

Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Contracting Activity: AFTC/PZZ	Purchase Request/ Identification Number: F150AY6086A002 / ACQ-26-H27
Project/Program Name: Stingray	Estimated Contract Cost (including Options): [REDACTED]

Section B: Description of the Supplies/Services Required

The 420th Combined Test Force has a requirement for Radio Frequency Isolators to be used in Flight Test ReRad Systems for the Instrumentation section. These are required to support the real-time Weapon Re Radiation during weapons carriage of various assets on the test aircraft at Edwards.

P/N	Description	QTY	Price	Total
DF9965;	2.2 - 5.15GHz SMA Dual Jct. Isolator	20	[REDACTED]	[REDACTED]

Section C: Justification for Soliciting from a Single Source

The 420th Combined Test Force (CTF) requires tRadio Frequency (RF) isolators manufactured by DiTom Microwave, Inc. to support multiple Re-Radiation (ReRad) boxes per aircraft. These ReRad boxes are mission-critical for supporting Flight Test operations. The required isolators were integrated into the original assets provided as Government Furnished Equipment (GFE) to Northrop Grumman Corporation (NGC). The Government does not own the test aircraft, nor does it hold Configuration Control over the platform. DiTom Microwave is the only vendor capable of supplying this part as the OEM of the part identified on the original engineering drawings, X2017588RC, are approved for installation. Utilizing any alternate or substitute part number is strictly prohibited. The DiTom Microwave isolators are mandated by the platform's Airworthiness Documentation. Installing an unapproved substitute would immediately violate airworthiness certifications, rendering the aircraft unsafe for flight and forcing an immediate grounding of the test platform. An alternate isolator would impact build schedules and cause delays in flight test schedules. The resulting administrative, engineering, and operational delays would cause a substantial duplication of cost to the Government, with zero added value or capability.

Section D: Efforts to Obtain Competition

Due to the strict airworthiness and configuration control constraints, full and open competition for the manufacturing of this requirement is not optimal. The required Radio Frequency (RF) isolators are highly customized components and are not available as Commercial Off-The-Shelf (COTS) items with the necessary specifications. Market research was conducted via online research yielding no other vendors capable of manufacturing this part. DiTom Microwave, Inc. has expressly confirmed they hold the proprietary data rights to this custom RF isolator design, and the configuration control drawing, X2017588RC, formally identifies them as the sole approved manufacturer. The Government must restrict the requirement to the specific DiTom Microwave part number 9965. Failure to procure this exact part number will result in an inability to install the ReRad boxes on the test aircraft.

Section E: Steps to Preclude Future Single Source Awards

This item is not commercially available off the shelf and no other supplier is available to provide this item currently. The government will continue to conduct market research for other vendors available to produce the custom RF isolators. The RF isolator is manufactured exclusively for Northrop Grumman aircraft as Government Furnished Equipment (GFE). DiTom Microwave holds proprietary rights to manufacturing of this item.

Single Source Justification (Simplified Acquisition)

Section F: Contracting Officer's Determination

I have determined, in accordance with FAR 13.106-1(b)(1), that the circumstances of this contract action deem only a single source is reasonably available.

Date	Typed Name and Rank/Grade of Contracting Officer
