A. Distance Matrix for Mainland Japan	39
B. Distance Matrix for Okinawa	40

1 . DESCRIPTION OF SERVICE.

The Contractor shall provide all personnel, equipment, and services required for the on-demand transportation of Government freight using Contractor-provided vehicles, as scheduled by the Government on any calendar day. The Contractor shall be fully authorized to operate and perform all services required by this Performance Work Statement (PWS), in accordance with (IAW) the terms of this contract and all applicable Government of Japan (GOJ) laws, regulations, and trade practices. Throughout this document, the slash symbol (/) shall be interpreted to mean "and/or".

This PWS supports the Commercial Trucking Solution Contract 2.0 (CTSC 2.0) contract, which consolidates transportation requirements for mission partners throughout Japan, including Okinawa. The scope covers a high volume of orders, estimated to exceed 10,000 annually, and encompasses both predictable, recurring missions (e.g., Commissary missions) and variable missions that fluctuate with military operations. The Contractor must be prepared to support this diverse and dynamic operational tempo.

1.1. AREA OF PERFORMANCE. The areas of performance shall be throughout Japan to meet transportation requirements. The area definition IAW the Ministry of Land, Infrastructure, Transport and Tourism of Japan (MLIT) is listed below. The Point-to-Point (P2P) routes are specified in the Pricing Exhibits.

- Hokkaido Area: Hokkaido.
- Tohoku Area: Aomori, Iwate, Akita, Miyagi, Yamagata, Fukushima.
- Kanto Area: Ibaraki, Tochigi, Gunma, Yamanashi, Saitama, Chiba, Tokyo, Kanagawa.
- Hokuriku-Shinetsu Area: Niigata, Nagano, Toyama, Ishikawa.
- Chubu Area: Shizuoka, Gifu, Aichi, Mie, Fukui.
- Kansai Area: Shiga, Kyoto, Nara, Wakayama, Osaka, Hyogo.
- Chugoku Area: Tottori, Shimane, Okayama, Hiroshima, Yamaguchi.
- Shikoku Area: Tokushima, Kagawa, Ehime, Kochi.
- Kyushu Area: Fukuoka, Saga, Nagasaki, Kumamoto, Oita, Miyazaki, Kagoshima.
- Okinawa Area: Okinawa.

1.2. TYPES OF FREIGHT. The Contractor shall transport the following property upon order issued by the Ordering Officer (OO) or the Contracting Officer (CO).

1.2.1. General Freight consists of all types and descriptions other than dangerous, hazardous, or sensitive freight as further defined below.

1.2.2. Dangerous Freight consists of items which are applied to the following GOJ laws and ordinances with revisions thereto. These items must be transported IAW such laws/ordinances. An additional charge for transporting this freight is specified in the Pricing Exhibits:

- Fire Defense Law (Law No. 186, 24 July 1948)
- Poisonous and Deleterious Substances Control Law (Law No. 303, 28 December 1950)
- High Pressure Gas Safety Law (Law No. 204, 7 Jun 1951)
- Other related laws/ordinances

1.2.3. Hazardous Freight consists of low explosives, high explosives, or such other materials of explosives listed under the following GOJ laws and ordinances with revisions thereto. These items must be transported IAW such laws/ordinances. An additional charge for transporting this freight is specified in the Pricing Exhibits:

- Explosives Control Law (Law No. 149, 4 May 1950)
- Other related laws/ordinances

Based on shipping information provided by the OO, the Contractor shall obtain a GOJ clearance from the Prefectural Public Safety Commission responsible for the area from which the explosives are shipped, and it must be carried when the explosives are being transported. In addition, the Government shall provide special (safety) instructions including truck inspection to the Contractor's driver(s) prior to releasing the truck loaded with explosives. Written instruction and inspection shall be bilingual to ensure driver(s) fully understand the contents.

1.2.3.1. As defined in the GOJ Explosives Control Law, the following Items shall not require the GOJ clearance based on net explosive weight (NEW) or quantities specified below. They shall be defined as sensitive freight specified in paragraph 1.2.4 under the contract, however, the Contractor shall not be relieved from complying with the said laws/ordinances and instruction/inspection related to hazardous freight.

- Low explosives: NEW of 200 kilograms or less.
- High explosives: NEW of 100 kilograms or less.
- Blasting caps, electric and non-electric: 40,000 each or less.
- Small arms primer: 400,000 each or less.
- Detonating cord: 6 kilometers length or less.
- Live or blank small arms ammunition (SAA) NEW of 0.5 grams or less per round: 400,000 each or less.
- Live or blank SAA NEW of over 0.5 grams per round: 200,000 each or less.
- Other explosive materials not listed above: NEW of 100 kilograms or less.

Remarks: When transporting two or more items mentioned above on the same truck, NEW or quantity of the items shall be divided by the applicable weight or quantity specified above, and the sum of the percentages shall not exceed 100% IAW GOJ Explosives control Law and applicable ordinances. In case the sum of the percentages exceeds 100%, a GOJ clearance is required, and the items shall be transported as the hazardous freight under the contract.

1.2.4. Sensitive Freight consists of any freight which requires a high degree of protection while in transit as designated by the OO. An additional charge for transporting this freight is specified in the Pricing Exhibits. It includes explosives which do not require a GOJ clearance under the GOJ Explosives Control Law (See paragraph 1.2.3 above).

1.3. TYPES OF TRANSPORTATION SERVICES (FAMILY). There are nine (9) types of required transportation services: General Trucking, Reefer Trucking, Oversized/Overweight Trucking, ISO Container Trucking, Air-suspension Trucking, Material Handling Equipment, and Multimodal Transportation (Ferry, Rail, and Air). The specific requirements, specifications, and capabilities for each service category are defined in their corresponding **Technical Exhibits (See Section 8)**. The Contractor shall provide transportation services to cover one and/or all the categories of services as listed in the Technical Exhibits. When a modification only affects the requirements of a specific service family, the scope of the update will be limited to the corresponding Technical Exhibit.

2. SPECIAL REQUIREMENTS.

2.1. GOVERNMENT SECURITY GUARDS. The Government reserves the right to furnish security guards or military police escorts for any or all vehicles performing services under this contract. If required by the OO, the Contractor shall permit one (1) security guard or escort to ride on any vehicle at no additional charge. The Contractor is not required to provide return transportation for the security guard to the point of origin. In the case of Dual Driver Protective Service, the Government will provide transportation for the alternate driver.

2.2. DUAL DRIVER PROTECTIVE SERVICE (DDP). Any truck transporting sensitive or hazardous freight shall be manned by two (2) drivers possessing applicable driver's licenses. The loaded vehicle shall be attended at all times by at least one of the drivers. During brief, necessary stops, this driver must remain in the vehicle's cab or within 25 feet of the vehicle, and not in the sleeper berth. The OO will require drivers to have

company-verified reliability checks, consistent with the standards applied to similar shipments for the Japanese Self-Defense Forces (JSDF). For shipments under Dual Driver Protective (DDP) service, both drivers must sign DD Form 1907 upon assuming responsibility for the shipment.

2.3. SAFETY REQUIREMENT FOR ARMS, AMMUNITION AND EXPLOSIVE (AA&E)

TRANSPORT. The Contractor may be required to provide trucks with wood beds when directed by the OO. The Government will nail wood-blocking and brace to the wood truck floor IAW the applicable regulations at the loading points. The Contractor shall comply with the following requirements when transporting arms, ammunition and explosives (AA&E) (Reference: C3.3 and C3.16, DOD 4145.26-M, most recent version.)

2.3.1. Procedures for AA&E Transport. For AA&E shipments, the Contractor may be subject to the following procedures specified by the OO prior to transporting AA&E shipments, as a minimum:

- (a) Breaks shall be set and the wheels chocked when the possibility exists that the vehicle could move during loading or unloading.
- (b) AA&E shall not be loaded or unloaded when a motor vehicle's engine is running, unless the engine is providing power to accessories used in the loading and unloading, such as mechanical handling equipment.
- (c) Motor vehicles transporting AA&E within the installation but outside the explosives area shall bear at least two appropriate placards identifying the hazard division of the AA&E. These placards should be removed or covered whenever the vehicle is not loaded. Reflectorized placards are preferred.
- (d) The vehicle operator shall be trained in emergency procedures to be followed in the event of a vehicle fire, breakdown, accident, damaged or leaking containers, and spilled AA&E material.
- (e) In the case alternate procedures are required by the OO, coordination will be done prior to performance. Cancellation premium shall not apply if Contractor vehicle fails to meet the coordinated procedures to perform.

2.3.2. Pre-load and Arrival Inspections for AA&E Transport. For AA&E shipments, the Contractor may be subject to the following inspections to ensure safe and efficient transportation:

2.3.2.1. Pre-Loading Motor Vehicle Inspections:

- (a) Vehicles are in safe operating condition.
- (b) Batteries and wiring are not in contact with containers of AA&E.
- (c) Exposed ferrous metal in the interior of the vehicle body is covered with non-sparking material when scrap and bulk explosives are being transported in containers that could be damaged or when explosives could otherwise become exposed.
- (d) A serviceable portable fire extinguisher of the appropriate class is carried on the motor vehicle IAW the referenced manual and the local standards.

2.3.2.2. Arriving Motor Vehicle Inspections:

- (a) Vehicles loaded with AA&E shall be inspected upon arrival at remote sites. If no problems are found vehicles may be opened for interior inspection or moved to a designated unloading location.
- (b) Motor Vehicles loaded with AA&E that are suspected of being in a hazardous condition shall be moved to a truck site that is separated from other potential explosion sites or exposed sites by the applicable

quantity distance criteria.

- (c) Vehicle should be inspected by the Government Quality Assurance Specialist (Ammunition Surveillance) personnel and the Contractor after unloading AA&E to ensure that they are clean and free from loose explosives and flammable materials and that placards and vehicle certificates have been removed. Explosives waste cleaned and removed from the floors shall be disposed properly.
- (d) In the case alternate inspections are required by the OO, coordination will be done prior to performance. Cancellation shall not apply if Contractor vehicle fails to meet the coordinated inspections to perform.

