

AMERICAN BATTLE MONUMENTS COMMISSION

Request for Information: Commercial Off-the-Shelf Platforms for WeRemember.ABMC.gov / Burial and Memorialization Electronic Directory (BMeD)

April 8, 2026

Overview:

American Battle Monuments Commission (ABMC) is issuing this Request for Information (RFI) for market research purposes. ABMC seeks industry input on secure cloud-based commercial off-the-shelf (COTS) platforms and implementation approaches that can replace or significantly improve the current **WeRemember.ABMC.gov** environment.

ABMC requires a modern, stable, secure, and easy-to-use platform that supports both public research and internal staff operations for authoritative burial and memorialization records of approximately 250,000 burial records. **ABMC is seeking information on mature COTS alternatives that can better support mission needs with strong usability, reliability, maintainability, and overall performance, stronger vendor and integrator support, and greater long-term flexibility.**

The desired solution must support a public-facing research portal and an internal records and case-management capability. It must manage structured and unstructured data, provide accurate and responsive search, support document and media attachments, enforce role-based access, and allow ABMC staff to administer content and configuration without excessive contractor dependence. The solution should also support records management, workflow, audit support, reporting, export functions, and secure integration with external and internal data sources.

Interested vendors should address the following areas in their response.

1. Platform Overview

Please review public-facing WeRemember.ABMC.GOV and identify proposed cloud Commercial Over the Shelf products, deployment models, hosting options, and product maturity. State whether the platform(s) are delivered primarily through configuration or requires substantial custom development.

2. Functional Capabilities

Describe how the solution would support:

- public search by name, date, cemetery, unit, state, and other attributes
- internal access to supporting files, research materials, and case records
- attachment and management of documents, images, and other media
- configurable public and internal data access controls

- workflow for updates, corrections, reviews, and approvals
- export to Excel, CSV, or similar formats
- reporting, usage statistics, and audit support

3. **API and Integration Capabilities**

Describe the platform's API capabilities, including support for secure RESTful, OAI-PMH, or equivalent interfaces, data import and export, metadata exchange, bulk ingestion, record synchronization, and integration with other government or third-party systems. Identify authentication methods, access controls, logging, rate limits, documentation, and any licensing or technical constraints.

ABMC is particularly interested in API capabilities that support integration with VA's Veterans Legacy Memorial site at <https://www.vlm.cem.va.gov/>, future extensibility, and publication of approved datasets.

4. **ABMC Branding and User Interface**

Describe how the solution would support ABMC branding and visual presentation requirements for public-facing interfaces, including colors, typography, layout, logos, page templates, and other user interface elements. State which branding elements can be updated through configuration rather than custom development, and identify what ABMC staff can manage directly without contractor support.

5. **Data Migration and Reconciliation**

Explain how the solution would ingest, reconcile, and manage data from multiple sources, including structured and unstructured repositories. Address migration of current records from Knowvation's Microsoft SQL, metadata normalization, discrepancy handling, record linking, and preservation of audit history.

6. **Search and User Experience**

Describe the search features, faceted filtering, fuzzy search, OCR support, relevance tuning, accessibility, and overall usability for both the public and internal users. ABMC is particularly interested in solutions that are intuitive and require minimal training.

7. **Administration and Maintainability**

Describe what ABMC staff can configure directly, such as metadata, forms, branding, workflows, business rules, user roles, search settings, and reports. ABMC requires solutions that reduce vendor lock-in and dependence on proprietary administration tools.

8. **Security and Compliance**

Describe support for role-based access, audit logs, vulnerability management, Section 508 accessibility, secure hosting, API security, and records management capabilities appropriate for a federal environment.

9. Implementation Approach

Provide a high-level approach for discovery, requirements validation, prototype or pilot, migration, testing, training, cutover, and stabilization. Clearly distinguish between product configuration and custom development.

10. Support Model

Describe help desk support, patching, upgrades, defect resolution, service levels, and overall vendor accountability. ABMC wants to understand how the vendor will ensure reliable delivery and sustained performance after go-live.

11. Relevant Experience

Identify past performance and similar projects involving federal agencies, archival systems, memorialization platforms, cemetery systems, historical records, research portals, or records-centric platforms.

12. Rough Order of Magnitude

Provide a rough order of magnitude for licensing, implementation, migration, training, and ongoing operations and maintenance. Identify major cost drivers and assumptions.

Responses should be limited to 20 pages, excluding product literature. Please include company information, product overview, technical approach, implementation approach, relevant experience, support model, and rough order of magnitude pricing.

This RFI is for market research only. It does not constitute a solicitation or a commitment by ABMC to issue a future procurement. ABMC will not reimburse vendors for the cost of preparing a response. Information received may be used to refine acquisition strategy, requirements, and evaluation criteria for any future action.

ABMC encourages vendors to propose practical COTS alternatives and transition strategies that improve system reliability, usability, search quality, administrative control, and long-term support while preserving mission data and minimizing disruption.

Please submit your responses to Jessica Young at youngj.ctr@abmc.gov by May 8, 2026.
