal Information Security Modernization Act of 2014 (FISMA)

DEPARTMENT OF THE ARMY DOCUMENTS

- AR 1-1 Planning, Programming, Budgeting, and Execution
- AR 11-2 Risk Management and Internal Control Program
- AR 5-11 Management of Army Modeling and Simulation
- AR 5-12 Army Use of the Electromagnetic Spectrum
- AR 25-1 Army Information Technology
- AR 25-2 Army Cyber Security
- AR 25-13 Army Telecommunications and Unified Capabilities
- AR 25-30 Army Publishing Program
- AR 25-50 Preparing and Managing Correspondence
- AR 25-400-2 Army Records Management Program
- AR 70-1 Army Operation of the Adaptive Acquisition Framework
- AR 73-1 Test and Evaluation Policy
- AR 190-13 The Army Physical Security Program
- AR 350-1 Army Training and Leader Development
- AR 380-5 Army Information Security Program
- AR 380-10 Foreign Disclosure and Contacts with Foreign Representatives
- AR 380-28 Army Sensitive Compartmented Information Security Program
- AR 380-49 Industrial Security Program
- AR 380-67 Personnel Security Program
- AR 381-12 Threat Awareness and Reporting Program (specifically paragraph 2-4.b. and Chapter 3)
- AR 500-3 U.S. Army Continuity of Operations Program
- AR 525-13 Antiterrorism/Force Protection Programs
- AR 525-27 Army Emergency Management Program
- AR 530-1 Operations Security Program
- AR 700-18 Provisioning of U.S. Army Equipment
- AR 700-131 Loan, Lease, and Donation of Army Materiel
- AR 700-144 Demilitarization and Trade Security Controls
- AR 700-145 Item Unique Identification
- AR 700-127 Integrated Product Support
- AR 702-11 Army Quality Program

Distribution Statement A. Approved for public release: distribution is unlimited

- AR 708-1 Logistics Management Data and Cataloging Policy for Army Operating Materials, Supplies, And Equipment
- AR 710-2 Secondary Item Policy and Retail Level Management
- AR 710-3 Inventory Management Asset and Transaction Reporting System
- AR 710-4 Property Accountability
- AR 715-30 Secure Environment Contracting
- AR 735-5 Relief of Responsibility and Accountability
- AR 770-2 Materiel Fielding
- AR 770-3 Type Classification and Materiel Release
- DA PAM 73-1 Test and Evaluation in Support of Systems Acquisition

OTHER DOCUMENTS

- OMB Circular A-130 Managing Information as a Strategic Resource
- NIST SP 800-53 Rev 5 Security and Privacy Controls for Information Systems and Organization
- NTIA Manual

Distribution Statement A. Approved for public release: distribution is unlimited

APPENDIX B - EXAMPLE DELIVERABLES

Examples of Documents/Artifacts/Data Products (Create, Review and/or Modify)
Acquisition Decision Memorandums (ADMs)
Acquisition Documentation
Acquisition Plans (AP)
Acquisition Program Baselines (APBs)
Acquisition Strategy (AS)
All Hazard Threat Assessment (AHTA)
Annual Program Review
Anti-terrorism Plans
Army Program Budget Briefs
Articles, photography, videography, and graphics
Audit checklist compliance verification
Audit sample
Budget Execution
CCIR incident determination and classification reports
CCIR Policy
CCIR submission packages to ASA(ALT)
Clinger-Cohen Act Compliance Checklist
Community Profile
Configuration Steering Board (CSB) package and supporting documents
Consolidated Command and Staff presentation
Continuity Exercise
Continuity of Operations Plans (COOP)
Contract Data Requirements List (CDRL)
Contract Schedule
COOP Awareness Policy
COOP Facilities Risk Assessments
Cost Analysis Requirements Descriptions (CARDs)
Cost Estimates (CE)
DA Form 1687
DA Form 2062
DA Form 2765-1
DA Form 3161

