NAVAL AIR WARFARE CENTER WEAPONS DIVISION
1 ADMINISTRATION CIRCLE 575 I AVENUE SUITE 1
CHINA LAKE, CA 93555-6100 POINT MUGU, CA 93042-5049

J&A Number: 25-0162

LIMITED SOURCE JUSTIFICATION

1. Contracting Activity.

Naval Air Warfare Center Weapons Division (NAWCWD) China Lake, CA

2. Nature and/or Description of Action being Approved.

NAWCWD intends to procure Link-16 Ground Tactical system manufactured by SAIC. The new mobile Joint Range Extension (JRE) 4G transit cases and a tech refresh for existing Point Mugu Sea Range JRE units will provide an expanded Link 16 footprint and ensure total External Time Reference (ETR) capability in support of Large Force Events (LFE) and other programs that require robust Link 16 network coverage beyond what Point Mugu Sea Range is currently able to provide.

3. Description of the Supplies or Services Required to Meet the Agency's Needs (including the estimated value).

This project will upgrade Point Mugu Sea Range's existing JRE 3G and JRE Crystal servers to secure long term JRE functionality and ensure a baseline ETR capability across all TDL ground nodes. The addition of new JRE 4G mobile units will significantly expand the TDL coverage area by adding a pair of mobile JRE nodes to the pre-existing Point Mugu Sea Range's Link 16 architecture. These nodes are currently slated for deployment to the north to secure coverage over the W283 and W285 areas of the sea range. Below is a detailed breakdown of what is to be procured with a lead time of six months.

Item	SAIC Part Number	Description	Quantity	Units of Measure	Unit Price	Total Price	Ship. ARO
1/0001	53000-0- 0E1C1F20- V1000-1-US	JRE 4G Chassis Only, 2-CH 1553 card. Does not include JRE Software(JSEP).	2	Each			190 days
2/0002	5015	JRE Software Enhancement Package (JSEP). Will be installed on item 1.	2	Each			with item 1
3/0003	15206-25	Help Desk, JRE, for year 2025(12 months) Period of Performance will start on delivery of item 1 through 12 months.	2	Each			with item 1
4/0004	53100-0- 0E1C1F20- V1000-1-US	JRE 4G System, Semi-Rugged (7U) with Transit Case, Keyboard/Display and 2-CH 1553 card. This is a Tech Refresh from a 3G3 Serial #5156. Software will be transferred from old 3G3 to new 4G. See Note 1 and 2 below.	1	Each			190 days
5/0005	53000-0- 0E1C1F20- V1000-1-US	JRE 4G Chassis Only, 2-Channel 1553 card. Does not include JRE Software. This is a Tech Refresh from a 1U Serial #'s 4225 and 4226. Software will be transferred from old 1U Crystal to new 4G Chassis. See Note 1 and 2 below.	2	Each			190 days

					Total	\$430,715.00	
--	--	--	--	--	-------	--------------	--

4. Identification of the Justification Rationale (see FAR 8.405-6) and, if applicable, a Demonstration of the Proposed Contractor's Unique Qualifications to Provide the Required Supply or Service.

FAR 8.405-6(b), Items peculiar to one manufacturer.

5. Determination by the Ordering Activity Contracting Officer that the Order Represents the Best Value Consistent with FAR 8.404(d).

The SAIC JRE ground tactical data link system provides robust support for managing and analyzing tactical data links, specifically Link-16. The vendor was provided with a detailed operations requirements list, including integration needs with supported tactical data link protocols and the ability to process classified message sets.

The JRE system uniquely supports the Government's mission requirements. Other Link-16 control ground stations, such as Patuxent River, Joint Base Pearl Harbor-Hickam, Nellis AFB, 612th Air Operations Center, Ramstein, also rely on JRE as the primary tactical data link source for Link-16 operations. Its seamless integration ensures interoperability without additional development costs.

Additionally, JRE maintains a standardized architecture across the Point Mugu Sea Range, Patuxent River, Joint Base Pearl Harbor-Hickam, Nellis AFB, 612th Air Operations Center, Ramstein, facilitating efficient data sharing during mission support activities.

This equipment is critical to mission success and must be operational for Gray Flag FY25.

6. A Description of the Market Research Conducted among Schedule Holders and the Results or a Statement of the Reason Market Research was not Conducted.

A thorough market analysis was conducted to identify alternative vendors capable of meeting the specified requirements, including contacting [REDACTED] Based on informal telephone meetings and web-based searches, the responses indicated that none could fully satisfy the comprehensive requirements, processing classified secret Link-16 messages, or they would require significant custom development, leading to increase costs and delayed deployment.

7. Any other Facts Supporting the Justification that represents FAR 8.405-6 (a)(1)(i)(A).

PMSR currently has customers with emerging tactical datalink requirements. The proposed solution will provide the required capability needed to communicate with net-enabled weapons, participate in fleet exercises and allow collaborative targeting that are ETR capable. This ETR functionality provides improved network time to the tactical radio set, enhancing connectivity with participants in the datalink. Without ETR it can prove difficult, if not impossible, to connect to certain TDL participants. The proposed JRE 4G will bring PMSR to the latest capability baseline allowing it to integrate with future programs, and support simultaneous operations as needed.

The operational impact if not funded is the inability for PMSR to meet; E-2D, Network Enabled Weapons, and test program(s) requirements, as well as communicate with future test platform with ETR functionality.

8. A Statement of the Actions, if any, the Agency May Take to Remove or Overcome any Barriers that Preclude the Agency from Meeting the Requirements of FAR 8.405-1 and FAR 8.405-2 before any Subsequent Acquisition for the Supplies or Services is Made.

For the reasons set forth in Paragraph 5, no plans at this time to compete future contracts for the types of supplies/services covered by this document.

The JRE system remains the only known solution that meets mission-critical requirements, seamless interoperability with existing infrastructure, and processing classified Link-16 messages.

However, to encourage future competition, the program will continue to conduct market research to identify potential alternative vendors capable of meeting the full operational requirements. This includes engaging with industry stakeholders, assessing advancements in tactical data link technologies, and exploring options for modular or open-architecture solutions that could enable greater vendor participation.

At this time, no specific timeline for a competitive acquisition has been established. If future competition becomes feasible, an estimated date for a competitive solicitation will be provided as part of ongoing acquisition planning.
