

Limited Sources Justification and Approval (J&A)

Contracting Activity: Air Force Life Cycle Management Center / Electronic Systems & Advanced Training Capabilities (AFLCMC/ESAK)

Purchase Request / Local ID Number: [REDACTED]

Program / Project (and PE, if applicable): Legacy Voice Sustainment

Program Type (PEO or Other Contracting): PEO

Authority: Multiple Award Schedule Program ([FAR 8.405-6](#))

Estimated Contract Cost (including options): [REDACTED]

Is this a [Bridge Action](#)?

☐ Yes

☒ No

Description of Limitation:

This action procures the renewal of the T-Metrics Automated Call Distribution (ACD) Software Subscription Service (SSS) via a task order against GSA Schedule 70. The U.S. Air Force's ACD sites require direct support from T-Metrics because the company is the original equipment manufacturer (OEM) and holds the exclusive rights to the proprietary source code for the T-Metrics ACD platform.

COORDINATION ([DAFFARS 5306.304\(a\)](#))

Date [REDACTED]	Project Lead / Program Mgr / Requiring Activity [Name] [Office Symbol / Phone Number]	Signature KILPATRIC.TRAMPAS.R [REDACTED]	Digitally signed by [REDACTED]

Limited Sources Justification and Approval (J&A)

I. Contracting Activity.

Agency: Air Force Life Cycle Management Center (AFLCMC)
Contracting Activity: ESAK

II. Nature and/or description of the action being processed.

This document authorizes the new contract award of a commercial delivery order through GSA eBuy, Schedule 70, on a limited-source basis, to T-Metrics Inc. for the T-Metrics Console Extended Hours Software Subscription (TM-ACD-EXSSS-REN). This subscription service provides essential ACD software support to sixty (60) active-duty Air Force installations. The Automatic Call Distribution (ACD) capability is a critical telecommunications function that manages and prioritizes incoming call traffic by queuing and routing calls to the next available, qualified agent or call tree. This capability directly supports the Air Force Medical Operations Agency (AFMOA) by ensuring reliable call handling for medical operations across the enterprise. This justification is submitted on an individual basis.

III. Description of supplies/services required to meet agency needs.

The Department of the Air Force requires continued acquisition of the T-Metrics Automatic Call Distribution (ACD) Console Extended Hours Software Subscription to sustain enterprise call routing capabilities across active duty Air Force installations. This requirement includes all software licenses, extended hours support, maintenance, updates, and access to the proprietary intellectual property (IP) necessary to operate, configure, and integrate the ACD platform within existing Air Force medical and telecommunications environments. The ACD capability is a mission critical telecommunications function that queues, routes, and prioritizes incoming calls to the next available, qualified agent or call tree. This service is essential to maintaining uninterrupted call handling for the Air Force Medical Operations Agency (AFMOA) and ensuring operational readiness across supported locations.

Estimated Value, Appropriation, and Funding:

Anticipated Contract Type: The anticipated contract type is a Firm Fixed Price (FFP) commercial delivery order. This structure is appropriate due to the defined nature of the subscription service and the predictable cost profile associated with software licensing and support.

Major Items and Quantities: The acquisition includes the following major components:

T-Metrics Console Extended Hours Software Subscription Quantity: Coverage for sixty (60) active duty Air Force locations

Software maintenance, updates, and vendor provided technical support Quantity: As required to sustain enterprise operations

Proprietary IP access and configuration rights Quantity: As required to operate and integrate the ACD

Limited Sources Justification and Approval (J&A)

capability within Air Force networks.

IV. Identification of the justification/rationale for limiting sources and demonstration of the contractor's unique qualifications to provide the required supply/service.

Pursuant to Federal Acquisition Regulation (FAR) 8.405-6, Limiting Sources, this justification supports the placement of an order with T-Metrics, Inc. under a General Services Administration (GSA) Schedule 70. The Government requires continued support, licensing, and sustainment of the existing T-Metrics Automatic Call Distribution (ACD) system, which supports mission-critical operations. This constitutes a requirement for items peculiar to one manufacturer, as authorized by FAR 8.405-6(b). T-Metrics, Inc. is the original equipment manufacturer (OEM) and sole owner of the proprietary source code for the T-Metrics ACD platform. As the sole manufacturer, T-Metrics is the only entity capable of providing the full system-level support, updates, and modifications necessary to ensure compatibility and interoperability with the currently deployed architecture. No other vendor possesses access to the proprietary source code, technical data, or interface control documentation required to perform these essential services. This makes the services unique and highly specialized, meeting the criteria of FAR 8.405-6(a)(1)(i)(B).

While resellers may exist on the GSA schedule, they provide no added technical value. They rely entirely on T-Metrics for engineering support and would introduce unnecessary pass-through costs without increasing capability or competition. Awarding to any source other than T-Metrics would not be in the interest of economy and efficiency. It would result in substantial duplication of costs to the Government through the need for a complete system transition, reconfiguration, extensive testing, and comprehensive personnel retraining. Furthermore, attempting to transition this mission-critical communications system would introduce unacceptable delays and a significant increase in risk to the continuity of operations. Therefore, as the T-Metrics ACD system is essential to the Government's requirements and only one source is capable of providing the required services, limiting the source to T-Metrics, Inc. is necessary to ensure economy, efficiency, and uninterrupted operational capability.

V. Determination by the ordering activity Contracting Officer that the order represents the best value consistent with FAR 8.404(d).

