C.1. GENERAL

C.1.1. Introduction. The Department of the Army (DA) G 3/5/7 has designated the Mission Training Complex (MTC) as the vehicle for providing collective training and sustainment on Army Command and Control Information Systems (C2IS)the Command-and-Control Warfighting Function (WfF), and the Army's approach to Mission Command (MC) using a variety of tools and Army fielded systems. This doctrine outlining the MTC mission is found in the Army's Training Circular (TC) 6 series. MTC's supports small unit (Squad through Company), Medium units (Battalion through Brigade), and large units (Echelons above BDE) in training environments replicating Multidomain Operations. The Army fields digital C2IS to units from platoon through theater level. MTC's focus on realistic and demanding training. MC focuses our support on a unit's organizational leadership and supporting staff. MC doctrine requires Commanders and their staffs to issue intent-based orders, which empowers units at every echelon with the freedom to improve and adapt in a complex Operating Environment (OE). Organizational leaders and their staffs must conduct realistic and relevant training, which builds trust within formations that translates to mission accomplishment on the battlefield. Live, Virtual, Constructive, and Gaming (LVC-G) models and simulations are required to create realistic and challenging training events that closely replicate conditions a unit would face on the battlefield.

C.1.2. Objectives. The Contractors shall support individual through collective MC training, WfF training, the Military Decision-Making Process (MDMP), Games for Training (GFT), the Joint Operational Planning Process (JOPP), NATO Operational-Level Planning Process, mission rehearsal, and constructive simulations exercises. Constructive simulation training exercises include planning, preparation, set-up, execution, and recovery. These training events and exercises may occur concurrently or separately. The Contractor shall assist the Government in providing constructive simulation, GFT resources, and adaptive and responsive training for the individual through echelons above Brigade (EAB). The Contractor shall be capable of combining events into a simultaneous synthetic environment using the simulations and C2IS fielded to MTC. These services support U.S. Army Title 10 training, deployment training events, and Mission Rehearsal Exercises (MRE). These services also support Joint, Combined, NATO, and service component commander, staff and leader constructive simulation training and assistance in executing the

Combatant Commanders' engagement strategy.

C.1.3. Scope. MTCCS-III is an Indefinite Delivery Indefinite Quantity (ID/IQ), Multiple Award Task Order Contract (MATOC). The contract is structured for maximum flexibility in providing for an expedited ordering process to satisfy the needs of customers primarily at the Army Commands, Army Service Component Commands (ASCC), Army Corps, and Direct Reporting Units (DRU). This contract may be utilized at any MTC or Regional Simulation Center (RSC) location worldwide. Specific regulations, directives, standard operating procedures (SOPs), locations, etc. will be identified at the Task Order (TO) level. MTCCS-III contractor(s) will provide support in the following three primary task areas and five Supporting task Areas:

Primary Task Areas

Task 1: Training and Exercise Support

Task 2: Simulation Support

Task 3: Cybersecurity and Risk Management Framework (RMF)

Supporting Task Areas

Task 4: Plans and Operations

Task 5: Technical Service and Support

Task 6: Information management

Task 7: Training environment integration

Task 8: Logistics

Supporting task areas are considered integral to supporting the Primary task areas and SHALL NOT be ordered on a stand-alone basis for any task order.

C.1.3.1. Performance Work Statement (PWS). This MATOC PWS conveys the basic scope and performance requirements, however not every task included here will be used in each Task Order (TO); to this effect all tasks in this PWS shall be read to include, "as directed in the TO". Individual TO PWS will provide the specific tasks and subtasks required by their requiring organization. Specific standards, metrics and assessment measures will be identified in the issued TOs. The general basis for performance standards provided in this PWS will reflect one or more of the following measures for the work to be done:

- Quantity (how much or how often must the service be performed)
- Quality (the required acceptable level of service)
- Timeliness (the timeframe/period for submission/performance).

C.1.3.2. Performance Standards. The performance standards in this MATOC PWS provide the general basis for measuring the performance of each requirement associated with the standard. Where metrics are cited for any general standard, they are used for the purpose of providing examples. Within the context and scope of the MTCCS-III PWS, it is the responsibility of the TO PWS to resolve and clarify the

requirements and performance standards gained from the MTCCS PWS. For a given subtask in the MTCCS-III PWS, the absence of performance standards infers that the issuance of the standards will be solely from TO PWS.

C.1.4. Contract Employee Status. All personnel performing work under this PWS shall be employees of the Contractor and shall not be considered or treated as employees of the Government.

C.1.4.1. Employment of Government Personnel. The Contractor shall not employ any employee of the United States Government, either military or civilian, if such employment would create a conflict of interest, nor employ any of their relatives or individuals with whom the Government employee has a covered relationship, if such employment would result in a violation of Department of Defense (DoD) Regulation 5500.07-R, Joint Ethics Regulation (JER). This regulation restricts Government employees from engaging in several activities that create an appearance of impropriety or otherwise violate the law, including certain activities involving interaction with Contractors and their employees.

C.2. GENERAL REQUIREMENTS.