APPENDIX C – EXAMPLE E-TOOLS AND ARMY SYSTEMS

Examples of eTools and Army Systems typically in use
Army Enterprise System Information Program (AESIP) family of systems
Acquisition Information Repository (AIR)
Army Portfolio Management System (APMS)
Army Validation System (AVS)
Army Vantage
CHESS IT
COMPASS
Contract Data Requirements List-vue (CDRLvue©)
Electronic Document Access (EDA)
eMASS
Enterprise Logistics Management System (ELMS)
Enterprise Task Management Software Solution (ETMS2)
Federal Logistics Information System (FLIS)
Mechanization of Contract Administration Services, cASM (replaced PR Web),
Microsoft Office 365 (examples include: Microsoft Excel, Microsoft Project)
Microsoft Planner
Microsoft Power BI
Microsoft Power Platform
Microsoft SharePoint Online
PowerLogJ
Procurement Integrated Enterprise Environment (PIEE)
Program Management Resource Tools (PMRT)
Receipt Acceptance and Property Transfer (iRAPT)
Resource Management Tool
Standard Operation and Maintenance Army Research and Development System (SOMARDS)
Virtual Contract Enterprise (VCE)
Virtual Insight (VIS)
Wide Area Workflow (WAWF) invoices

Distribution Statement A. Approved for public release: distribution is unlimited

APPENDIX D – PM/PL PORTFOLIO DESCRIPTION

Project Manager Training Devices (PM TRADE)

PM TRADE delivers world class training devices and training support capability to America's Warfighters. This PWS defines the non-personal program support services for PM TRADE and its subordinate organizations: Product Manager (PdM) Combat Training Instrumentation System (CTIS), PdM Synthetic Training Environment Live Training Systems (PdM STE LTS), PdM Tactical Training Systems (PdM TTS), and Product Director Virtual Training Systems (PD VTS). There are 23 direct mission programs, 21 are post Milestone C and 2 are pre-Milestone B.

PdM CTIS is a Direct Mission funded organization. PdM CTIS develops, fields, and performs acquisition life-cycle management of live combat training instrumentation systems at the three Maneuver Combat Training Centers (CTCs), Home Stations and the Joint Pacific Multinational Range Capability (JPMRC) to ensure no Soldier goes into harm's way untrained. PdM CTIS products collect and process training data such as real-time casualty assessments, simulate the Current Operating Environment, facilitate exercise command and control, and provide accurate and timely training feedback to the training units. PdM CTIS products enable seamless integration of Live, Virtual, and Constructive training domains through adherence to Common Training Instrumentation Architecture (CTIA) standards.

PdM CTIS manages the following programs:

- Combat Training Center-Instrumentation System (CTC-IS)
- Joint Pacific Multinational Readiness Capability Instrumentation System (JPMRC-IS)
- Home Station Instrumentation Training System (HITS)
- Soldier Monitoring System (SMS)

PdM STE - LTS is a Direct Mission and customer funded organization. The PdM now supports missions that focus on the Force-on-Force (FoF) and Live training portions of the Synthetic Training Environment (STE). These programs are designed to enhance the warfighter's capability to prepare for combat operations allowing training and assessment of individual and collective tasks during FoF and STE operations. PdM STE - LTS collaborates with the warfighter and other System PMs to develop and procure the required training aids, devices, simulators, and simulations (TADSS) supporting their fielded weapon systems. PdM STE - LTS provides life cycle management for all these systems ensuring Soldiers receive the required skills training needed to operate in the theater of operations. PdM STE - LTS supports FoF training capabilities worldwide. In the area of FoF training programs, PdM STE - LTS is the life-cycle manager of Tactical Engagement Simulation Systems (TESS) supporting the Maneuver CTCs, Home Stations, and deployed units in FoF training. These systems are used by every Soldier in the Army in FoF training to hone collective training and individual skills. Additionally, in the areas of STE training programs, PdM STE - LTS manages the new capabilities being

Distribution Statement A. Approved for public release: distribution is unlimited
developed to add new warfighter training tasks to the live training domain (i.e., mortars, artillery, etc.).