2.3.3. Markings of Vehicles. Vehicles transporting explosives on public highways shall display prominent explosive signs on both the front and rear. These signs shall be approximately 38 centimeters (15 inches) square, featuring a white Japanese Kanji or symbol for 'explosive' in white on a red background. For nighttime transport, the markings shall be clearly visible from the front and rear at a minimum distance of 150 meters (492 feet).

3. OPERATIONAL REQUIREMENTS.

The Contractor shall perform services when scheduled by the OO at any time during any calendar day to meet the established loading and unloading dates and times. The Contractor is required to follow the operational definitions and requirements described below.

3.1. ORDERING. The Contractor shall transport freight IAW the OO's instructions to meet all established loading and unloading schedules. Oral requests (e.g., telephone) are not considered valid orders unless and until they are confirmed in writing via electronic mail. In case of urgent requirements, preliminary directions may be given orally but must be followed by written confirmation. The OO has broad discretion in determining the level of detail and specificity of individual transportation actions to meet the unique needs of their mission. When an order for services is placed with the Contractor, the OO will typically specify the loading and unloading points, reporting time and date at loading and unloading points, size and type of truck, nature of freight, estimated weight/cubic measurement including quantity, route requirements, advance delivery requirements for Contractor-owned container chassis, and ferry/rail/air service, if required.

3.1.1. Ordering Procedures and Fair Opportunity. All services under this contract shall be ordered IAW the following procedures, which are based on the estimated dollar value of the requirement and adhere to the principles of Fair Opportunity as set forth in the Federal Acquisition Regulation (FAR).

3.1.1.1. Ordering Procedures. Services shall be ordered via either a Task Order issued by the Contracting Officer (CO) or a smaller-scale order placed by a duly appointed OO, as detailed below.

- (a) Orders Below the Micro-Purchase Threshold (MPT): For requirements with an estimated value below the current Micro-Purchase Threshold (MPT), a Fair Opportunity process is not required. An OO may place an order directly with the Contractor that is deemed to provide the best value and is most advantageous to the Government.
- (b) Orders Above MPT up to \$25,000: For requirements with an estimated value exceeding the MPT but not exceeding \$25,000, the OO shall consider Fair Opportunity among all contract holders within the relevant "Family" (as defined in Section 1.3.). The OO will place the order with the Contractor selected based on this consideration.
- (c) Orders from \$25,001 up to the Simplified Acquisition Threshold (SAT): For requirements with an estimated value exceeding \$25,000 but not exceeding SAT, the Government will provide a Fair Opportunity to all contract holders within the relevant "Family." The CO will provide the final approval for any order in this tier.

(d) Orders Exceeding SAT or In-Scope, Unpriced Requirements: A formal Fair Opportunity Proposal Request (FOPR) process, culminating in the issuance of a Task Order by the CO, is required for two distinct types of requirements:

- (1) High-Value Requirements: Any requirement with an estimated value exceeding SAT.
- (2) Unpriced, In-Scope Requirements: Any requirement that the CO determines to be within the general scope of the contract but is not specifically priced in the PWS or its associated Price Exhibits. This formal process is required regardless of the estimated dollar value of the requirement.

The CO will determine the appropriate pool of contract holders for each FOPR, which may be defined by "Family," geographic region, required capabilities, or may include all contract holders, as deemed in the best interest of the Government. Based on the evaluation of proposals received in response to the FOPR, the CO will issue a firm-fixed-price Task Order to the successful Contractor(s).

3.1.1.2. Changes Exceeding Ordering Officer (OO) Authority: If a proposed change would cause, or is reasonably expected to cause, the cumulative value of an order to exceed the OO's delegated authority (e.g., \$25,000), the following process shall apply:

- (a) Contractor Notification: The Contractor shall immediately notify both the CO and the OO before proceeding with any work associated with such change.
- (b) Conditional Authorization: The Contractor may proceed with such change only upon direction from the CO. In situations where delays could materially affect mission requirements, as determined by the Government, directions may be provided by an authorized representative designated by the CO. Such directions may be provided verbally or via electronic communication, provided that written confirmation is issued as soon as practicable thereafter.
- (c) Limitation on Work: In the absence of CO direction, the Contractor may continue performance only within the current authorized order value.
- (d) Unauthorized Work: Any work performed without CO authorization may be considered unauthorized and not compensable.

3.1.1.3. Payment Procedures. The Transportation Officer will issue a Bill of Lading (BL), using USFJ Form 334EJ or a Commercial Bill of Lading (CBL), for each shipment. The BL serves as the primary record for shipping services and as a supporting document for all invoice verification.

(a) BL Issuance Process and Conditions:

- (1) Content of BL: To ensure clarity for payment, the Transportation Officer shall specify the terms and conditions for which payment is due (e.g., size/type of truck ordered, ferry routes, authorized accessorial services) in the "Remarks" column of the BL.
- (2) Issuance Timeline and Exchange: The Government shall provide one (1) original (or in a digital format) BL to the Contractor within fifteen (15) calendar days after the shipment is completed.
- (3) Lost BL Procedure: In the event an original BL is lost, rendered unusable, or destroyed, a Certificate in Lieu of Lost Bill of Lading (USFJ Form 376EJ) shall be used to document the shipment.

(b) Methods of Payment:

- (1) **Primary Method (Syncada):** The primary method for all payments under this contract shall be via Syncada. The Contractor shall submit invoices through the Syncada system for all services, unless an alternative method is authorized.
- (2) **Alternative Method (Legacy Payment):** In circumstances where the primary Syncada system cannot be utilized, an alternative Legacy payment method, such as the one provided by DFAS, is authorized for processing payments. This legacy approach can be employed under specific conditions such as, when Syncada is unavailable due to systemic or technical failure, or when the specific service type, like standalone BAS charges or Multiple-TAC, cannot be processed through Syncada. Additionally, its use is authorized if both parties have mutually agreed in writing to employ the Legacy method for a particular transaction because of operational constraints.

(c) **Invoicing and Certification for Legacy Payments:**

- (1) The BL (USFJ Form 334EJ) and BAS (USFJ Form 416EJ) shall not be used as direct payment instruments. Their use is restricted to supporting documentation for invoices, primarily in Legacy Payment cases as defined in paragraph (b)(ii). The Contractor is strictly prohibited from invoicing the same service through both Syncada and a Legacy payment system. The submission of a duplicate invoice shall be grounds for corrective action as stipulated in this contract.
- (2) **Certification Requirement:** For any invoice submitted for Legacy payment, the Contractor must provide the following written certification: "The Contractor certifies that the services described in this invoice have not been submitted for payment through Syncada and no duplicate payment has been or will be requested for these services."

3.1.2. Ordering Deadline. The specific ordering deadline for each service category is detailed within the corresponding Technical Exhibits. Contractors shall refer to the applicable Technical Exhibit(s) for all ordering time requirements. The term "business days" used herein covers Monday through Friday excluding United States Federal holidays specified at Paragraph 4.10. Orders completed after 14:00 JST shall be considered as the next business day order.

3.2. LOADING AND UNLOADING. Unless specified otherwise in the shipping documentation for a given shipment, all freight shall be loaded and unloaded by the Government. When the Contractor is required to perform loading and/or unloading services, such as forklift or crane operations, the requirement shall be explicitly stated in the written instructions authorizing the shipment. For the purposes of this section, "written instructions" may include, but are not limited to, a formal Task Order, an explicit notation in the "Remarks" column of the BL, or a direct email communication from the OO. Regardless of which party performs the loading and unloading, the Contractor shall not be relieved from responsibility for the proper stowage and securing freight against loss, damage, or spoilage while freight is in transit.

3.2.1. Stuffing, Unstuffing, Mounting and Dismounting of Containers. Stuffing, unstuffing, mounting, and dismounting of containers shall be performed by the Government. However, the Contractor shall not be relieved from the responsibility for the proper stowage and securing of freight against loss or damage while in transit. As required, the Government reserves the right to reposition the Contractor's chassis while performing stuffing, unstuffing, mounting or dismounting on a Government Installation.

3.2.2. Loading and Unloading Time (Free Time). The Contractor shall provide loading and unloading time of one (1) hour at no additional cost to the Government for all types of transportation services (Family). Loading and unloading time begins at the time transport arrives or is placed by the Contractor at the freight loading or unloading point within each installation and notice is given to and acknowledged by the OO or designated representative. Pre-cooling for loading shall not be included in the free time for Reefer Trucking Services.

3.2.3. Delayed Loading and Unloading for Containers. If stuffing or unstuffing cannot be completed within

the allowable time, at the discretion of the OO, the container may be off-loaded from the truck and left at the Government installation, and the truck will be released. In this case, stuffing and unstuffing shall normally be completed within two (2) calendar days of the date of transport (including date of the delivery).

3.3. COST OF OPERATION. All costs of operation under this contract shall be borne by the Contractor, including but not limited to licenses, administrative costs for pass applications and document collection, toll fees, costs of overtime/Sunday or holiday work, ferry charges, or for operations during stormy or inclement weather. The only exception is for pre-authorized as Accessorial Services. As a general guideline, toll roads shall be utilized for all medium range (100-445 km), long range (over 450 km) and inter-prefectural routes, unless usage is deemed impractical for a specific route or is determined not to be in the best interest by both parties.

3.4. POINT-TO-POINT (P2P) AND DISTANCE TABLE.

3.4.1. P2P Routes. The pricing for transportation services under this contract is, in principle, applied as a fixed price based on "P2P Scheduled Routes" connecting specific origins and destinations, as defined in the Pricing Exhibits. This pricing structure is intended to enhance predictability for both parties.

3.4.1.1. Definition and Application. A P2P Scheduled Route refers to a one-way transportation service between a specific origin (e.g., Sagami General Depot) and a specific destination (e.g., US Fleet Activities Yokosuka), as explicitly defined in the Pricing Exhibits. When the Government requests a service corresponding to a P2P Scheduled Route, the applicable fixed price listed in the Pricing Exhibit for that route shall generally be applied, unless otherwise determined by the CO, as the total cost, inclusive of all standard operational expenses (including fuel, labor, payment associated fee and tolls). No additional charges shall apply, except under specific conditions separately defined in this PWS. These P2P Scheduled Routes have been selected as frequently used segments based on historical usage data.