C.2.1. Task Order (TO) Management. The Contractor shall provide overall management and administrative efforts necessary to ensure that TO requirements are accomplished in accordance with the PWS.

C.2.2. Quality Control Program. The Contractor shall develop and maintain a quality control program to ensure service performance in accordance with this PWS and subordinate TO. The Contractor shall develop and implement procedures to identify, prevent, and ensure non-recurrence of defective services.

C.2.2.1. Quality Assurance. The Government will evaluate the Contractor's performance under this contract throughout the relevant TO period of performance (PoP). The Government will monitor the Contractor's performance by performing checks as contained in a TO Quality Assurance Surveillance Plan (QASP) (See Attachment X). The TO COR may inspect for compliance with contract terms throughout a TO PoP. The TO COR's evaluation will be based on the Contractor's compliance with the requirements set forth in this PWS and the TO PWS.

C.2.3. Security Management. This PWS and subordinate TO are for operations and operational services employing equipment that may contain classified information up to and including Top Secret/Sensitive Compartmented Information (TS/SCI). The Contractor shall comply with all applicable security requirements—physical, personnel, and information. The Contractor shall ensure personnel perform physical security, classified information security, and cybersecurity tasks IAW applicable regulations to safeguard classified information and equipment, high value Government purchased and owned equipment, and software. The Contractor shall obtain all required certifications and clearances, including personnel security

clearances.

C.2.3.1. Security Policy Compliance. The Contractor shall comply with Federal Acquisition Regulation (FAR) 52.204-2, Security Requirements. The Contractor shall comply with security policies and standard operating procedures (SOP) at MTC and RSC sites as well as applicable DoD, Army, Army Command, Army Component Command (ACC), and local Command security regulations and policies.

C.2.3.2. DD Form 254. The security requirements in this TO are in accordance with the attached DD Form 254. The Government will provide the DD Form 254 (See Attachment 3) to the prime Contractor during Phase In and before the start of each exercised Option Year. The Contractor shall provide the DD Form 254 for all sub-Contractors on the contract for the same period. The Government and the Contractor will use the Army Centralized Contracts and Security (ACCS) Portal for these actions.

C.2.3.3. International Traffic in Arms Regulations (ITAR). ITAR is a set of US Government <https://www.law.cornell.edu/wex/regulation> regulations that control the import and export of defense products and services. The purpose of ITAR is to safeguard national security, and to further American foreign policy interests.

C.2.3.3.1. The Contractor shall acquire and maintain proper licensing and clearance by the Department of State to allow technical data exportation. ITAR licensing acquisition timelines will be determined by the Government and stated in each TO PWS.

C.2.3.3.2. The Government will identify Countries participating in events or exercises during event planning based on individual TO requirements.

C.2.3.4. Personnel Security Clearances. The services provided under this PWS and subordinate TO require Secret clearances and in some cases TS clearances with access to SCI. All Contractor personnel performing work under a TO shall have at the minimum, an Interim Secret clearance with US ACCESS at start of full performance and shall maintain the level of security required for the life of the TO. A Contractor employee failure to maintain a valid security clearance shall result in the Contractor employee not being allowed to perform duties contained in a TO. Such failure of an employee does not relieve the Contractor from timely performance of the TO requirements. All Contractor personnel requiring privileged accounts on classified Government Information Systems and/or networks require a Single Scope Background Investigation (SSBI) or Tier 5 investigation, to include a current SSBI-Periodic Reinvestigation (SSBI-PR), or Tier 5 Reinvestigation (Tier 5R) if applicable, even if the individual does not require access to information classified as TOP SECRET.

C.2.3.4.1. SECRET Access. Contractor personnel requiring SIPRNET accounts shall have a final SECRET Clearance.

C.2.3.4.2. TOP SECRET Access. Contract personnel requiring routine access to a SCI facility (SCIF) shall have a final TS/SCI clearance. Contractors who operate the Upper Enclaves for WARSIM, ACE-IOS, IEWTPT or other systems as designated by the Government shall have a CI-POLY prior to operating the systems.

C.2.3.4.3. Sensitive Compartmented Information (SCI) Access. The Contractor FSO shall establish an Army Centralized Contracts and Security (ACCS) portal account with Intelligence and Security Command (INSCOM) by emailing usarmy.belvoir.inscom.list.contractor-support-element@army.mil. The FSO shall ensure the accurate CAGE codes registration with ACCS. The Contractor shall nominate personnel to receive SCI Indoctrination based on their duties and place of work. The individual TO Government SCI contract monitor (CM), is the final approving authority regarding SCI indoctrinations.

C.2.3.5. Defense Information System for Security (DISS). The Contractor shall vet all employees through (DISS), or its successor system, to ensure they have proper background checks for Common Access Card (CAC) and security badges. The FSO shall enter accurate CAGE codes and personnel status in DISS for assigned Contractor personnel. The Contractor shall submit information into DISS for each contract employee providing support under this contract.

C.2.3.6. Derogatory Information. The FSO shall immediately notify the relevant TO Security Manager (Government) and CM (as appropriate) upon receipt of any reported derogatory information that might adversely affect any Contractor employee's clearance or access.