The PdM manages the following programs:

- Live Synthetic Training Environment
- Instrumentable - Multiple Integrated Laser Engagement Systems (I-MILES)

PdM TTS is a Direct Mission and customer funded organization. These programs are designed to train and qualify Soldiers on individual, crew, and collective tasks during Live-Fire training events. These programs provide Moving / Stationary Infantry and Armor Targets (MIT, MAT, SIT and SAT), Battle Effects Systems, thermal field cameras, player units, Information Technology equipment, and After-Action Review systems. PdM TTS provides life cycle management for all these systems ensuring Soldiers receive the required Soldiers skills training needed to operate in the theater of operations.

The PdM manages the following programs:

- Digital Range Training System (DRTS)
- Future Army System of Integrated Targets (FASIT)
- Air Defense Artillery – Targets (ADA – T)
- Multiple Ground Combat System (GCS) customer programs

PD VTS is 95% customer funded with one program of record. PD VTS provides an array of immersive and innovative virtual training solutions that enable Soldiers to improve their essential skills and save lives. Directly responsible for acquisition management and execution of TADSS mission support programs. Develop virtual training systems for operator, maintenance, driver, and interactive multimedia instruction for the Army, National Guard, and other DoW partners. These immersive training capabilities provide individual to collective level training in support of multi-domain operations.

The PD manages the following programs:

- Basic Equipment Maintenance Trainer
- Family of Maintenance Trainers
- Other

Project Manager Synthetic Environment (PM SE)

PM SE provides Operationally Relevant Constructive and Integrated Simulation Environments for the Warfighter. PM SE acquires, fields, and sustains constructive and virtual simulations used to support the Army's command and staff training requirements. PM SE is composed of 4 subordinate organizations: PdM Synthetic Warrior Systems (SWS), PdM Common Synthetic Environment (PdM CSE), PD Next Generation Constructive (NGC) and Product Lead (PL) Constructive Simulations Support (CSS). The PM SE portfolio includes future training capability via the Synthetic Training Environment (STE) and current training capability via legacy programs.

The PM SE portfolio consists of the following programs:

Distribution Statement A. Approved for public release: distribution is unlimited

PdM SWS

- Reconfigurable Virtual Collective Trainer (RVCT) - STE
- Soldier Virtual Trainer (SVT) - STE
- Games for Training (GFT) - Legacy

PdM CSE

- Training Simulation Software (TSS)/Training Management Tool (TMT) - STE
- One World Terrain (OWT) - STE

PD NGC

- Next Generation Constructive (NGC) - STE
- One Semi Automated Force (OneSAF) - Legacy

PL CSS

- Joint Land Component Constructive Training Capability (JLCCTC) - Legacy
- Battle Command Training Equipment (BCTE) – Legacy
- Battle Command Training Capability – Equipment Support (BCTC-ES) – Hardware and licenses for JLCCTC user community
- Common Battle Command Simulation Equipment (CBCSE) - Hardware, licenses for software and the oversight of Facilities, Fixtures and Equipment (FFE) across multiple training sites

Project Manager Cyber, Test, and Training (PM CT2)

PM CT2 is dedicated to delivering innovative, secure, and interoperable solutions that enhance the Army's cyber, test, and training capabilities. By integrating advanced technologies, agile acquisition strategies, and lifecycle management, PM CT2 ensures the readiness and superiority of the Warfighter in multi-domain operations.

PM CT2 oversees three subordinate organizations: the Instrumentation Management Office (IMO), Product Manager Forces Training Systems (PdM FTS), and Product Manager Cyber Resilience and Training (PdM CRT).