3.4.1.2. Route Deviations. If, during the execution of a P2P Scheduled Route, a deviation from the original route or an additional stop is directed by OO, the service may be reclassified as a "Distance Rate" as determined by the CO and the pricing formula in Section 3.4.2. may apply. The determination of whether a deviation is minor or significant shall be made by the CO, acting reasonably, based on factors including, but not limited to, additional distance and operational impact. The Contractor shall promptly notify the CO of any such service-altering instructions.

3.4.2. Distance Rates. This section establishes a distance-based rate structure to calculate pricing for "Custom Routes" not listed in the P2P routes in a fair and transparent manner. This rate structure, while aligned with the principles of standard fare systems published by the MLIT, is a contract-specific table rate that simplifies application by consolidating all of Japan into two (2) distinct pricing blocks.

3.4.2.1. Definition of Pricing Blocks. For the application of distance-based rates under this contract, the following two pricing blocks are established:

- (a) Mainland Block: Applies to all origins, stop-overs, and destinations within Hokkaido, Honshu, Kyushu, Shikoku, and their associated islands connected by bridges or tunnels.
- (b) Okinawa Block: Applies to all origins, stop-overs, and destinations within Okinawa Main Island and other islands in the Okinawa Prefecture.

3.4.2.2. Price Calculation Process. The price for a Distance Rate Table shall be determined according to the following process:

- (a) Calculate Transportation Distance and Duration: The chargeable distance shall be defined as the distance of the freight movement segment only, from the point of cargo pick-up (Point A) to the point of final cargo delivery (Point B). This distance, along with the estimated duration for the entire service period (including

positioning and de-positioning), shall be calculated based on the most efficient commercial route. Deadhead mileage (i.e., travel from the Contractor's garage to Point A, and from Point B back to the garage) is not separately billable and is considered incorporated into the overall rate structure.

- (b) **Finalize Price:** The price shall be determined based on the total freight transportation distance as follows:
- (1) For distances up to 200km: The final price is the sum of the applicable "Distance (KM)" rate and the "Duration (HR)" rate, as specified for the corresponding distance bracket in the Pricing Exhibit.
 - (2) For distances over 200km: The base price for the initial 200km (i.e., the sum of the rate for the "up to 200km" distance bracket and the total estimated duration rate). PLUS, for the distance segment from 201km up to 500km, the incremental charge listed in the Pricing Exhibit ("Additional amount per 20km increment") is applied for each full or partial 20km block beyond 200km. PLUS, for the distance segment over 500km, the incremental charge listed in the Pricing Exhibit ("Additional amount per 50km increment") is applied for each full or partial 50km block beyond 500km.

The price determined by the Distance-Based Rate Tables is comprehensive and shall be inclusive of fuel, labor, payment associated fee, and highway/toll fees for the specified segment. No additional charges will be permitted, except as otherwise stipulated in this PWS.

3.4.3. Repetitive Orders Of Items In Distance Table. Reserved Items in "P2P" Groups in the Pricing Exhibits are to be used for unforeseen requirement. When repetitive orders are required for a specific service under the rates indicated in the Tables, upon written request of either the Contractor or the Government, the said service may be incorporated into the "P2P" pricing exhibit by way of a supplemental agreement to the contract.

3.5. ROUTES NOT LISTED IN THE PRICING EXHIBITS. Occasionally, an OO will have a transportation requirement that is not currently covered either by the P2P routes or the standard distance rate tables. In these cases, the CO will place orders via FOPR.

3.6. CONTRACTOR-PROPOSED ALTERNATE EQUIPMENT. In the event of the non-availability of specified equipment, the Contractor is permitted to propose the use of alternate equipment, provided it offers capabilities that are equivalent or superior to those specified for each Exhibit Line Item Number (ELIN). Any such proposal must adhere to the following conditions and procedures:

- (a) **Conditions for Proposal:** A proposal for substitution must be supported by technical documentation that clearly demonstrates the alternate equipment meets or exceeds all critical performance aspects of the required equipment (e.g., load capacity, temperature control, security).
- (b) **Approval Process:**
 - (1) **Submission:** The Contractor shall submit a written request for substitution to the OO and CO for review. To ensure timely consideration, requests shall be submitted at a reasonable time in advance of the required service date.
 - (2) **Review and Consent:** Substitution is permissible only under the express prior written consent of the CO. The CO, in consultation with the OO, will evaluate the proposal based on technical equivalence, operational suitability, and the best interest of the Government.
 - (3) **Final Authority and Responsibility.** The CO's decision to accept or reject a proposed substitution is final. This clause does not obligate the Government to accept any proposed alternative, nor does it relieve the Contractor from the responsibility of providing the originally specified equipment if the substitution is not approved.

- (4) **Cost Savings Consideration:** If a proposed substitution results in cost savings to the Contractor, the Contractor's proposal shall include a plan for sharing those savings with the Government. The CO will consider the proposed cost savings as a factor in the approval decision. Acceptance of the substitution may be conditioned upon a downward adjustment of the contract price.

3.7. ACCESSORIAL SERVICES.

3.7.1. Retention. When specifically scheduled by the OO, the Contractor shall leave a loaded truck in the designated Government installation overnight or for other extended periods outside of normal working hours. The specific start and end times for any required layover period shall be explicitly stipulated in each individual order, and the Contractor shall ensure their vehicle remains at the designated location for the entire directed period. This service shall be priced IAW the applicable "Vehicle Detention" or "Overnight Layover" rates as specified in the Pricing Exhibits, based on the times defined in the order.

3.7.2. Demurrage. If through no fault of the Contractor, a vehicle is not loaded and dispatched or discharged and released within the allowable free time as specified in paragraph 3.2.2., the Contractor shall be entitled to demurrage for detention of the vehicle by the Government. For purpose of payment thereunder, the full half hourly rates shall be paid for any period of time up to and including 30 minutes. The Contractor shall submit a request for demurrage to the OO within thirty (30) calendar days following incurrence of the said charges. In the event the Contractor fails to submit such a request for demurrage as herein required, the Government shall be relieved from all responsibility for such a request unless the Contractor's delay in submitting the said request is due to circumstances beyond the Contractor's control, as determined by the CO. Demurrage shall apply only when the delay is unplanned and not pre-authorized in the order. When an extended retention is scheduled in advance by the Government, the applicable Retention charges shall apply instead of demurrage. Under no circumstances shall both charges apply simultaneously for the same period.

3.7.3. Cancellation. In the event a scheduled service is cancelled, rescheduled, or postponed by the Government, cancellation charges, as specified in the Pricing Exhibits, shall apply. The applicable charge is determined by when the cancellation notice is received, based on the day of service, as follows:

- (a) **Two-Day Prior Cancellation:** Applies to any cancellation notice received on the calendar day 2 days prior to the day of service from 00:00 to 23:59.
- (b) **One-Day Prior Cancellation:** Applies to any cancellation notice received on the calendar day preceding the day of service from 00:00 to 23:59.
- (c) **Same-Day Cancellation:** Applies to any cancellation notice received on the day of service after 00:00.

These charges shall apply regardless of whether the Contractor's vehicle has been positioned at the loading point. In the case when the truck is held after the expiration of the free time and the transportation is subsequently cancelled by the Government, a cancellation charge equal to the scheduled transportation charge multiplied by the applicable cancellation rate, or the total demurrage charges accrued for the entire period the truck was held. Demurrage shall not be paid in addition to the cancellation charge and only the greater of the two amounts shall be payable.

In the event the service is scheduled, and the requirement is cancelled after the Contractor has obtained all clearances for transportation of hazardous freight from the Public Safety Commission(s) of GOJ, the Contractor shall be entitled to cancellation charge by submitting evidence to the OO. However, the cancellation charge shall not be accrued when the shipment is rescheduled or postponed due to military necessity within the allowable period of the clearance certificate. Cancellation charges shall not exceed 100% of the total order value.

3.7.4. Short-Notice Service Premium. If an order is placed after the established Ordering Deadline specified in the applicable Technical Exhibit, the Contractor shall be entitled to a billable "Short-Notice Service Premium"

to compensate for the operational disruption and expedited resources required. Offerors may propose premium rates between 0% and 50%, to be applied as a percentage uplift to the base transportation cost. Proposed rate shall be subject to evaluation for price reasonableness, and the CO reserves the right to determine the acceptability of such rates. The applicability of the Short-Notice Service Premium shall be determined at the time of order placement by the OO. If an order to which this premium has been applied is subsequently cancelled by the Government, any applicable cancellation charges shall be calculated based on the total order value, inclusive of both the base transportation cost and the Short-Notice Service Premium. For the purpose of cancellation calculations, the Short-Notice Service Premium shall be considered applicable only after the Contractor has confirmed acceptance of the order. If an order is cancelled prior to such confirmation, the Short-Notice Service Premium shall not apply.

3.7.5. Midnight and Early Morning Surcharge. When specifically directed by the OO, the Contractor shall commence the service between 2200 hours and 0500 hours. An additional charge is specified in the Pricing Exhibits.

3.7.6. Winter Premium.

- (a) When the Contractor performs service to/from/within Tohoku/Hokuriku-Shinetsu Areas during the period from 1 December through 31 March, a premium shall be applied as a percentage of the applicable base price per truck per movement, as specified in the Pricing Exhibits.
- (b) When the Contractor performs service to/from/within Hokkaido Area during the period from 16 November through 15 April, a premium shall be applied as a percentage of the applicable base price per truck per movement, as specified in the Pricing Exhibits.