C.2.3.7. Access to Installations and Facilities. The Defense Biometric Identification System (DBIDS) provides access to US Army and DoD installations. All Contractor employees working under this PWS and subordinate TO shall possess a valid, up-to-date CAC (according to their accreditation status) and current registration in DBIDS through the local Installation Access Control Offices.

C.2.3.7.1. Installation Access Compliance. The Contractor shall comply with applicable facility and local installation access and local security policies and procedures. The Contractor workforce shall comply with all personal identity verification requirements as directed by DoD, Headquarters, Department of the Army (HQDA), and/or local policy. The Contractor shall provide all information required for background checks as required by local authorities.

C.2.3.8. Operational Security (OPSEC). The Contractor shall comply with all applicable DoD, Department of the Army (DA), and local security regulations and procedures during the performance of this PWS and subordinate TO. The Contractor shall safeguard, and not disclose procurement sensitive information, computer systems and data, Privacy Act data, and Government personnel work products obtained or generated in the performance of this PWS. Neither the Contractor nor any of its sub-contract service providers shall disclose or cause to disseminate any

information concerning operations of military activities to unauthorized personnel. Such action(s) could result in violation of the contract and possible legal actions.

C.2.3.8.1. OPSEC SOP. The Contractor shall develop an Operational Security (OPSEC) Standing Operating Procedure (SOP)/Plan within 90 calendar days of contract award, to be reviewed and approved by the Government per AR 530-1. The Contractor shall identify an individual to serve as the OPSEC Coordinator IAW the TO.

C.2.3.9. Access and Handling of Information.

C.2.3.9.1. Privacy Act and Sensitive Information. The Contractor shall comply with requirements of DoD Directive (DODD) 5400.11 regarding control of privacy act information. Specifically, the Contractor shall ensure that any personally identifiable information (such as, but not limited to, individuals names and associated personal contact information or social security numbers) is restricted to access required for execution of this TO and is not disclosed or stored on any unsecure systems. Personnel shall adhere to the Privacy Act, (5 U.S.C. § 552a) and applicable Agency rules and regulations. Contractor personnel shall not divulge, or release, privacy data or information developed or obtained in the performance of this contract award until made public or the government specifically authorizes.

C.2.3.9.2. Handling of Classified Material. The Contractor shall secure classified information IAW DoD, DA, and local Command policies and regulations. The Contractor shall safeguard and sanitize classified material, removable media and equipment with classified information IAW AR 25-2 Information Assurance, AR 380-5 Department of the Army Information Security Program and NIST Special Publication 800-88 Guidelines for Media Sanitization. The Contractor will provide material not verified as being free of classified information to the Government for appropriate disposal. The Contractor shall not access, download, or further disseminate any classified information outside the execution of the defined contract requirements.

C.2.3.9.3. Release of Information. The Contractor shall release no classified information to a "non-U.S. citizen" without prior written approval from the responsible TO COR. The Contractor shall not release any news (including photographs and films, video, public announcements, or denial or confirmation of same) or Government related information on any subject matter within this PWS or any phase of any program herein to the media or any other unauthorized users without the prior written approval of the responsible TO COR. The Contractor shall release no controlled unclassified information without prior written approval from the responsible TO COR.

C.2.3.10. Physical Security. The Contractor shall safeguard all Government equipment, information, and property provided for Contractor use in accordance with the local Government Security SOP and applicable Army Regulations. At the close of each work period, Contractor personnel shall secure all Government facilities, equipment, and materials IAW DoD, U.S. Army, and local Command physical security

policies and SOPs. The Contractor shall assist the Government in identifying, reporting, and correcting physical security and information assurance violations.

C.2.3.12. Sensitive Compartmented Information Facility (SCIF). The Contractor shall provide operational support and management for SCIF at selected MTC locations as directed by the Government in subordinate TO.

C.2.4. Personnel Requirements.

C.2.4.1. Privileged Access. Contractor employees requiring privileged information system accounts shall comply with appropriate Information Assurance Technical (IAT)/Information Assurance Management (IAM) Level baseline certification, computing environment (CE), and recertification procedures (as applicable) outlined in DoDD 8140.01, DoDI 8140.02, DoDM 8140.03, AR 25-2, AR 380-67, and all related DoD and Army Cybersecurity policies and regulations. Contractor employees requiring privileged access shall have a certification in the primary CE that they will operate in, and certificates of training for all subsequent CE. Contractor personnel may be required to obtain multiple CE certifications or certificates of training if they are responsible for administering services/systems that span multiple CEs. Contractor personnel failing to meet DoD Cyberspace Workforce Framework (DCWF) requirements will immediately have all privileged access accounts revoked. The Contractor is responsible for in-processing, out-processing, and managing the required certification documentation, appointment orders, and privileged access agreements of their employees on the Army's Identity, Credential, and Access Management (ICAM)– Account Validation System (AVS). Quarterly, the Contractor shall assist the Government in validating positions requiring privileged accounts on information systems.