In accordance with FAR 8.404(d), the Contracting Officer has determined that this order represents the best value to the Government. This determination is based on an evaluation of the pricing and technical factors unique to this requirement. The proposed pricing from T-Metrics is considered fair and reasonable. The pricing is derived from the vendor's General Services Administration (GSA) Federal Supply Schedule (FSS) contract, [REDACTED]. An analysis of the pricing confirms its reasonableness for this order. T-Metrics has demonstrated price stability by [REDACTED].

[REDACTED] As the original software developer and intellectual property holder, T-Metrics is able to offer this pricing directly to the Government, eliminating the additional pass-through costs and markups that would be introduced by a reseller. This ensures the Government receives the lowest possible price for this proprietary service. Considering the fair and reasonable price, combined with the fact that T-Metrics is the only source capable of meeting the Government's technical requirements without causing unacceptable operational risk, this order represents the best value to the Government.

VI. Description of the market research conducted and the results, or explain why market research was not conducted.

The Government conducted market research in accordance with FAR Part 10 to identify potential sources

Limited Sources Justification and Approval (J&A)

capable of providing support, licensing, and sustainment for the existing T-Metrics Automatic Call Distribution (ACD) system. Market research efforts included a review of commercially available ACD solutions, vendor capability assessments, and an evaluation of potential third-party providers and resellers.

The results of the market research confirmed that T-Metrics Inc., as the original equipment manufacturer (OEM) and sole owner of the proprietary source code, is the only vendor capable of providing the required services without substantial system modification or replacement. While other ACD vendors exist in the commercial marketplace, none are capable of supporting the existing T-Metrics system due to lack of access to proprietary software, system configurations, and technical data rights. Additionally, authorized resellers were evaluated and determined to provide no additional technical capability, as they rely entirely on T-Metrics for engineering support and would introduce unnecessary cost to the Government.

The Government also considered the feasibility of transitioning to an alternative ACD solution; however, such an approach would require a complete system replacement, including procurement of new hardware and software, extensive integration, testing, and retraining of personnel. This would result in significant additional cost, schedule delays, and unacceptable risk to mission-critical operations. Furthermore, replacement of the existing ACD system would require approval from the Air Force Medical Operations Agency (AFMOA), adding an additional layer of coordination and potential delay, further limiting the feasibility of pursuing an alternative source.

Based on the results of the market research and analysis, no other responsible sources were identified that could meet the Government's requirement within the required timeframe and without unacceptable duplication of cost or risk. Therefore, competition is not feasible for this requirement, and award to T-Metrics Inc. is the only viable option to ensure continuity of operations and efficient use of Government resources.

VII. Other facts supporting the justification.

Transitioning from the current T-Metrics Automatic Call Distribution (ACD) system to an alternative solution would result in substantial duplication of cost to the Government that is not expected to be recovered through competition. Such costs would include procurement of replacement hardware and software, system engineering and integration, cyber security accreditation, testing and validation, and training of personnel. Based on prior implementations of similar systems, these efforts would require significant time and financial investment, while providing no immediate operational benefit over the existing, fully functional capability.

In addition to direct costs, the Government would incur operational impacts during any transition period, including potential service disruptions and reduced system availability. Given the mission-critical nature of ACD operations, even short-term degradation in performance or reliability could adversely affect response timelines and overall mission effectiveness. Replacement of the existing system would require coordination and approval from the Air Force Medical Operations Agency (AFMOA), which introduces additional administrative burden and schedule delays. These factors collectively demonstrate that pursuing an alternative source would result in unacceptable duplication of cost and unacceptable delays to the Government. Accordingly, maintaining the current system through the only responsible source represents the most efficient and cost-effective approach, while avoiding unnecessary expenditure and operational risk.

Limited Sources Justification and Approval (J&A)

VIII. Actions the agency may take to remove or overcome any barriers that led to the restricted consideration before any subsequent acquisition for the supplies or services.

The Government recognizes that reliance on a single vendor limits competition and will continue to assess opportunities to reduce or eliminate barriers to competition for future requirements. As part of this effort, the Government will evaluate potential strategies including system standardization, acquisition of data rights where feasible, and consideration of open architecture solutions in future acquisitions. Additionally, the Government will coordinate with the Air Force Medical Operations Agency (AFMOA) to assess long-term modernization plans and determine whether transitioning to a competitively supported enterprise solution is feasible. Any future transition strategy will be evaluated based on mission requirements, cost, schedule, and risk considerations.

At this time, due to the proprietary nature of the current system and the operational risks associated with replacement, immediate competition is not feasible. However, the Government will continue to conduct market research and reassess the competitive landscape prior to any follow-on acquisitions to ensure that competition is maximized to the extent practicable. In an effort to obtain competition, and as directed by the previously approved Justification and Approval (J&A), the Government posted the requirement on the General Services Administration (GSA) 2GIT contract vehicle. It should be noted that while the 2GIT vehicle was under protest at the time of the last J&A, it is no longer under protest. Despite posting the requirement for a period of 30 days, the solicitation resulted in the receipt of no proposals, indicating a lack of market competition for this specific requirement on the 2GIT vehicle

IX. Certification by the Contracting Officer.

As evidenced by my signature above, I have determined this document to be both accurate and complete to the best of my knowledge and belief.

X. Certification by the technical/requirements personnel.

As evidenced by my (our) signature(s) above, I (we) certify that any supporting data contained herein, which is my (our) responsibility, is both accurate and complete.