3.7.7. Material Handling Equipment. Accessorial MHE is defined as material handling equipment (e.g., forklifts and cranes) required for the direct purpose of loading freight onto, or off-loading freight from, a transportation asset (e.g., a truck) being provided by the same Contractor under the same transportation order. This service is considered subordinate to the primary transportation service. If MHE is required for any other purpose, or to service a conveyance not operated by the same Contractor under the same order, it shall not be ordered as an accessorial service. The specific types, sizes, pricing, and ordering rules for Accessorial MHE are detailed within the applicable Technical Exhibit for the primary transportation service being ordered. The service shall be billed IAW the "Accessorial" rates specified in the corresponding Pricing Exhibit, and not as a stand-alone service.

3.7.8. Reimbursable Expenses. The Expenses ELIN shall be used for the reimbursement of incidental Contractor expenditures that are essential for the direct performance of this PWS, subject to the conditions below. Reimbursement shall be made at actual cost, based on a legible, unaltered receipt. Reimbursement expenses shall not include any costs already covered under other contract line items, including cancellation charges. No handling fees, administrative charges, or profit shall be applied to these reimbursable expenses. All claims must be auditable and verifiable.

- (a) Pre-Approved Specific Costs: The following costs may be reimbursed provided they are deemed reasonable and are approved by the OO, whenever practicable, prior to being incurred:
 - (1) Paid parking fees.
 - (2) Costs reasonably incurred in connection with obtaining hazardous freight permits, and, where applicable, cancelling such permits, including administrative, documentation and third-party service fees.
 - (3) Ferry transport, but only for routes not listed in Pricing Exhibit G and when specifically authorized by the OO for a given order.

- (b) Other Unforeseeable Costs (Exceptional Basis Only): In exceptional circumstances, other types of direct, unforeseeable costs may be considered for reimbursement. Reimbursement for any cost not explicitly listed in paragraph (a) above requires the explicit, prior, and written approval of the CO. The Contractor must provide a detailed justification explaining why the cost is necessary and was unforeseeable. Approval by an OO is not sufficient for this category.

3.8. CALCULATION OF CHARGES. Additional charges shown in percentages shall be calculated based on unit price listed in the Pricing Exhibits (including Distance Rate Tables).

- (a) In case the items loaded on a truck are commingled with general/dangerous/hazardous/sensitive freight, the charge is calculated based on the highest rate specified in the Pricing Exhibits.
- (b) If more than one (1) increase percentage is applicable, adjustments for such percentages will be made prior to calculation of transportation cost, e.g., if a 30% increase and 5% increase are applicable, transportation charge will be calculated by increasing the price by 35%.
- (c) All final calculated charges for each line item shall be rounded to the nearest whole Japanese Yen (JPY). For rounding purposes, any fraction of a Yen amounting to 0.5 or greater will be rounded up to the next whole Yen, and any fraction less than 0.5 will be rounded down.

3.9. DISTANCE MATRIX.

- (a) For Mainland Japan Including Hokkaido: The official addresses listed “In the Clear Address List” of the Military Traffic Management Bulletin (MTMB) No. 2 “Official Table of Highway Distances, Japan” as revised, shall be used as origin and destination locations for distance calculation. P2P routes and the distance matrix for major installations are specified in Appendix A. For transportation between locations identified in Appendix A, the Ordering Office may utilize reliable commercially available tools (e.g., Google Maps (<https://www.google.com/maps/>), Navitime (<https://www.navitime.co.jp/>)) at the time of order placement.
- (b) For Okinawa: P2P routes and the applicable distance matrix are specified in Appendix B.
- (c) Distance shall be established at the time of order placement and shall not be subject to retroactive adjustment unless an error is identified. In the event of discrepancies, such discrepancies shall be resolved by mutual agreement of both parties and in coordination with 374 CONS/PKS.

3.10. HUMANITARIAN ASSISTANCE AND DISASTER RELIEF. The services under this contract may be used to support operations conducted in an emergency environment, including humanitarian assistance and disaster relief. Any such services will be ordered IAW the ordering procedures of this contract and are subject to Contractor availability and operational conditions.

4. GENERAL INFORMATION.

4.1 NON-PERSONAL SERVICES. The Government shall neither supervise Contractor employees nor control the method by which the Contractor performs the required tasks. Under no circumstances shall the Government assign tasks to, or prepare work schedules for, individual Contractor employees. It shall be the responsibility of the Contractor to manage its employees and to guard against any actions that are of the nature of personal services or give the perception of personal services. If the Contractor believes that any action constitutes, or is perceived to constitute personal services, it shall be the Contractor's responsibility to notify the CO immediately.

4.2 BUSINESS RELATIONS. The Contractor shall successfully integrate and coordinate all activity needed

to execute the requirement. The Contractor shall manage the timeliness, completeness, and quality of problem identification. The Contractor shall provide corrective action plans, proposal submittals, timely identification of issues, and effective management of subcontractors. The Contractor shall seek to ensure customer satisfaction and professional and ethical behavior of all Contractor personnel.

4.3. GOVERNMENT CONTRACT MANAGEMENT.

4.3.1. Contracting Officer (CO) Operates out of the 374th Contracting Squadron at Yokota Air Base, Japan. The CO will designate personnel authorized to order services. The CO is responsible for ensuring performance of all necessary actions for effective contracting, ensuring compliance with the terms of the contract. The CO is also authorized to order all actions under this contract to the extent of the authority delegated in their CO's warrant.

4.3.2. Transportation Officer (TO). A Government official with the inherent functional authority to issue and manage transportation-related documentation, including the Bill of Lading (BL). This authority is separate and distinct from any ordering authority.

4.3.3. Ordering Officer (OO). A Government representative who has been formally appointed in writing by the Chief of the Contracting Office (or their designee) to place orders for routine, smaller-scale services under this contract. The OO's authority is strictly limited to the scope defined in their letter of appointment. The OO is not authorized to direct any change that would affect contract price, scope, or terms and conditions. Any such direction must be issued or ratified by the CO. In the event of a conflict between OO direction and contract terms, the Contractor seek clarification from the CO prior to proceeding.

4.4. CONTRACTOR CONTRACT MANAGEMENT.

4.4.1. Contract Manager (CM). The Contractor shall establish clear organizational lines of authority and responsibility to ensure effective management of the resources assigned to the requirement. At a minimum, the Contractor shall provide a CM who shall be responsible for managing the performance of work under this contract. The name of this individual and alternate(s) who shall act for the Contractor when the CM is absent shall be designated in writing to the CO. The CM or alternate(s) shall have full authority to act on behalf of the Contractor on all contractual matters relating to the daily operations of the work performed under this contract. The Contractor shall establish processes and assign appropriate resources to effectively administer the requirement. The Contractor shall respond to Government requests for contractual actions in a timely fashion. The CM or alternate(s) shall not perform any other services under this PWS without coordination through the CO or designated representative. The CM shall report any problems that are encountered in any work location.

4.4.2. Third Country Nationals (TCN). The Security Forces on each base control entry to the base. Under certain circumstances, the TCN might be denied entry. It is the Contractor's responsibility to coordinate with Security Forces at each base when there is a question about particular circumstance.

4.4.3. English Capability. The Contractor shall ensure that the CM and CM alternate(s) possesses good communication skills in English. The CM and CM alternate(s) must be able to communicate verbally and in writing in English.

4.4.4. Removal of Contractor Employees. The Contractor shall utilize only experienced, responsible and capable employees in the performance of this contract. The CO may require that the Contractor remove from the Government job any of his/her employees who endanger persons or property, or whose continued employment under this contract is inconsistent with the interests of military security.

4.4.5. Subcontract Management. The Contractor shall be responsible for any subcontract management necessary to integrate work performed on this requirement and shall be responsible for and accountable for subcontractor's performance on this requirement.

4.5. QUALITY ASSUARANCE. The Government will evaluate the Contractor's performance by appointing a Contracting Officer's Representative (COR) to monitor performance to ensure services are received. The COR will evaluate the Contractor's performance through receipt of complaints from the OOs. The Government will evaluate all of the Contractor's performance IAW the Quality Assurance Surveillance Plan (QASP).

4.6. GOVERNMENT REMEDIES. The CO will follow FAR 52.212-4, Contract Terms and Conditions-Commercial Items for the Contractor's failure to perform satisfactory services or failure to correct non-conforming services.

4.7. JAPANESE TAX EXEMPTION. The basis whereby US Armed Forces obtain exemption from Japanese taxes are prescribed in paragraph 3, Article XII of the Status of Forces Agreement under Article VI of the Treaty of Mutual Cooperation and Security between the U.S. and Japan.

- (a) The Contractor shall be responsible for submission of the following documents to the 374th Contracting Squadron for verification and issuance of fuel tax exemption certificates under this contract not later than 365 calendar days after receipt of an original BL. The Contractor shall also submit a certified statement to the Contracting Office for claiming deadhead distances for each ordered service during the performance period. The Contractor shall not include deadhead distance for trucks that are owned or used by a third party as this service is not considered for official use for fuel tax exemption purposes. The CO will review the accuracy of the Contractors' figures on fuel consumption prior to issuance of appropriate tax exemption certificate:

- (1) Fuel consumption ratios of truck by size.
- (2) Accurate lists of all trucks to be used under this contract with copies of vehicle inspection certificates, and other information if required.

4.8. SECURITY.

4.8.1. Installation Base Passes. For access to US Installations, the US Government will issue all required Gate Passes/Vehicle Passes to Contractor personnel at no cost to the Contractor. To obtain passes, the Contractor is required to submit documents IAW each installation instruction. The prime Contractor shall be responsible for all passes issued to his/her own or his/her subcontractor's employees under this contract. The Contractor shall return all applicable passes upon termination of employment or completion of this contract to the Installation Pass Office.

4.8.2. Gate Passes. In order to obtain Gate Passes, the Contractor may be required to (i) submit certificates of residence, abstracts of family registers and an ID photo, in addition to application forms which could vary depending on each installation, and (ii) make appointments at the Installation Pass Offices to take ID photos and pick up issued passes. The Contractor is responsible for the expenses and costs that they would incur in order to obtain Gate Passes.