C.2.4.2 IA Certification. In accordance with DoDD 8140.01, DoDI 8140.02, and DoDM 8140.03, Contractor employees shall have appropriate DoD Cyberspace Workforce Framework baseline certifications for the components, devices, and operating system(s) they support, as required by this PWS and subordinate TO. Contractor personnel shall obtain the appropriate certifications prior to beginning work on a TO. The Government will not give any exceptions to this requirement. The Government will consider the designated position unfilled until the individual has met the baseline and CE certification requirements for his/her position. For the time the positions remain unfilled by appropriately qualified and certified individuals, the Contractor may not receive the associated funding for said unfilled positions. The Government provides a six (6) month grace period for Contractor personnel who change DCWF roles, specifically moving from a lower to a higher level to comply with baseline and CE requirements at the new level. Contractor personnel who do not achieve certification or full compliance at the end of the six (6) month grace period, will revert to the previously held DCWF role, and will lose any permissions/access to Government Information Systems or services that require a higher category of certification.

C.2.4.2. Personnel Conduct. The Contractor is responsible for the performance and conduct of Contractor and subcontractor employees. The Contractor shall ensure that the conduct of Contractor employees does not bring discredit upon the U.S Army. Personnel employed by the Contractor in the performance of this PWS or any representative of the Contractor entering the Installation shall abide by the security regulations listed in a TO and shall be subject to Government checks as necessary.

C.2.4.3. Identification of Contractor Employees. All contract personnel attending meetings, answering Government telephones, and working in other situations where their Contractor status is not obvious to third parties shall identify themselves as Contractor personnel to avoid creating an impression in the minds of members of the public, they are Government officials (FAR 37.114(c)). The Contractor shall ensure all documents or reports the Contractor produces are suitably marked as Contractor products. The Contractor shall ensure appropriate disclosure of Contractor participation during meetings, conferences, phone calls, and electronic messaging.

C.2.4.3.1. Contractor-Provided Badges. The Contractor shall provide employees with easily readable identification badges.

C.2.4.3.2. Government-Provided Badges. The Government will provide all Contractor personnel with identification credentials (i.e. a security badge) displaying first name, middle initial, and employee's last name, employee's security clearance level, status as a contractor, and the employees' photograph. Contractor employees shall have the Government issued identification credentials in their possession and visible while on Government property.

C.2.4.4. Required Government Accounts.

C.2.4.4.1 DoD Enterprise Email Account. The Contractor shall ensure all Contractor employees performing services under this TO obtain and maintain an DoD Enterprise Email Account. Contractor personnel shall initiate an account request for the respective designated Government representative to approve. The Contractor shall establish an account within three (3) working days of the Contractor employee receiving his/her CAC. Changes in account status will be coordinated with the designated Government representative within three (3) days of the change. Contractors will have a DoD Enterprise Email Account provisioned prior to issuance of SIPRNet Tokens or ASCL Tokens. Contractor personnel are required to follow the local Government organization's in-processing policy to ensure proper provisioning of accounts and services.

C.2.4.4.2. ICAM Army Account Validation System (AVS). All Contractor and associated subcontract personnel with access to government information systems shall be registered in the AVS at commencement of service at <https://armyeitaas.sharepoint-mil.us/teams/AVS/SitePages/Home.aspx>

C.2.4.4.3. Classified Accounts. The Contractor shall be responsible to ensure

Contract employees requiring access to classified networks for duty execution will have the appropriate accounts.

C.2.4.5. Accompanying the Force. Contractors shall comply with Defense Federal Acquisition Regulation Supplement (DFARS) Clause 252.225-7040 requiring performance or delivery in a foreign country. Contractors shall comply with DFARS Clause 252.225-7043 and with the requirements of AR 525-28, Personnel Recovery. In addition to AT/OPSEC considerations, all U.S. and non-local national Contractor employees will comply with the travel requirements in the DoD Foreign Clearance Guide (FCG), available at <https://www.fcg.pentagon.mil/fcg.cfm>. For more information on Contractor travel requirements, see paragraph C.2.9. Contractor Travel. There shall be no mission failure due to failure to comply with the requirements of this paragraph.

C.2.4.6. Employee Termination. The Contractor shall notify the TO COR and Security Office of employee termination as soon as the termination date is known. The Contractor shall ensure Contractor employees leaving a TO return all Government issued items such as CAC PRIV, keys, and Government issued badges. The Contractor shall expedite the transfer of Government property if applicable. The Contractor shall provide the TO COR with written proof that all Government issued item have been returned NLT three (3) calendar days of Contractor employee termination date unless the COR grants a temporary delay. The Contractor shall ensure that contract personnel terminated for cause immediately surrender all Government issued security badges, network access tokens, keys and key cards, to the Government. The Government will immediately revoke all access to Government Information Systems and services, and physical access to Government facilities.

C.2.5. Personnel Training Requirements. The Contractor shall provide a fully trained and certified workforce. The Contractor is responsible to provide training for Contractor personnel and to keep them abreast of advances in the state-of-the-art, or for training Contractor employees on equipment, computer languages, and computer operating systems that are available on the commercial market. When required training is available from the Government and there is an associated cost to the training, the Government may provide this training to the contractor.

