

RECOMMENDATION AND DETERMINATION TO SOLICIT FROM ONE SOURCE
OR BRAND NAME

☐ I recommend that NASA, NASA Shared Services Center negotiate with Vendor Name only for Enter Supply or Service to be procured. The total estimated cost of this effort is Enter Dollar amount and the estimated period of performance or lead-time for delivery is Date.

OR

☒ I recommend that NASA, NASA Shared Services Center negotiate with only with vendors who can provide the subject band name from Marotta Controls for solenoid valves. The total estimated cost of this effort is \$ [REDACTED] and the estimated period of performance or lead-time for delivery is 12 weeks.

This recommendation is for the acquisition of supplies or services determined to be reasonably available from only one source/only one manufacture. Competition is impractical for the following reasons (please answer the questions below):

1. **What are the reasons for soliciting only the suggested source/suggested brand name?** Please provide the unique characteristics of the items or services along with the supporting rationale and the market research performed to substantiate your reason for the suggested source/brand name.

Marotta solenoid valves are being specified due to their long standing proven reliability in Stennis Space Center's critical pressurization systems, where consistent performance and tight flow/pressure characteristics are essential to safe and reliable operations. Their unique combination of pressure capability, response, and established compatibility with our existing system interfaces makes them the only validated option without requiring costly redesign or requalification.

2. **What is the impact to the government if another vendor/brand is used?** Include any dollar, schedule, or compatibility impacts if possible.

The impact to the government of using another vendor would include substantial cost and schedule delays due to the need to requalify any alternate valve for use in critical pressurization systems. Any new brand would require engineering evaluation, interface redesign, and full system testing, which could add significant expense and push schedules by weeks or months. Alternate valves are unlikely to match Marotta's flow, response, and pressure characteristics, introducing potential safety concerns and jeopardizing reliable operation of critical government facility assets.