4.8.3. Vehicle Passes. In order to obtain Vehicle Passes, the Contractor shall submit the proof of valid liability insurance that must cover the automobile liability insurance in the types and minimum amounts of (i) Bodily Injury - ¥30,000,000 per person per occurrence, in addition to the Japanese Compulsory Insurance (JCI) and (ii) Property Damage - ¥3,000,000 per occurrence.

4.9. LIABILITIES. The Contractor shall be responsible for loss, damage or injury to any person or property arising from the acts or omissions of the Contractor, its employees, or agents in performance of this contract. The Contractor shall indemnify and hold harmless the Government against claims arising from such acts or omissions. Except when loss and/or damage arises from causes beyond the control and without the fault or negligence of the Contractor, the Contractor shall be liable for any goods lost and/or damaged under this contract. The Contractor shall not be liable for loss or damage caused by the Government, including improper loading, handling, or

inherent defects in the goods.

4.9.1. Report of Damage, Destruction, Injury or Death. The Contractor shall report all incidents of damage or destruction to property, or personal injury or death to any person, arising out of and during the performance of this contract. For the purposes of this paragraph, the term “property” includes equipment, freight, or property of any type whether Government owned or not and the term “Contractor” includes the Contractor, its agents, or employees. The Contractor shall submit the reports to the CO and the COR as follows:

- (a) A preliminary report shall be made as soon as practicable after the time the incident occurs. The report may be either verbal or by electronic means.
- (b) A final report shall be submitted within 96 hours after occurrence of the incident.

4.10. U.S. LEGAL HOLIDAYS. The U.S. legal holidays applicable to this contract are as specified below:

1st January	New Year’s Day
3rd Monday of January	Martin Luther King Jr.’s Birthday
3rd Monday of February	Presidents’ Day
Last Monday of May	Memorial Day
18 th of June	Juneteenth National Independence Day
4th July	Independence Day
1st Monday of September	Labor Day
2nd Monday of October	Columbus Day
11th November	Veterans Day
4th Thursday of November	Thanksgiving Day
25th December	Christmas Day

5. SERVICE SUMMARY.

Performance Objective	Acceptable Quality Level	Method of Assessment
SS1: Completes actions within specified deadlines	Documented non-compliance instances shall not exceed 1 per month, per transportation office	Customer Complaint and periodic inspection of contract deliverables.
SS2: Compliant with applicable standards for sensitive, classified, dangerous, or hazardous freight requirements	Compliant with applicable standards for sensitive, classified, dangerous, or hazardous freight requirements.	Customer Complaint and periodic inspection of contract deliverables.
SS3: Ensures proper stowage of freight	Documented non-compliance instances shall not exceed 1 per month, per ordering office	Customer Complaint and periodic inspection of contract deliverables.

6. DELIVERABLES.

The Contractor shall provide deliverables as described in subsequent task orders. Deliverables shall be specified by the government. Format and delivery schedule for deliverables shall be outlined in CDRLs and/or other means.

	Name	Frequency	Quantity
1	Quarterly service report	quarterly	1
The Contractor shall submit a quarterly aggregate orders report of all completed orders. The report shall be formatted in a manner that allows sorting and analysis by type of transportation used, route, nature of freight, Ordering Officer, date of order receipt, contract number, and B/L number). The report shall be submitted no later than two (2) weeks following the end of each calendar year quarter. The report shall be prepared in the Government-prescribed format and shall include a negative report when no reportable			

activity has occurred during the reporting period.			
2	Preliminary Damage Report	As Needed	1
3	Final Damage Report	As Needed	1

7. **GOVERNMENT-FURNISHED SERVICES.** None.

8. **TECHNICAL EXHIBITS.**

- B. Distance Matrix for Okinawa

TECHNICAL EXHIBITS (TE)

TECHNICAL EXHIBIT A GENERAL TRUCKING SERVICES

1. SCOPE

This Technical Exhibit (TE) defines the specific requirements for the General Trucking Services family. Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS.

2. SERVICE REQUIREMENTS

2.1. General Trucking (Pricing Exhibit A). For services within the Mainland Block, the Government may request trucks in Medium/Large trucks, all of which shall be provided at the single, fixed rate specified in the Pricing Exhibit *Ax01 through Ax18, and Ax30. For services within the Okinawa Block, a different pricing principle applies. While services requiring a large truck shall also be provided at the single, fixed rate for ELIN Ax31, any service requiring a 4-6 Ton truck (Medium) shall be priced at the specific rate for ELIN Ax31. For both blocks, the rate is not subject to adjustment based on the vehicle size provided, and the Contractor is obligated to provide the specific vehicle class designated in the issued order. The Contractor shall not substitute a vehicle of a different class based on their own assessment of the cargo weight or volume, unless authorized in writing by the OO.

*Note: For ELINs shown in the format “Ax,” the letter “x” represents the applicable ordering period suffix (A through E).

Location	ELIN(s)	Size/Types	Load Capacity (kg)	
			Min	Max
All	Ax01-Ax30	*Medium/Large Truck (flatbed or van/wing-type)	3,000	13,000
Okinawa	Ax31	*Medium/Large Truck (flatbed or van/wing-type)	3,000	13,000
Okinawa	Ax31	4-6 Ton Truck (wide long type, flatbed or van/wing-type)	3,000	6,000

***with specific platform/bed dimensions and loading capacity**

	Loading Capacity	Minimum Platform Length	Minimum Platform width
Medium Truck	Over 3,000 kg up through 10,000 kg	6 meters	2.1 meters
Large Truck	Over 10,000 kg up through 13,000 kg	9 meters	2.3 meters

2.2. Specifications.

- (a) Flatbed or Van/Wing-Type Truck: Flatbed or van/wing-type truck shall be aluminum or stainless-steel enclosed cargo compartment/body, equipped with rear and/or side cargo door(s) with latches/hasps for securing doors with a padlock or similar locking device.
- (b) For ammunition and explosives (AA&E) shipment, the Contractor shall provide trucks with wood beds when directed by the TO. The Government will perform nail wood blocking and bracing to the wood truck floor IAW the applicable regulations at the loading points.

Note: The trucks having loading platforms/beds smaller than dimensions specified above can be dispatched only with permission from the OO at the time of placing an order for services with the Contractor.

2.3 Camp Kinser (Okinawa) Specifications. For the transportation service for Camp Kinser, Bldg. 401, the Contractor will be required to transport cargo to one and/or multiple locations within the timeframe identified in an order (TRUCK TRANSPORTATION ORDER FORM). The types and the number of vehicles required will be determined upon request by the Government. The Government reserves the right to assign a pallet rider for each Contractor's truck as necessary. The assigned pallet riders are responsible for contacting consignees and ensuring shipments being delivered in a timely manner.

3. ORDRING DEADLINE

3.1. Ordering Deadline for Transport within Honshu, Including Shikoku and Kyushu.

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
General/Dangerous Freight	By 14:00 on the business day preceding the day of service
Sensitive/Hazardous Freight	At least 4 business days

3.2. Ordering Deadline for Transport to/from Hokkaido

Type of Freight	Ordering Due Date/Time Prior to the Day of Service
General/Dangerous Freight	At least 4 business days (Section 3.1 above in this Section applies to transport within Hokkaido)
Sensitive/Hazardous Freight	At least 10 business days (Section 3.1 above in this Section applies to transport within Hokkaido)

3.3. Ordering Deadline for Transport within Okinawa

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
General Freight	By 14:00 on the business day preceding the day of service
Other than General Freight	At least 4 business days

TECHNICAL EXHIBIT B REEFER TRUCKING SERVICES

1. SCOPE

This Technical Exhibit (TE) defines the specific requirements for the Reefer Trucking Services family. Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS.

2. SERVICE REQUIREMENTS

2.1. Service Categories and Performance Requirements (Pricing Exhibit B). The Government requires temperature-controlled transportation services defined herein. The Contractor's proposed solution, whether utilizing integrated reefer trucks or tractor-trailer combinations, must meet the performance, equipment, and safety standards specified.

2.2. Mainland Block Services (*ELINs Bx01-Bx16). For services within the Mainland Block, the Government may request reefer trucks. The Contractor shall provide transportation with the load capacities specified below, at the rates defined in the Pricing Exhibit for ELINs Bx01-Bx16.

Location	ELIN(s)	Size/Types	Load Capacity (kg)	
			Min	Max
All	Bx01 -Bx16	*Medium/Large Reefer Truck	3,000	13,000

***With specific platform/bed dimensions and loading capacity**

	Loading Capacity	Minimum Platform Length	Minimum Platform width
Medium Truck	Over 3,000 kg up through 10,000 kg	6 meters	2.1 meters
Large Truck	Over 10,000 kg up through 13,000 kg	9 meters	2.3 meters

*Note: For ELINs shown in the format “Bx,” the letter “x” represents the applicable ordering period suffix (A through E).

2.3. Okinawa Block Services (ELINs Bx17). For services within the Okinawa Block, the Contractor shall provide transportation solutions that meet the following requirements. This may be accomplished via integrated medium/large reefer trucks or via a tractor-trailer and container van combination.

- (a) Core Transportation Service (ELIN Bx17 - Distance-Based): This is the primary service for moving temperature-controlled cargo from a point of origin to a destination. The minimum required capacity shall be the ability to transport at least 14 standard pallets under required temperature control conditions. Pallet sizes are 40 inches (101.60 cm) wide by 48 inches (121.92 cm) long, by 75 inches (190.50 cm) high.

* Pricing: This service shall be priced using a distance-based rate table as specified in Pricing Exhibit Bx17. This rate shall cover the cost of transportation only and shall not include the optional services defined in section 2.3(b).

- (b) Optional "Drop & Hook" Service (ELIN Bx49 - Per Half Day): This optional service is designed to enhance operational efficiency at Government facilities (e.g., DeCA) and is applicable to Contractors utilizing a tractor-trailer and container van system. Any intra-facility movements, repositioning, or shunting of containers beyond the defined “drop and hook” operation shall be considered a separate service and shall only be performed when specifically ordered by the Government.