C.2.5.1. Cybersecurity Training. All Contractor employees and associated subcontractor employees must complete the DoD Cyber Awareness Challenge Training and read/sign an IT User Agreement before issuance of network access / user account and annually thereafter.

C.2.5.2. New Equipment Training (NET). The Government may provide NET in conjunction with new simulations, C2IS, and/or changes to major information system platforms (e.g., operating systems, networks, or other hardware or software) or technology (C2IS include standard U.S. Army, U.S. Joint, and NATO systems). The Contractor shall support this training at the designated site with all applicable personnel and is responsible for cross-training subsequent employees as required.

For software changes that the Government determines does not require a NET, the Contractor shall evaluate the changes and incorporate appropriate in-house training for their personnel to maintain proficiency. If the NET does not occur at the MTC, the Government will pay travel costs to bring Contractor personnel to the training site.

C.2.5.3. Anti-Terrorism (AT) Training.

C.2.5.3.1. AT Level I Training. All Contractor employees shall complete AT Level I awareness training within 30 calendar days of new employees' commencing work on this TO and annually thereafter. The Contractor shall submit certificates of completion for each Contractor employee and subcontractor employee to the. AT Level I awareness training is available at <https://jkodirect.jten.mil/Atlas2/page/login/Login.jsf>. The requirement for this training is covered in Department of Defense Instruction Number 2000.16, "DoD AT Standards".

C.2.5.3.2. AT Awareness Training for Contractor Personnel Traveling Overseas. Contractors required to travel overseas while performing requirements of this contract shall comply with the DoD Foreign Clearance Guide (FCG) at <https://www.fcg.pentagon.mil/fcg.cfm> and the Department of State Travel Warnings at <http://travel.state.gov>. There shall be no mission failure due to non-compliance.

C.2.5.3.3. iWatch Training. iWatch is a community awareness program created to educate the Army community about behaviors and activities that may have a connection to terrorism and criminal activity. The Contractor and all associated subcontractors working within an Army-controlled installation, facility, or area, shall brief all employees on the local iWatch program (training standards provided by the Antiterrorism Officer for the requiring activity). This locally developed training will be used to inform employees of the types of behavior to watch for and instruct employees to report suspicious activity. iWatch training can be accessed at <https://www.mepcom.army.mil/Home/Contractors/>.

C.2.5.4. OPSEC Training. All Contractor employees shall complete Operational Security (OPSEC) training. Per AR 530-1, Operations Security, new Contractor employees shall complete Level I OPSEC training within 30 calendar days of reporting for duty. All Contractor employees shall complete annual OPSEC awareness training.

C.2.5.5. Combating Trafficking in Persons (CTIP). All Contractor employees shall complete CTIP training. Per DoD Instruction 2200.01, "Combating Trafficking in Persons" and FAR 22.27, 52.222.50, Combating Trafficking in Persons, new Contractor employees shall complete certification training within 30 calendar days of reporting for duty. All Contractor employees shall complete annual CTIP awareness training.

C.2.5.6. Other Training. Other mandatory Government training may be required to

meet local, Army Command, ACC, HQDA, and DoD mandatory training directives. For example: Threat Awareness and Reporting Program (TARP), ISOPREP, and Controlled Unclassified Information (CUI). The COR will inform the Contractor when new training requirements emerge.

C.2.5.7. Government Funded Training. The Government may fund training identified to accomplish specific tasks due to required equipment/system fielding and/or new or emerging requirements. Contractor employee training may be authorized by a TO COR when the Government determines it to be in the best interest of the Government. Government Funded training may occur if the specific training is advantageous to the Government.

C.2.5.8. Professional Development Certification. The Contractor shall ensure their workforce is trained, certified, and current with Army training doctrine, MTC SOPs, and training requirements.

C.2.6. Surge Support. At Government discretion, Surge Support may be required to provide services to meet temporary increased training requirements for specific or non-standard training events. The Contractor, together with the COR, determine the most cost-effective way to meet the increased training requirements. The Contractor, at the direction of the COR, shall analyze the training requirement, first determining if the surge support can be met by “flexing” current Contractor personnel hours. If the requirement exceeds the ability of the Contractor to “flex” hours, then the Contractor shall conduct a detailed analysis to determine whether providing overtime to current on-site personnel or bringing in additional “surge” personnel is the most cost-effective way to meet the requirement. For surge support requests that the Contractor is unable to accomplish under the fixed price structure, the Contractor shall present the COR with a detailed Rough Order of Magnitude (ROM) and detailed manning document to determine costs to. Performance shall not begin until the COR issues Travel Approval Request (TAR) or provides verbal approval in advance. The COR will determine the period of performance at the time the TARs are exercised.

C.2.7. Reserved.