The Instrumentation Management Office (IMO) acquires and manages test instrumentation for Army test ranges and facilities, ensuring the Army's ability to conduct rigorous developmental and operational testing. IMO serves as the executor of Army-led Office of the Secretary of War Test Resource Management Center (TRMC) Central Test and Evaluation Investment Program (CTEIP) projects and funding. IMO interfaces with Army Test and Evaluation Command (ATEC), OSD TRMC, and other stakeholders to deliver cutting-edge instrumentation solutions that meet the Army's testing needs. IMO supports a wide range of test centers, including White Sands Test Center (WSTC), Aberdeen Test Center (ATC), Redstone Test Center (RTC), Yuma Test Center (YTC), Dugway Proving Ground (DPG), and others. Additionally, IMO provides program management for several science and technology efforts under budget authorities 3 and

4, which capture advanced development and prototyping on behalf of Army and DoW customers.

The Product Manager Forces Training Systems (PdM FTS) provides high-fidelity simulators and simulation systems to the Army, U.S. Special Operations Command (USSOCOM), and Joint forces for training and mission rehearsal. PdM FTS manages programs that enable Soldiers to train on individual, crew, and collective tasks, ensuring readiness for Multi-Domain Operations. Key programs include the Intelligence and Electronic Warfare Tactical Proficiency Trainer (IEWTPT), Special Operations Aviation Training Systems, Opposing Forces Attack Aircraft Shoot-back Capability (OA2SBC), Opposing Forces Mechanized Vehicle Replication (OMVR), Opposing Forces Surrogate Wheeled Vehicle (OSWV), and Threat-Integrated Air Defense System (T-IADS). PdM FTS ensures Soldiers receive the required training to operate effectively in combat environments via real time mission rehearsals and simulations.

The Product Manager Cyber Resilience and Training (PdM CRT) delivers the Persistent Cyber Training Environment (PCTE), a critical platform supporting U.S. Cyber Command (USCYBERCOM) and the Department of War Cyberspace Workforce. PCTE enables individual, team, and force-level training, mission rehearsal, and certification exercises, ensuring the readiness and lethality of the Cyberspace Workforce. As part of the Joint Cyber Warfighting Architecture (JCWA), PCTE integrates with other JCWA elements to provide a comprehensive, interoperable cyberspace training capability. PdM CRT supports standardized Joint Cyberspace Operations Forces training while automating and simplifying the training management process.

The Threat Systems Management Office (TSMO) supports Army readiness by providing adaptive threat operations and lifecycle management to enable realistic test, training, and experimentation environments. TSMO plays a critical role in validating threat systems and capabilities for Army Test & Evaluation and supports the development of realistic live-fire environments for defense systems. TSMO's key functions include supporting Army units with decision advantage capabilities, analyzing publicly available data, and conducting advanced experimentation to address emerging threats. The organization also leads the development, procurement, and validation of threat systems, including electronic warfare, integrated air defense, and ground and aerial systems. In addition, TSMO provides cyber operations support, including specialized teams and tools to enhance security and operational effectiveness. The organization also oversees distributed range operations and provides maintenance, sustainment, and refinement of threat tactics, techniques, and procedures. Through its comprehensive operations and program support, TSMO ensures the effective execution of training and testing environments, contributing to the Army's modernization and operational readiness.

Project Lead TADSS Support Operations (PL TSO)

The mission of the Project Lead TADSS Support Operations (PL TSO) is to execute the AR 350-38 TADSS Maintenance Program; provide integrated training systems sustainment and selected training services world-wide. PL TSO provides enterprise level Life Cycle Contractor Support (LCCS) across the globe. PL TSO manages a contract that

Distribution Statement A. Approved for public release: distribution is unlimited
is an enterprise solution providing support to Army Warfighter combat readiness and serves as a comprehensive "One Stop Shop" for training services.

PL TSO Devices Supported:

Devices include, but are not limited to the Close Combat Tactical Trainers (CCTT); Mobile Close Combat Tactical Trainers (MCCTT); Reconfigurable Vehicle Tactical Trainers/Reconfigurable Vehicle Simulator (RVTT/RVS); Aviation Combined Arms Tactical Trainer (AVCATT), Non-Rated Crew Member Manned Module (NCM23), Virtual Clearance Training System (VCTS), Virtual Convoy Operations Trainer (VCOT), and the Reconfigurable Virtual Collective Trainer (RVCT).