* Description of Service: At the Government’s request, the Contractor shall perform a "drop and hook"

operation. This consists of:

(1) Dropping a pre-loaded (or empty) container at a designated location (e.g., a loading dock) for the Government to access.

(2) Hooking to a different, previously dropped container (now loaded or empty) and transporting it away.

* Purpose: This allows the Government to load/unload a container without detaining the tractor and driver, while the Contractor simultaneously transports other cargo.

* Pricing: This service shall be charged as a fixed fee per half day as specified in Pricing Exhibit B049. A "half day" is defined as a period of up to four (4) consecutive hours. This fee is billable for each half-day period, or any portion thereof, and only when the Government explicitly requests this specific service. Contractors proposing to use only integrated reefer trucks are not required to bid on this ELIN.

(c) Powered Storage: The Government may provide powered parking slots for temporary staging of refrigerated containers in Camp Kinser. This shall not be a direct cost to the Contractor. The Contractor is responsible for coordinating the use of these slots with the designated Government representative.

2.4. Specifications.

(a) Reefer Truck. A reefer truck shall be equipped with a refrigeration unit capable of maintaining the designated temperature plus or minus 2.5°C (or 4.5°F), which shall be monitored by a temperature recording device throughout transportation services. The temperature control is described below.

(1) For chilled Items – Maintain the cargo unit temperature between 1°C and 3°C (33.8°F and 37.4°F)

(2) For frozen items – Maintain the cargo unit temperature at minus 18°C (-0.4°F) or less.

(b) Perishable Van (Chilled and Frozen). A refrigerated container van shall be equipped with a refrigeration unit capable of maintaining the designated container temperature of not exceeding 1.6°C (35°F) for items transported. 40ft van shall hold at least 18 or more pallets. 20ft van must hold at least 10 pallets (maximum). Pallet sizes are 40 inches (101.60 cm) wide by 48 inches (121.92 cm) long, by 75 inches (190.50 cm) high. The Container van shall have lock capabilities (padlocks) to ensure security.

(c) In case a mixed loading shipment is ordered, the Contractor shall confirm that an endorsed shipping document (e.g., DD Form 1384, Transportation Control and Movement Document/Supporting Document) specifies the cargo unit temperature to maintain. Failure to do so may cause a deficiency in maintaining required temperature.

(d) The proper pre-cooling shall be required before loading items. The Contractor shall furnish temperature recording charts at no extra charge upon request by the OO.

2.3. Cargo Compartment. The Contractor shall maintain door and sill gasket in good condition. The Contractor shall maintain the interior of the cargo compartment (ceiling, decking, and walls including slide-partition) in good condition, kept clean, sanitary and free of rust and odors. Refrigeration of the cargo compartment shall be accomplished by mechanical refrigeration unit. Any equipment or materials used therein shall be clean and free from grease, oil and dirt.

2.4. Okinawa Specifications. The Contractor shall assign one dispatcher and several drivers in support of Defense Commissary Agency (DeCA) operations. The dispatcher shall be the point of contact for the assigned driver(s) and responsible for coordinating with DeCA personnel and providing information for drivers to follow along with their routes and coordinating delivery times and locations within DeCA facilities (Camp Kinser Building

202, 208, and 303). The assigned drivers shall transport goods from one location to another within DeCA facilities. The Contractor shall provide the dispatcher's point of contact information to the Government upon receipt of a truck order.

3. ORDERING DEADLINE

3.1. Ordering Deadline for Transport within Honshu, Including Shikoku and Kyushu.

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
Reefer / Chilled and Frozen	By 14:00 on the business day preceding the day of service

3.2. Ordering Deadline for Transport to/from Hokkaido

Type of Freight	Ordering Due Date/Time Prior to the Day of Service
Reefer / Chilled and Frozen	At least 4 business days (Section 3.1 above in this Section applies to transport within Hokkaido)

3.3. Ordering Deadline for Transport within Okinawa

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
Reefer / Chilled and Frozen	At least 5 business days

TECHNICAL EXHIBIT C OVERSIZED/OVERWEIGHT TRUCKING SERVICES

1. SCOPE

This Technical Exhibit (TE) defines the specific requirements for the Oversized/Overweight (OSOW) Trucking Services family. Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS.

2. SERVICE REQUIREMENTS

2.1. Oversized/Overweight Trailers (Pricing Exhibit C). The Contractor shall coordinate with the OO to validate the appropriateness of the selected trailer prior to furnishing an order. More than one item may be transported with a trailer when the OO requests and the Contractor is capable to furnish a suitable trailer for such a shipment. Low-bed Semitrailers utilized by the Contractor will typically have the loading capacity described below.

Location	ELIN(s)	Size/Types	Load Capacity (kg)		Loading capability for volume of the following cargo dimensions		
			Min	Max	L(“/mm)	W(“/mm)	H(“/mm)
All	*Cx01-Cx06	20-Ton Capacity	16,000	20,000	355/9,017	106/2,692	107/2,718
All	Cx01-Cx06	26-Ton Capacity	20,000	26,000	412/10,465	116/2,947	118/2,998
All	Cx01-Cx06	30-Ton Capacity	26,000	30,000	469/11,913	126/3,200	129/3,277
Mainland	Cx01-Cx05	36-Ton Capacity	30,000	36,000	525/13,335	134/3,404	139/3,531
All	Cx01-Cx06	Self-loader	4,000	13,000	-	-	-
Okinawa	Cx06	Wrecker Truck (S)	1,500	4,999	-	-	-
Okinawa	Cx06	Wrecker Truck (L)	5,000	30,000	-	-	-

*Note: For ELINs shown in the format “Cx,” the letter “x” represents the applicable ordering period suffix (A through E).

2.1.1. Multi-Loading. When more than one (1) item is transported on a single trailer, the Contractor shall either provide a trailer of sufficient size and capacity to accommodate the load or arrange suitable equipment to perform multi-loading operations. In such cases, the total charge shall be calculated as 1.5 times the rate for the applicable unit price, unless otherwise justified based on regulatory or operational requirements. The unit price shall be based on the tonnage ordered, not the actual size of the dispatched trailer. In cases where cargo of different order sizes is loaded onto a single trailer, the highest applicable unit price multiplied by 1.5 shall apply. Any such arrangement shall be subject to prior OO’s approval.

2.2. Okinawa Specifications for Wrecker Trucks.

- (a) Small Wrecker truck shall be capable of towing up to 4,999 kilograms (11,021 lbs.). In the event a Government vehicle cannot be hauled by lowbed trailer or semi-trailer without exceeding a road height limitation, the Contractor shall provide wrecker service to perform the same service.
- (b) Large Wrecker trucks shall be capable of towing up to 30,000 kilograms (66,139 lbs.). In the event a Government vehicle cannot be hauled by Lowbed trailer or Semi-trailer without exceeding a road height limitation, the Contractor shall provide wrecker service to perform the same service.

3. ORDRING DEADLINE

3.1. Ordering Deadline for Transport within Honshu, Including Shikoku and Kyushu.

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
OSOW semitrailer	At least 2 business days

3.2. Ordering Deadline for Transport to/from Hokkaido

Type of Freight	Ordering Due Date/Time Prior to the Day of Service
OSOW semitrailer	At least 4 business days (Section 3.1 above in this Section applies to transport within Hokkaido)

3.3. Ordering Deadline for Transport within Okinawa

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
OSOW semitrailer	At least 4 business days
Small Wrecker	By 14:00 on the business day preceding the day of service
Large Wrecker	At least 10 business days

TECHNICAL EXHIBIT D ISO CONTAINER TRUCKING SERVICES

1. SCOPE

This Technical Exhibit (TE) defines the specific requirements for the ISO Container Trucking Services family. Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS.

2. SERVICE REQUIREMENTS

2.1. ISO Container Trucking (Pricing Exhibit D). The Contractor shall furnish types of truck tractor with 20ft/40ft ISO container chassis having the loading capacity described below:

Location	ELIN(s)	Size/Types	Load Capacity (kg)	
			Min	Max
All	*Dx01 -Dx05	Truck Tractor with 20ft ISO Chassis	10,000	20,000
All	Dx01 -Dx05	Truck Tractor with 40ft ISO Chassis	10,000	30,000

*Note: For ELINs shown in the format “Dx,” the letter “x” represents the applicable ordering period suffix (A through E).

2.1.1. Transportation of Two (2) 20ft ISO Containers on a Single Chassis. The Contractor may be requested to transport two (2) 20ft ISO containers on a single, specialized chassis capable of such a configuration. In this event, the following conditions shall apply:

- (a) Transportation Charges: The freight charge for this service will be calculated as 1.5 times the rate for a single 20ft ISO container for the specified journey.
- (b) Accessorial Services: As this configuration utilizes a single truck-tractor, any applicable accessorial service charges as specified in the Pricing Exhibit shall be billed only once for the single vehicle. Such charges shall not be duplicated. Any other configuration involving more than one (1) container on a single chassis shall be subject to prior OO’s approval.
- (c) Ferry charges: When two (2) 20ft ISO containers are transported on a single chassis, applicable ferry charges shall be assessed based on a 40ft container configuration, not as two (2) separate 20ft containers.

2.2. Types of Freight. Consists of all types described under paragraph 2.1. Any empty containers shall be transported as general freight. For transporting ammunition and explosives (AA&E), the safety requirements are specified in paragraph 2.3. also apply.

2.3. Types of Containers.

- (a) ISO Containers: An enclosed, permanent, reusable, non-disposable, weather-tight shipping conveyance, measuring (width x height x length in feet) 8x (8 to 9½) x 20 and 8 x (8 to 9½) x 40, fitted with at least one door, which can be handled in transit as a unit, or can be mounted and secured on marine, rail or highway transport.
- (b) Flatrack (platform) Containers: A non-weatherproof platform having neither sides nor a top but having collapsible ends. The flatrack can be end loaded or top or side loaded. Flatrack containers are convertible to a “knock-down” condition (i.e., the ends are collapsed so that the container is flattened in appearance) for delivery purposes. Up to a total of three such flattened or knock-down containers may be stacked

together for transportation purposes.