C.2.8. Contractor Manpower Reporting Application (CMRA). The Contractor shall ensure ALL Contractor labor hours (including subcontractor labor hours) required for the performance of services under this TO are reported via a secure data collection site. The Contractor (and all subcontractors providing direct labor under this TO) shall report complete and accurate data for the labor executed during the period of performance during each Government fiscal year (FY), which runs from October 1 to September 30. The Contractor shall input the data into the appropriate CMRA reporting tool, accessed via a secure web site at <https://sam.gov>. While inputs may be reported any time during the FY, the Contractor shall report all data no later than October 31 of each calendar year. The Contractor shall enter initial data into the appropriate CMRA tool, filling in all required data fields, to establish the basic contract record no later than 15 working days after receipt of TO award or contract

modification incorporating this clause. The Contractor shall notify the COR when the basic contract record has been established in the appropriate CMRA tool. Contractors may direct technical questions to the sam.gov help desk at <https://sam.gov/content/help>.

C.2.9. Material/Data Rights. The Government has unlimited rights to all technical data, documents, websites, and training material produced under this contract. All technical data, documents, materials, and created websites, to include the source codes of any software produced under a TO, shall be Government-owned and the property of the Government with all rights and privileges of ownership/copyright belonging exclusively to the Government. The rules governing these assertions are prescribed in DFARS clauses 252.227-7013 Rights in Technical Data Noncommercial Items and DFARS 252.227-7014 Rights in Noncommercial Computer Software and Noncommercial Computer Software Documentation.

C.2.10. Applicable Publications (See Attachment XXX-Tech Exhibit).

C.3. PERFORMANCE REQUIREMENTS.

C.3.1. General Tasks. The Contractor shall support the various exercises and training events, provide design planning, scenario development, and coordination for all events; preparation of the training (hardware and software) and the facility; provide technical assistance to the Government during the execution phase; support After Action Review (AAR); and operate and restore the training facility and areas to normal configuration.

C.3.1.1. Reporting. The Army is moving towards live modeling for programming requirements in the PPBE. The Contractor shall track usage, workload, and other critical data, as required by the Government, for all training and non-training events. The Contractor shall prepare and submit periodic reports in accordance with each TO. The COR will provide and update reporting formats as necessary based on HQDA, local command, and MTC requirements.

C.3.1.2. Scheduling and Event Coordination. The Contractor shall assist the Government with planning, scheduling, and controlling the resources allocated to meet the requirements identified in each TO. The Contractor shall assist the Government to coordinate, track, and de-conflict the usage of all MTC resources (personnel, equipment, and facilities). The Contractor shall update and maintain the MTC calendars, record all training events and exercises requests, including individual, staff, and unit levels. The Contractor shall review the master calendar and inform the government of any potential conflicts or issues with projected training. This calendar shall be kept current and display all MTC events, as the Government directs.

C.3.2. Training and Exercise Support, and Integration.

C.3.2.1. Collective Training. The Contractor shall provide collective training, exercise and integration support, training event design, planning, and constructive simulation support for (but not limited to): Military Decision-Making Process (MDMP), Staff Training Exercise (STX), Field Training Exercise (FTX), Command Post Exercise (CPX), Tactical Exercise without Troops (TEWT), Mission Rehearsal Exercise (MRE or MRX), and Warfighter Exercise (WFX) as defined in FM 7-0, Training. The Contractor shall develop and replicate a realistic training environment that encompasses the dimensions and complexities of military operations. Training Scenarios shall be focused on current operations (CUOPS) training, Military Decision Making (MDMP) and across all WfF identified by the unit commander. The Contractor shall provide staff training events using simulations as directed by the Government. The Contractor shall provide over-the-shoulder support to the training audience, as the Government directs, to assist the training audience working through staff processes related to an exercise.

C.3.2.1.1. Large Training Events. Large training events or exercises typically occur at the Brigade through Corps-level and are multi-echelon (and increasingly multinational) events designed to train and stress the command and staff interactions between echelons. Large events and exercises are typically (but not exclusively) stimulated with a high-resolution federation of simulations (i.e. Joint Land Component Constructive Training Capability (JLCCTC), the Joint Live Virtual/Constructive federation (JLVC), or a similar capability). Large events are typically planned using the Joint Exercise Life Cycle (JELC) with planning events normally occurring over 12–24-month period preceding execution. Large events and exercises normally run between 12 and 24 hours per day, over 10 to 14 consecutive days. Schedules may vary based on individual TO requirements.

C.3.2.1.2. Home station Training. The Contractor shall provide collective staff training, unit staff Drills, functional and integrated command post training events, and training mission command tasks outline in the Combined Arms Training Strategy (CATS) based on a commander's training objectives. BDE and below level training events and exercises usually occur over a 2–5-day period. BDE and below training events normally run 12-18 hours per day; 24-hour training events occur but are the exception. Schedules may vary based on individual TO requirements.

C.3.2.1.2.1. Medium Training Events. Medium training events typically occur at the battalion and brigade level and can be multi-echelon events. A low-overhead simulation, such as DXTRS or LOTS, or a constructive ground simulation or simulation federation such as JLCCTC or JLVC, are used to provide a Common Operating Picture (COP) for training or a Master Scenario Event List (MSEL) to achieve training objectives. Training Scenarios typically focus on current operations training, MDMP, or on specific Warfighting Functions such as Fires or Intelligence.