The CIS portfolio includes, but is not limited to the Live, Virtual, and Constructive Integrating Architecture (LVC-IA), Constructive Battle Command Simulations Equipment (CBCSE), IEWTPT.

Other devices include, but are not limited to the Engagement Skills Trainer (EST) II, Basic Electronic Maintenance Trainer (BEMT), Call For Fire Trainer (CFFT) III, Reconfigurable Table Top Trainer (RT3), Stryker Nuclear, Biological Reconnaissance Vehicle (NBCRV), Avenger Table Top Trainer (AT3), Avenger Institutional Conduct Of Fire Trainer (ICOFT), Anti-Tank Guided Missile (ATGM) Basic Skill Trainer (BST), Chemical Agent Monitor Simulator (CAMSIM), High Mobility Artillery Rocket System (HIMARS) Family of Systems, Improved Moving Target Simulator (IMTS), M270A1 Multiple Launch Rocket System (MLRS) Family of Systems and Stinger Troop Proficiency Trainer (STPT).

CREW portfolio includes, but is not limited to the Aviation Trainers, Transportation (AT), Gunnery, Maintenance and Driver Trainers (GMDT) and Watercraft School TADSS.

LIVE portfolio includes, but is not limited to the Ground TESS and Other TES portfolio which includes I-MILES, Combat Vehicle (CV) TESS, Individual Weapon System (IWS) 2010, Tactical Vehicle System (TVS), Stryker Mobile Gun System (MGS) Precision TESS, Improved Target Acquisition System (ITAS) TES, TES BASE, Government Lost, Damaged/Destroyed (GLD/D), Close Combat Mission Capability Kit (CCMCK), Counter Radio Electronic Warfare, Increment 2 (CREW 2), Improvised Explosive Device Effects Simulator (IEDES), and Common Thru Sight Video – Crew Module Unit Recorder (CTSV-CMUR). The Air TESS/HITS portfolio includes Air-Ground Engagement System (AGES) II, Longbow Apache TESS (LBA TESS), Man Portable Aircraft Survivability Trainer (MAST) (Army and Joint Forces), the Light Utility Helicopter (LUH) TESS, TASS Training Aircraft Survivability Equipment Stimulation Suite (TASS)/Threat Integrated Air Defense Systems (T-IADS), and Homestation Instrumentation Training Systems/Deployable Instrumentation System - Europe (HITS/DIS-E). The Lifesaving portfolio includes Medical Simulation Training Center (MSTC) maintenance, and MSTC Instructor/Operators contract. The Joint Pacific Multinational Readiness Capability – Instrumentation System (JPMRC-IS), Oahu, Hawaii program is a standalone program/portfolio.

Distribution Statement A. Approved for public release: distribution is unlimited

CTC/Ranges portfolio includes but is not limited to the CTC program at the three Maneuver Combat Training Centers (MCTCs) – National Training Center (NTC), Ft Irwin, California; Joint Readiness Training Center (JRTC), Ft. Polk, Louisiana; and Joint Multinational Readiness Center (JMRC), Hohenfels, Germany. It also provides training support services for all approved training requirements within the Program Objective Memorandum (POM) guidelines and funding regulations directed by the DA and provides sustainment of After-Action Review (AAR) Tools for the Army Leadership to effectively evaluate the training readiness of their units. The Ranges portion is to provide effective and efficient Life Cycle management to the Department of the Army's Instrumented Ranges, Urban Operation training facilities and Tactical Engagement training devices. The Ranges and other training facilities under Ranges provide live TADSS training environments and training facilities that are realistic and challenging so that the Warfighter is equipped for all tactical situations.

PL TSO Liaison Representatives (LRs) provide effective, efficient and integrated Live, Virtual and Constructive training services through program management and contract monitoring. The LR provides oversight management, operations, sustainment and support of training aids, devices, simulations and simulators fielded to locations throughout the world.