- (c) Government Containers and MILVANs conforming to United States and ISO standards, measuring (width x height x length in feet) 8 x (8 to 8½) x 20.

2.4. Round Trip Requirements. When a service is designated as a round trip, the Contractor shall transport a filled or empty container from the origin to the destination and subsequently return the container to the origin point or another location as designated by the OO. The Contractor's responsibility, and the Government's corresponding liability for costs, shall cover the entire round-trip service. This service is considered complete, and the Government's liability concludes, only when the Government-owned container is safely returned to the final designated point and offloaded from the Contractor's chassis. Distance-based charges for such services will be calculated based on the total distance of the entire round-trip journey.

2.5. Extended Staging of Contractor-Owned Container Chassis. The OO may request 20ft or 40ft container chassis be delivered by the Contractor for the Government to place a government-owned/controlled ISO container/MILVAN at the designated Government installation up to thirty-five (35) calendar days. This service shall be billed at the "Chassis Staging, Per Day" rate as specified in the Pricing Exhibit for each day the chassis is required to remain on-site for this purpose. The rate is a fixed fee per chassis, per calendar day. The charge applies for each calendar day, or any portion thereof, that the chassis remains staged at the Government's disposal for this purpose. The total charge will be the daily rate multiplied by the total number of calendar days the chassis was staged.

3. ORDERING DEADLINE

3.1. Ordering Deadline for Transport within Honshu, Including Shikoku and Kyushu.

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
ISO - General/Dangerous Freight	At least 2 business days
ISO - Sensitive/Hazardous Freight	At least 4 business days

3.2. Ordering Deadline for Transport to/from Hokkaido

Type of Freight	Ordering Due Date/Time Prior to the Day of Service
ISO - General/Dangerous Freight	At least 5 business days (Section 3.1 above in this Section applies to transport within Hokkaido)
ISO - Sensitive/Hazardous Freight	At least 10 business days (Section 3.1 above in this Section applies to transport within Hokkaido)

3.3. Ordering Deadline for Transport within Okinawa

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
ISO - General Freight	By 14:00 on the business day preceding the day of service
ISO - Other than General Freight	At least 10 business days

TECHNICAL EXHIBIT E: AIR-SUSPENSION TRUCKING SERVICES

1. SCOPE

This Technical Exhibit (TE) defines the specific requirements for the Air-Suspension Trucking Services family. Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS.

2. SERVICE REQUIREMENTS

2.1. Air-Suspension Trucking (Pricing Exhibit E). Air suspension trucks utilized by the Contractor will transport aircraft engines on an engine trailer.

2.2. Types of Freight. The Contractor will transport any of the engines on an engine trailer with the estimated dimensions indicated below:

Length:	212 inches (538.48 cm)	189 inches (480.06 cm)
Width:	58 inches (147.32 cm)	58 inches (147.32 cm)
Height:	87 inches (220.98 cm)	96 inches (243.84 cm)
Weight:	5,640 lbs. (2,558.26 kg)	5,460 lbs. (2,476.61 kg)
Estimated Value:	\$3.8M / each	\$3.8M / each

2.3. Specifications.

- (a) The vehicles shall be equipped with pneumatic suspension (air-rides) on both front and rear. One-side air-ride vehicles are not acceptable. The vehicles may be trucks as long as the engine indicated below can be properly transported satisfying the requirements cited herein. Only vehicles with wooden beds are acceptable.
- (b) A flatbed or van-type truck having a load capacity to transport either of the engines indicated above shall be used. The vehicle shall have either a fold down tail gate door or rear doors that allow the trailered jet engines to be efficiently rolled on and rolled off to or from the rear of the truck bed or enclosed cargo van area. The vehicle shall be of sufficient width, height, and length for proper bracing and tying down of the engine as required IAW the most recent version of Technical Order (TO) 00-85-20, Technical Manual Engine Shipping Instructions as described in the next paragraph.

2.4. Bracing & Tying Down. Bracing & Tying Down procedures will be performed by the Government IAW TO 00-85-20. The Contractor shall cooperate with the Government personnel during this process to ensure that the engine is securely fastened and safe for transit. The Contractor remains responsible for the proper stowage and security of freight and for any loss or damage during transit resulting from a failure of its equipment or its supporting duties. The Government will provide at least four sets of chains (5,400 WLL LB) and binders required for proper bracing and tying down. The Government will attach tie-down chains to all four 3C3461G02 adapter tie-down rings and truck beds as shown in the image below.

- (a) After the Government loads the jet engine onto the truck bed, the Contractor shall ensure that the jet engine trailer brakes are applied and that the jet engine rail clamps on roller adapters (if equipped) are tight. The Contractor shall ensure that trucks are equipped with floor-mounted bull rings and proper tie down equipment. For example, "Butterfly Door equipped enclosed trucks.
- (b) Trucks shall NOT be used without proper tie down equipment. The Government will provide the chocks for the wheels at the loading point.

- (c) For an engine trailer, wheel chocks of wood (4 x 4 inches or 4 x 6 inches) shall be placed fore and aft of each wheel and shall be toenailed to the truck floor using 20 dd nails. NOMINAL 2 x 4 inches or wider blocks, approximately 18 inches or longer shall be nailed with 10 dd nails to the truck floor one inch from the outside of each tire, and then nail second block on top of these blocks. See Attachment 1. The Contractor shall be responsible for the proper stowage and security of freight and shall be responsible for any loss or damage while in transit. Tighten tie-down chains incrementally with roughly equal tensions so that the transportation trailer cannot move. Cover F110/3000E with proper size of tarp and secure to truck bed using tie-down straps.
- (d) In the event an air ride flat-bed type truck is used, the Contractor shall furnish proper protection for the engines. The Contractor shall ensure that Jet Engines shipped on open type carrier equipment shall be covered with tarpaulins in order to protect the engines from the weather elements. The tarpaulins/tarps will be installed and fastened in a manner which will prevent vibrations and flapping during movement.
- (e) 3000E Surface Transportation, F110- Surface transportation of engines, an air ride tractor, and trailer will be used.
- (f) The Government will furnish the items at each pickup. The Contractor is held liable for loss, damage, destruction, or theft of the Government-furnished property. All properties must be returned in serviceable condition upon each delivery.

EXAMPLE OF PNEUMATIC SUSPENSION (AIR RIDE) TRUCK

LOCATION AND SPACING OF TRUCK BED TIEDOWN PROVISIONS VARY. ENGINE SHOULD BE POSITIONED ON TRUCK BED SUCH THAT TIEDOWN GEOMETRY IS SYMMETRICAL AND APPROXIMATELY AS SHOWN.

c6-fig16a

3. ORDERING DEADLINE

3.1. Ordering Deadline for Transport within Honshu, Including Shikoku and Kyushu.

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
Air-Suspension Trucking	At least 2 Business days

3.2. Ordering Deadline for Transport to/from Hokkaido

Type of Freight	Ordering Notification Due Date
Air-Suspension Trucking	At least 5 Business days

TECHNICAL EXHIBIT F MATERIAL HANDLING EQUIPMENT (MHE)

1. SCOPE

This Technical Exhibit (TE) defines the specific requirements for the Material Handling Equipment Services (MHE) family. Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS. The fundamental requirement of this exhibit is that all MHE services must be performed for the direct purpose of loading freight onto, or off-loading freight from, a transport vehicle. This applies regardless of the operational location, which may include, but is not limited to, Government facilities, commercial ports, or field exercise sites. The provision of MHE for any task not directly involving the loading/off-loading of a transport vehicle (such as general material movement within a site, repositioning of assets, or construction support) is strictly outside the scope of this contract and is not authorized.

2. SERVICE REQUIREMENTS

2.1. General. The Contractor shall provide forklifts or truck-mounted/mobile cranes, along with appropriate set of gear, certified operators and necessary support crews (e.g., slinging teams), to facilitate the loading and/or off-loading of freight from transport vehicles.

2.2. MHE Categories (Pricing Exhibit F). The Contractor shall furnish MHE according to the following size classifications:

Location	Size/Types	Load Capacity
All	Small-Size Forklift	7-ton or less
All	Middle-Size Forklift	From 8-ton to 10-ton
All	Large-Size Forklift	From 10-ton to 16-ton
All	Small-Size Crane	Up to 25-ton
All	Large-Size Crane	From 26-ton to 50-ton

2.3. Ordering Methods. MHE services shall be ordered via one of the two methods defined below.

2.3.1. Accessorial MHE Service.

- (a) Definition: The MHE shall not be ordered independently and must be directly tied to a transportation service performed by the Contractor under this contract within the same order. This ordering method is used when MHE is required to support a transportation service being executed under this same contract (i.e., to support the Contractor's own truck).
- (b) Pricing: The service will be priced on a fixed-fee, half-day basis using the "Accessorial" rates as specified in Pricing Exhibit F. Half Day covers a period of up to four (4) consecutive hours from the scheduled start time or arrival on site, whichever is later. The fixed fee is inclusive of all waiting times that occur within the ordered service period (Half Day).

2.3.2. Stand-Alone MHE Service.

- (a) Definition: This service is ordered independently of any transportation services performed by the Contractor under this contract. This ordering method is used when MHE is provided by the Contractor to support loading/off-loading for a transport conveyance operated by another Government Contractor or for a government asset that lacks its own MHE capability. When MHE supports both the Contractor's transportation under this contract and other transportation or Government assets outside this contract, the service shall be ordered as Stand-Alone.

- (b) Pricing: The service will be priced on a fixed-fee, half-day basis using the "Stand-Alone" rates as specified in Pricing Exhibit F. Half Day covers a period of up to four (4) consecutive hours from the scheduled start time or arrival on site, whichever is later. The fixed fee is inclusive of all waiting times that occur within the ordered service period (Half Day).