C.3.2.1.2.2. Small Training Events. Small unit training is typically focused on squad,

platoon and company level (Company/Battery/Troop), using Games for Training (GFT) or other virtual systems.

C.3.2.1.2. Combat Training Center (CTC) Support. The Contractor shall provide support for CTC events and exercises, as directed by the Government. The Contractor shall provide simulation, and rotational products and services in support of CTC rotations, in accordance with exercise event tests, planning products, and rotational exercise guidance and planning timelines.

C.3.2.2. Exercise Planners. The Contractor shall provide dedicated exercise and simulations/technical planner(s) for each exercise and event. The Contractor shall provide dedicated exercise planning and execution expertise for replicating the dynamic complexities of the Operating Environment (OE) and OPFOR in compliance with Army Regulation (AR) 350-2 (OE/OPFOR Program).

C.3.2.4. Scenario Development and Management. The Contractor shall provide scenario creation, development, documentation, maintenance, and management services. The Contractor shall be responsible for maintaining knowledge and experience to provide products at two levels above the rotational unit, IAW current doctrine across and within each US WfF functional areas as appropriate to meet training objectives.

C.3.2.4.1. MSEL and Storyline Management. The Contractor shall provide storyline and master scenario events list (MSEL) development and synchronization throughout the planning process. The Contractor shall participate in, and as required lead, storyline and MSEL development conferences during the planning process. The Contractor shall deliver Storyline and MSEL products IAW timelines established in the ESP and shall conform to guidance developed during scenario planning meetings and discussions and validated by the Government. The Contractor shall be prepared to provide dynamic scripting during execution, as the Government directs.

C.3.2.4.2. MSEL Tools. The Contractor shall execute MSEL management and operate current MSEL management tools as the Government directs. The Contractor shall provide system administration and configuration management functions for Government designated exercise/event MSEL tool servers.

C.3.2.5. Event Life Cycle Support. The Contractor shall participate in all events, as the Government directs. The Contractor shall provide SME support during all phases of exercise planning. The Contractor shall provide input, and as required, develop the draft planning products for exercise design and technical planning products. Input and draft products shall be feasible, achievable, and supportable. The Contractor shall meet the published exercise and events timelines. The Contractor shall support all testing events such as Risk Reduction Events (RRE), Event Functional Tests (EFT) Event Operational Tests (EOT), and Operational Readiness Tests (ORT), and other tests as the Government directs. These events may occur outside the MTC footprints in allied and partner countries.

C.3.2.5.1. Event Life-Cycle Management. The Contractor shall assist the Government with the management and administration of planning events. This shall include preparatory steps such as developing the calling message, setting the agenda and timeline, defining syndicates and syndicate deliverables. During execution of the event, when the Government directs, the Contractor shall lead the events. The Contractor shall meet all event timelines and requirements for event deliverables as determined in planning meetings.

C.3.2.6. Exercise Support Plan (ESP). For each exercise or event, IAW the JELC, the Contractor shall provide written input to the ESP that details how the Contractor will support the exercise, to include staffing, room build, and logistics support. The Contractor shall provide Contract personnel, by name, against required positions IAW the Exercise Support Manning Document (ESMD). The Contractor shall provide ESP and ESMD input to the Government lead planner IAW the lead planner's guidance and established suspense dates.

C.3.2.7. Exercise Design Products. The Contractor shall provide all required exercise products the Government directs, in support of an exercise. Exercise design products are those products defining the operational requirements of the exercise.

C.3.2.7.1. Product Creation. The Contractor shall create Operations Orders (OPORDS) and related products to support exercises. The Contractor shall provide products written and formatted in accordance with current applicable doctrine, as directed by the Government.

C.3.2.7.2. Operations Orders. The Contractor shall produce and develop operations orders (OPORDs) and related relevant annexes, Graphic Overlays, FRAGOs, and data products, up to Theater level Operations in accordance with current doctrine, as the Government directs. The Contractor shall write operations orders at the echelon(s) as the Government directs. The Contractor shall synchronize orders to the exercise objectives and facilitate the Training Audience meeting its training objectives.

C.3.2.7.3. Operational Graphics. The Contractor shall create and provide graphics with the OPORDs and FRAGOs in mediums compatible with current Mission Command operating systems. The Contractor shall develop and produce graphical products as the Government directs. Graphics shall include Maneuver, Fires, Logistics, Intelligence, and other specialized graphics as the Government directs.

C.3.2.7.4. Additional Exercise Products. To ensure the training audience meets the training or exercise objectives, un-forecasted or un-planned products (such as FRAGOs or INTSUM) may be necessary based on the outcomes of Training Audience activity and/or direction of the Senior Trainer or Exercise Director. The Contractor shall be prepared to produce additional FRAGOs that may depart from or alter previous pre-rotational FRAGOs in terms of mission, units, locations, and times.

The Contractor shall deliver the Exercise Products in a timeline the Government directs.

