

1. Illumination Criteria

Could you please confirm the required illumination parameters for the stated 9,200 m² coverage (e.g. minimum lux level and measurement methodology)?

- Illumination parameters / requirement determined from spec sheets for similar commercially available units used on previous projects.

2. Evaluation of Enhanced Solutions

As the solicitation indicates award based on “most advantageous to the government,” could you confirm whether solutions exceeding minimum requirements (e.g. higher lumen output, increased coverage, or higher alternator capacity) will be evaluated favorably?

- “Most advantageous to the government” with technical evaluation and approval by end user.

3. Trailer Configuration

Please confirm whether a road-legal trailer with a homologated towing configuration is acceptable if it ensures compact transport dimensions, even if the drawbar is not explicitly foldable but functionally equivalent.

- Trailers should include all lighting & items to be made road-legal. Folding hitches allow are preferred, as it allows the end user to ship multiple units with the lowest space impact.