2.4. On-Site Foreman (Okinawa Only). For all MHE orders placed for services in Okinawa, regardless of the ordering method, the Contractor shall provide an experienced, qualified On-Site Foreman to oversee and manage all on-site MHE operations exclusively in Okinawa. This position will not be required for the Mainland operations. The cost for this foreman shall be priced separately as specified in Pricing Exhibit F

2.5. Geographic Pricing Uplift (Hokkaido & Okinawa). The Government acknowledges that MHE services in Hokkaido and Okinawa incur significant additional costs. Therefore, a single, blended percentage-based pricing uplift shall be applied to all MHE services (both Forklift and Mobile Crane) performed in each of these two regions. The specific uplift percentages for Hokkaido and Okinawa are defined in Pricing Exhibit F. This single uplift shall be applied to the base cost of the applicable MHE service.

3. ORDERING DEADLINE

3.1. Ordering Deadline for Transport within Honshu, Including Shikoku and Kyushu.

Type of Family/Order Type	Ordering Due Date/Time Prior to the Day of Service
MHE / Accessorial Order	Follow the Ordering Due Date/Time of the applicable transportation family/freight.
MHE / Standalone Order	By 14:00 on the business day preceding the day of service.

3.2. Ordering Deadline for Transport to/from Hokkaido

Type of Family/Order Type	Ordering Notification Due Date
MHE / Accessorial Order	Follow the Ordering Due Date/Time of the applicable transportation family/freight.
MHE / Standalone Order	At least 4 working days (Section 3.1 above in this Section applies to transport within Hokkaido)

3.3. Ordering Deadline for Transport within Okinawa

Type of Family/Order Type	Ordering Due Date/Time Prior to the Day of Service
MHE / Accessorial Order	Follow the Ordering Due Date/Time of the applicable transportation family/freight.
MHE / Standalone Order	At least 4 working days

TECHNICAL EXHIBIT G MULTIMODAL TRANSPORTATION - FERRY

1. SCOPE

1.1. This Technical Exhibit (TE) defines the specific requirements for the Multimodal Transportation - Ferry. Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS.

1.2. Applicability. This exhibit applies to the transportation of freight requiring ferry transport to complete the linehaul portion of a movement. The pricing structure separates the land-based transportation (drayage) from the water-based transportation (ferry).

2. SERVICE REQUIREMENTS

2.1. Ferry (Pricing Exhibit G). There may be instances where transport occurs from points that are geographically separated by bodies of water. In these cases, the Contractor shall utilize applicable commercial ferry systems to complete transport.

2.2. Service Coverage. The service is structured by geographical zones. Contractors shall be capable of providing service via any and all commercial ferry routes originating from or destined for the Government designated locations within their awarded zones.

2.3. Service Offering and Participation Requirements.

2.3.1. Mainland Routes (*ELIN Gx01-Gx04). Contractors participating in the General Truck, Reefer, OSOW, and ISO transportation families for Mainland Japan are required to submit bids for the corresponding ferry items (Gx01-Gx04).

*Note: For ELINs shown in the format “Gx,” the letter “x” represents the applicable ordering period suffix (A through E).

2.3.2. Okinawa Routes (ELIN Gx05). Only Contractors participating in the General Truck family for Okinawa are eligible and required to bid on the applicable Okinawa ferry items. This item applies only when the Contractor is responsible for arranging and procuring ferry transportation. When ferry transportation is provided by the Government, this item shall not apply.

2.3.3. Unlisted Routes. Should a requirement arise for a ferry route not listed in the pricing schedule, the Contractor may utilize such a route only after obtaining prior approval from the OO. The cost for the ferry portion of this transport shall be claimed as a reimbursable expense. The Contractor must provide a legible, unaltered scan of the original receipt to the OO to substantiate the claim.

2.3.4. Rate Structure. The unit prices provided for ferry items shall represent the ferry transport portion only for a one-way transit. The land-based portion of the transport will be charged separately as specified in Section 2.3.5.

2.3.5. Drayage. Drayage from the point of origin to the port of embarkation, and from the port of debarkation to the final destination, shall be billed IAW the applicable distance-based rate tables found in the respective transportation family (e.g., General Truck, Reefer, OSOW, and ISO).

2.3.6. Price Stability. Unit prices for ferry transport are fixed. No price revisions will be made based on ferry operator fuel surcharge adjustments or other operational cost fluctuations.

2.3.7. Accessorial Services.

2.3.7.1. Standard Accessorial. All standard accessorial services shall be applied IAW the rules and rates of the applicable primary trucking transportation family.

2.3.7.2. Specialized Accessorial (Dangerous/Hazardous/Sensitive). For shipments involving Dangerous, Sensitive, or Hazardous materials, any accessorial charges specific to the ferry transport portion (i.e., charges levied by the ferry operator) shall be billed IAW the specialized accessorial rates. Only Contractors participating in the General Truck and ISO families are eligible to bid on these specialized accessorial.

3. ORDERING DEADLINE

3.1. Ordering Deadline for Transport within Honshu, Including Shikoku and Kyushu.

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
Multimodal (Ferry) - All Freight	Follow the Ordering Due Date/Time of the applicable transportation family/freight.

3.2. Ordering Deadline for Transport to/from Hokkaido

Type of Freight	Ordering Due Date/Time Prior to the Day of Service
Multimodal (Ferry) - All Freight	Follow the Ordering Due Date/Time of the applicable transportation family/freight.

3.3. Ordering Deadline for Transport within Okinawa

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
Multimodal (Ferry) - All Freight	Follow the Ordering Due Date/Time of the applicable transportation family/freight.

TECHNICAL EXHIBIT H MULTIMODAL TRANSPORTATION - RAIL

1. SCOPE

1.1. This Technical Exhibit (TE) defines the specific requirements for the Multimodal Transportation - Rail Services family, applicable for all transportation within Mainland Japan (Hokkaido, Honshu, Shikoku, and Kyushu). Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS.

1.2. Applicability. This service utilizes the Japan Freight Rail Company (JFRC) network as the primary mode of line-haul transportation. The service structure is designed to combine the "on-rail" portion (rail transport) with the "off-rail" portion (drayage services) to provide a comprehensive door-to-door solution.

2. SERVICE REQUIREMENTS

2.1. Service Overview (Pricing Exhibit H). The Contractor shall provide all necessary labor, equipment, and supervision to manage and execute rail transportation services. This includes coordinating the pickup of freight, drayage to the origin JFRC station, the on-rail transport, and the final drayage from the destination JFRC station to the final point of delivery.

2.2. Container Types. All services under this TE shall be priced and provided for two standard container sizes:

- 12-foot JRF Containers
- 20-foot ISO Containers

2.3. Pricing Models. This service family utilizes two distinct pricing models. Contractors must bid on both models.

2.3.1. P2P Routes: For specific, high-volume routes listed in Pricing Exhibit H. These are all-inclusive, fixed unit prices covering the total door-to-door transportation.

2.3.2. Distance-Based Routes: For all other routes not listed as P2P. The total price is calculated by combining the On-Rail and Off-Rail charges as defined in Section 2.4. & 2.5.

2.4. On-Rail Charges (Distance-Based Model).

2.4.1. Rate Table. The primary charge for rail transport shall be determined by a distance-based rate table. This table will cover distances up to 2,700 km in 25 km increments.

2.4.2. Inclusions. The On-Rail unit price is inclusive of:

- (a) The rail line-haul freight charge from the origin JFRC station to the destination JFRC station.
- (b) A standard drayage allowance of up to 30 km at both the origin (pickup) and the destination (delivery).

2.5. Off-Rail Charges (Excess Drayage).

2.5.1. Applicability. When the required drayage distance at either the origin or destination exceeds the included 30 km allowance, the excess distance shall be billed separately.

2.5.2. Rate Table. This excess drayage shall be priced according to a separate Drayage Distance Rate Table, which provide rates for distances from 40 km up to 100 km, in 10 km increments. Excess drayage charge shall be applied separately for origin-side and destination-side drayage based on the applicable mileage band in the Excess Drayage Rate Table.

2.5.3. Calculation Example: If the origin drayage is 45 km, the Contractor will bill for the applicable On-Rail charge (which includes the first 30 km) PLUS the Off-Rail charge for the 50 km bracket (as 45 km falls into this bracket).

3. ORDERING DEADLINE

3.1. Ordering Deadline

Type of Family/Freight	Ordering Due Date/Time Prior to the Day of Service
Multimodal (Rail) - General/Dangerous Freight	At least 3 business days
Multimodal (Rail) - Sensitive/Hazardous Freight	At least 5 business days

TECHNICAL EXHIBIT J MULTIMODAL TRANSPORTATION - AIR

1. SCOPE

This Technical Exhibit (TE) defines the specific requirements for the Multimodal Transportation - Air Services family. Due to the unpredictable nature of air transport requirements, this service is not priced via standard rate tables. Instead, it relies on a pre-qualified pool of Contractors who will compete for individual orders. Contractors awarded under this category shall comply with all requirements detailed herein, in addition to all requirements specified in the Core PWS.

2. SERVICE REQUIREMENTS

2.1. Participation and Pre-Qualified Pool. Participation in this service family is based on a Contractor's declared capability. Contractors who possess the capability to provide door-to-door air transportation services shall indicate their participation by marking "Yes" in the designated area of Pricing Exhibit J. A Contractor who indicates "Yes" and is subsequently deemed technically acceptable by the Government will be included in a pool of pre-qualified vendors. This pool of vendors will be eligible to receive FOPRs for future air transport requirements. An indication of "No" will exclude the Contractor from this process.

2.2. Ordering Process and Service Execution. When a requirement for air transport is identified, the Government will issue an FOPR to all Contractors within the pre-qualified pool. The FOPR will detail the specific shipment requirements, including but not limited to, origin, destination, freight characteristics, and required timelines. The requested service shall always consist of a complete door-to-door solution, encompassing:

- (a) Drayage from the point of origin to the designated origin airport/handling station.
- (b) The air line-haul transport.
- (c) Final drayage from the destination airport/handling station to the point of delivery.

Upon receipt of the FOPR, Contractors shall submit a firm-fixed-price proposal for the total cost of the specified door-to-door movement. The Government will then place a firm-fixed-price order with the Contractor whose proposal is determined to provide the best value.