PL TSO additionally provides support to various external customers to include ARNORTH, JMC, and Aviation Schoolhouse. The Flight School Training Support Services (FSTSS) Contract provides simulation services for the Aviation CoE rotary wing pilot training mission. Under ARNORTH PL TSO manages contracts providing training services in support of Chemical, Biological, Radiological, and Nuclear (CBRN) exercises and Defense Support to Civilian Authorities. Additionally, PL TSO supports United States Army Joint Modernization Command (USAJMC) Strategic Planning Exercise Support. Finally, PL TSO supports training and training support services for additional customers on an as-needed basis under the Warfighter Training Readiness Support (W-TRS) Enterprise contract.

Project Lead International Program Office (PL IPO)

The CPE STRI International Program Office (IPO) develops, delivers, and sustains training, testing, and information operations capabilities to build partner capacity in support of National Security objectives. The IPO operates as a Security Assistance Management Directorate and Foreign Military Sales (FMS) Program Management Office supporting the Army Security Assistance Enterprise (ASAE), enabling partner nations' training capabilities through TADSS, operations and maintenance support, contractor logistics support, training, and sustainment. With activities in every combatant command across 60+ countries the IPO works closely with foreign military organizations to identify training needs, develop joint training programs, and potentially co-develop new simulation technologies.

Security Cooperation (SC) includes activities undertaken to encourage and enable international partners to work with the U.S. to achieve strategic objectives, including interactions with foreign defense and security establishments and DoW-administered

Distribution Statement A. Approved for public release: distribution is unlimited

security assistance programs that build defense and security relationships that promote U.S. interests, develop allied and friendly military capabilities, and provide U.S. forces with peacetime and contingency access to partner nations. Such activities increase the capabilities and capacities of partners, thereby enhancing our collective ability to deter aggression and defeat extremists.

Building Partner Capacity (BPC) are SC programs and security assistance activities that are funded by U.S. Government (USG) appropriations and administered as cases within the FMS infrastructure. BPC provides defense services for the purpose of building the capacity of the partner nation security forces and enhancing their capability to support US military and stability operations, multilateral peace operations and to conduct counterterrorism, counter drug, and counterinsurgency operations.

The IPO leads the development of documentation related to requests from partner nations for FMS procurements and services. The IPO engages with Security Cooperation Office (SCO) personnel at United States (US) Embassies across the Area of Responsibility (AOR) coordinating site visits, delivery of materiel, inquiries, Letters of Requests (LORs), Price and Availability (P&A), Letters of Offer and Acceptance (LOAs), Program Management Reviews (PMRs), Case Management Reviews (CMRS), and technical questions when discrepancies occur. Additionally, the IPO provides for the development of Requirements Packages documentation for contract processing and award to include performing and documenting systems during site-surveys, form-fits, property accountability, acceptance factory testing and site acceptance testing. This support includes planning, programming, and budget execution as well as awarding and managing competitive contracts to operate, maintain and sustain deployed TADSS and manage training services/training support efforts through FMS cases and pseudo-FMS Cases funded efforts.

IPO leads an average of 175 program/contract actions per year. Program/contract actions consist of activities such as Performance Work Statement (PWS) development/revision, Independent Government Cost Estimates (IGCEs), requests for contract pricing, technical evaluations, and Purchase Requests (PRs), Program Management Reviews (PMRs) and analysis as well as activities required to close out actions and financial reconciliation for the life of the FMS case.

IPO efforts for procurement span Live, Virtual, and Constructive training devices and simulators for Ground Combat Arms Forces to include but not limited various Army TADSS for Combat Arms air and ground vehicles; procurement of training in support of multiple rotary wing aircraft; classroom, on-the-job or over the shoulder or in-flight training; Aircraft Survivability Equipment Simulation Suite (TASS) and TESS; motion, or non-motion of various aircraft model series training simulators; desktop trainers (JCATS, VBS, and JTLS-GO), as well as the sustainment and support of other training devices.

