MEMORANDUM FOR ALMAJCOM-FOA-DRU-PSU

FROM: AFCEC/CL
2261 Hughes Ave, Ste. 155
JBSA-Lackland TX 78236-9853

SUBJECT: Mandatory Standardization of HVAC Chiller Systems

Reference: (a) AFIMSC Memo, 26 September 2018, *Air Force Facilities and Construction Category Council Charter*

1. The Air Force Civil Engineer Center Director (AFCEC/CL) serves as the Air Force Category Manager (CM) for the *Facilities and Construction Category*. The Air Force category management charter assigns the CM the authority and responsibility for total cost management within the respective category. Using this authority, and in coordination with the AF Installation Contracting Agency (AFICA), I am directing the mandatory standardization of HVAC chiller systems to a single manufacturer at the installation level.
2. This memorandum directs all Base Civil Engineers (BCEs) to perform a comprehensive inventory analysis to identify a single manufacturer for HVAC chiller systems at their respective installations. The analysis shall be performed in accordance with AFCEC Operations Director (AFCEC/CO) published guidance; focusing on the preponderance of a manufacturer for existing systems, the longevity of each individual element within the evaluated system, and the overall total cost of ownership of the respective system. This memorandum also delegates the approval authority for the selection of a single manufacturer for HVAC chiller systems at each installation to the AFCEC/CO.
3. Due to budgetary and practical implementation constraints, a phased approach will be used in the standardization of the HVAC chiller systems. Existing non-standard HVAC chiller systems shall remain in operation until replacement due to component failure or opportune replacement as determined by the BCE. Likewise, acquisition of new HVAC chiller systems through maintenance, repair, and construction projects shall comply with this memorandum. CE Operations Flights are authorized continued use of on-hand, non-standard components until stocks are exhausted.
4. Please direct any question regarding this memorandum to my POC, Lt Col Elizabeth M. (Michelle) Harwood, DSN 523-6953, elizabeth.harwood@us.af.mil or to the AFCEC Reachback Center.

TERRY G. EDWARDS, SES
Director, Air Force Civil Engineer Center
AF Category Manager, Facilities & Construction

AFCEC/CO HVAC Standardization, Single Manufacturer Selection Guidance Memo, 3 May 2019

DEPARTMENT OF THE AIR FORCE

AIR FORCE CIVIL ENGINEER CENTER

TYNDALL AIR FORCE BASE FLORIDA

3 May 2019

MEMORANDUM FOR ALMAJCOM-FOA-DRU-PSU

FROM: AFCEC/CO

139 Barnes Drive, STE 1

Tyndall AFB, FL 32403-5319

SUBJECT: HVAC Chiller System Standardization, Single Manufacturer Selection

Reference: (a) AFCEC/CL Memo, 3 May 2019, Air Force Policy Memorandum
Mandatory Standardization of Essential HVAC System Components

1. The Air Force Civil Engineer Center Director (AFCEC/CL) serves as the Air Force Category Manager (CM) for the *Facilities and Construction Category* and he has mandated the standardization of HVAC chiller systems to a single manufacturer at the installation level. The AFCEC/CL has further delegated the authority and responsibility of administering the single manufacturer approval process to the AFCEC Operations Directorate (AFCEC/CO).
2. Standardization of all HVAC chiller systems allows the Air Force to significantly reduce the total cost of ownership which includes the initial procurement, subsequent maintenance, and associated training costs to operate the system over its lifecycle. Since standardization is a long-term strategy, Base Civil Engineers (BCEs) must perform their due diligence during the selection process to mitigate any prolonged adverse effects. This memorandum serves as AFCEC/CO's official guidance for the evaluation, recommendation, and subsequent approval of a single manufacturer for HVAC chiller systems at each installation.
3. BCEs are required to submit a Memorandum of Request (MOR) to the AFCEC/CO that clearly specifies the requested single manufacturer for HVAC chiller systems at the respective installation as well as provide reasoning and justification per the guidance set forth by this document. In turn, AFCEC/CO will issue an Official Memorandum approving or disapproving the requested manufacturer. Should disapproval be merited, AFCEC/CO shall provide explanation for all disqualifications as well as engage with the BCE directly to identify a suitable alternative.
4. The BCE shall assign a team to perform a comprehensive inventory analysis to identify a single manufacturer for HVAC chiller systems. It is recommended that at a minimum, the team be comprised of the Installation Mechanical and HVAC Systems Sub-AMP Manager, a qualified HVAC technician, and a Material Control representative. However, BCEs may elect to augment and/or enhance the composition of the evaluating team as necessary.

5. The required criteria for evaluation is as follows and shall be discussed in the narrative section of the MOR to support the selection of a single manufacturer for all HVAC chiller systems at the respective installation:

a. Selective Inventory Control Analysis: The Evaluation Team shall perform a selective inventory control analysis of the most current data contained in a BUILDER Sustainment Management System (SMS) report. Should these data not be available, the evaluation team shall conduct a physical investigation, employing any expedient methods as determined appropriate, to gather the information required. The inventory control shall be the HVAC chiller system subset with variables being (1) the manufacturer, (2) the percentage of said manufacturer represented in the overall existing inventory, (3) the total Component Replacement Value (CRV) of said manufacturer's components, and (4) the mean Remaining Service Life (RSL). This information will be used to support the selection of a single manufacturer. If two manufacturers share relatively equal representation, or if there is diverse manufacturer representation, the BCE must consider the CRV and RSL for selecting a manufacturer to ensure that the best interest of the Air Force is met.

b. Supply Chain Analysis: The Evaluation Team, in particular the Material Control representative, must perform extensive market research to determine the availability of third party vendors and/or suppliers in the local area in order to ensure (1) the local economy is able to meet future demand requirements once standardization is fully implemented and (2) there exists adequate competition amongst vendors to mitigate fluctuations of component and servicing pricing.

6. The comprehensive inventory analysis is to be repeated after five years from the date of AFCEC/CO approval for a single manufacturer. The purpose of this secondary analysis is to document the installation's progress in standardizing HVAC chiller systems, consider any changes in the decision facts, and confirm no external factors exist that may drive a reconsideration of the approved single manufacturer. Should the BCE determine that a change in single manufacturer is required, a new MOR and analysis will be accomplished.

7. Please direct any questions and/or concerns regarding implementation of this guidance to my POC, Lt Col Elizabeth M. (Michelle) Harwood, DSN 523-6953, elizabeth.harwood@us.af.mil or to the AFCEC Reachback Center.

JOHN E. TRYON, Colonel, USAF
Director, Operations Directorate