A sample of the programs within the PL IPO portfolio include:

Distribution Statement A. Approved for public release: distribution is unlimited

- CTC Instrumentation Systems – Combat Training Centers I-MILES Deployable Range Targetry, and Virtual Battle Space.
- Combat Vehicle Training Simulators – Gunnery Training Simulators, Tank Driver Trainer, Diagnostic Turret Troubleshooting Trainers, Live Engine Trainer, Advanced In-bore Marksmanship Training Enhancement System and Common Driver Trainer.
- Combat Dismounted Training Simulators – Small Army Tactical Skills Trainer, Improved Target Acquisition System –Tube-Launched, Optically Tracked, Wireless-Guided (TOW), Engagement Skills Trainer, Mobile Marksmanship Trainer, and Artillery Trainers.
- Combat Soldier MILES System – MILES, Stinger Troop Proficiency Trainer, One Semi-Automated Forces (OneSAF), Joint Fires Stationary Classroom.
- Ground Sustainment – Contract Logistics Support Includes Operations & Maintenance Support and Instructor/Operator Support for Ground System Trainers.
- Aviation LIVE - TESS, TADSS Sustainment, Mission Support, and Air Worthiness.
- Aviation Virtual – Training, Sustainment and simulators for Pilot and Maintainer, UH-60, Huey II, H-47ER, and AH-64E V6.
- Aviation Sustainment – Contract Logistics Support, Simulator Support, Instructor/Operator and Operations & Maintenance support for UH-60, AH-64, and CH-47.
- Aviation Training – Instructor/Operator and Maintainer Training Support: AH-64Ev6 and Huey II New Equipment, Pilot Transition, and Maintainer Training.
- Sustainment and Training – Products, Services, Contract Logistics Support and Training for Live Virtual and Constructive Simulations media and tools at Combat Training Centers and Institutional Training Centers.
- Non-Platform Specific Ground Collective Training – Armored vehicle day and night live fire, maintenance, and maneuver training. Special Operations Forces Training Support. Joint Simulation Training and Support. Land Forces Ground Simulator Maintenance, Fires Support, MILES Support. Joint Training and Evaluation Center Support.

Project Lead Enterprise Transformation and Integration (PL ETI)

Project Lead Enterprise Transformation and Integration (PL ETI) enables Army modernization through agile acquisition, innovation, common architecture and Modular Open System Approach (MOSA), driving synchronization across the Project Management Offices to deliver capability faster to the Warfighter. PL ETI is responsible for developing enterprise level products and services that enable agile acquisitions, rapid prototyping and technology modernization, and the transformation to an enterprise product line that supports rapid development, deployment and operations of training capabilities across the Capability Program Executive for Simulation, Training, and Instrumentation (CPE STRI) portfolio of programs. This Performance Work Statement (PWS) defines the non-personal program support services for PL ETI for the Product Lead Unified Integration

Distribution Statement A. Approved for public release: distribution is unlimited
and Transformation Enterprise (PdL UnITE) and the Training and Readiness Accelerator II (TReX II).

PdL UnITE leads the transformation of the CPE STRI enterprise to streamline a horizontal portfolio and product line management by integrating people, processes, and tools in a way that enables CPE STRI programs to rapidly develop, secure, deploy and operate training capabilities in a secure, flexible and interoperable manner. PdL UnITE is the lifecycle manager of the Common Training Instrumentation Architecture (CTIA) / Live Training Transformation (LT2) Office, ACAT IV. PdL is responsible for the UnITE Training Enclave and UnITE Development Environment both on premises and in the cArmy Cloud environment. CTIA is directly funded as an Army Program of Record. The UnITE Infrastructure and Cloud capabilities are shared cost across the CPE STRI enterprise.

TReX II is an Other Transaction Agreement (OTA) contracting tool that expedites prototype development by memorandum of agreements with the partner agencies, as well as other documents that outlines the prototype acquisition approach. Effort includes continued oversight from pre-solicitation activities through completion/final delivery of the effort on multiple programs from various agencies. The TReX II OTAs can be CPE STRI programs that are directly funded as Army Program's of Record (PoRs) or customer funded across the user community.