C.3.2.7.5. Opposing Forces (OPFOR) Support. The Contractor shall develop threat products that support the exercise intelligence planner and SIO during exercise planning and execution. These products include, but are not limited to, an OPFOR operational- command level operations order based on OPFOR doctrine, emerging hybrid threats, and current Threat Tactics, Techniques, and Procedures (TTP). Products and services shall be accurate and delivered on time as specified in the Exercise Directive or training support plans. As part of MSEL and OPFOR development, the Contractor shall develop scripted products that mimic real-world intelligence product formats.

C.3.2.7.4. Exercise Technical Documentation. The Contractor shall develop all technical (RMF/Configuration Management) documentation required for exercise or event execution. Documentation shall include but not limited to: DISA standard network and system/service diagrams, net flow/dataflow diagrams, simulation/stimulation architecture diagrams, Ports/Protocols/and Services (PPS) listing, Secure Technical Implementation Guides (STIG) and Security Requirements Guides (SRG) compliance benchmarks/checklists, Information Assurance Vulnerability Alert (IAVA) remediation/mitigation reports, and network device configurations, and technical test plans.

C.3.2.7.5. Product Reference Library. To maximize reusability and reduce planning time between exercises, the Contractor shall maintain and expand a reference library of relevant base operations orders, with annexes, that covers the types of units supported by the MTC.

C.3.2.8. Exercise Control (EXCON) and Response Cells.

C.3.2.8.1. EXCON. The Contractor shall participate in EXCON activities as the Government directs. The Contractor shall plan, coordinate, and resource an EXCON as the Government directs. EXCON shall be able to manage and integrate all simulation and stimulation, control the event tempo, manage MSEL events, and regulate Higher Command (HICOM), Opposing Forces (OPFOR), and subordinate unit work/ response cells. During event execution, the Contractor shall participate, support, and when necessary, lead efforts for coordination and synchronization of products and activities within the EXCON. The Contractor shall monitor the flow of the training and recommend changes to training audience stimulation (data injects) or prescribed scripted injects to support achieving the stated training objectives.

C.3.2.8.2. Response Cells. The Contractor shall provide response cell(s), response cell personnel, and/or cell management during exercises and training events as the Government directs. The type of response cell(s), Higher, Adjacent, Lower, Supporting and Supported (HALSS) elements, is determined during event planning and may require surge personnel support. The contractor shall provide response

cell(s) capable of replicating and role-playing the appropriate echelon Command Post. Response cell activities shall include cell management, over-the-shoulder support for MSEL/Complex Battlefield Injects (CBI), and positional role-playing. The Contractor shall provide personnel familiar in all of the current WfF and operations associated with the response cell.

C.3.2.8.3. Realistic Training. The Contractor personnel may be required to replicate key actors during exercises and training events. Contract personnel shall respond to queries by, or input from the training audience, and provide a credible response based on the OE and in consonance with scripted story lines.

C.3.2.9. Information Operations (IO). The Contractor shall provide IO support for MTC supported exercises and training events. Contractor IO support shall include all planning events as the Government directs. The Contractor shall set up and run the TRADOC Information Operation Network (ION), or similar Government approved tools, for exercises as the Government directs; ION allows the training audience to include IO as a part of their training. The Contractor shall recommend software and equipment required to perform tasks in this paragraph.

C.3.2.9.1. Audio Visual (AV) Training Products. The Contractor shall provide MTC AV media capabilities in support of events and exercises. The Contractor shall produce both Classified and Unclassified media products in support of exercises, scenarios, or specific exercise injects. AV support shall include road-to-war/road-to-crisis videos, video news, simulated social media, battle summaries, and print products. Other video, audio, and graphic products will be coordinated through the designated Government representative. The Contractor shall merge stock footage and locally captured video to provide video camera capture and editing operations for simulated news operations. The Contractor shall produce still, moving, audio, social media, and print media products, to include development and script writing, supporting the exercise storylines, scenario and AAR products.

C.3.2.9.2. Public Affairs Officer (PAO) Training Support. In conjunction with the unit PAO, the Contractor shall provide media engagement training and interview training. The interviews shall replicate professional commercial broadcast interviews and provide selected training unit personnel with experience, participating in interviews and responding to reporters' questions while being filmed. The Contractor shall integrate and synchronize interviews with the exercise MSEL and cover subject matter associated with the unit training objectives.

C.3.2.9.3. Capability Media. The Contractor shall provide media highlighting MTC capabilities for internal Government use. Media can include television, print, and social media as the Government directs. These media products shall contain accurate information and be reviewed by the Government, prior to release to other Government media.

C.3.2.9.4. AAR AV Training Product Support. The Contractor shall provide AAR

products, as the Government directs. AAR products consist of written input of observations, film excerpts, and digital screen shots. The products shall be delivered IAW the event or exercise planning timeliness.

C.3.2.10. AAR. The Contractor shall provide data collection, input, and products to support unit AAR development and support presentation as the Government directs during JELC planning or during exercise AAR preparation.

C.3.2.10.1. Training Audience AAR. The Contractor shall work with units to refine training objectives and enable the Training Audience AAR. The Contractor shall assist with the preparation of AAR plans for the training audience that outline data collection, analysis parameters, presentations, and final AAR report. The Contractor shall provide timely data collection, and relevant analysis and synthesis, as input for the AAR. As the Government directs, the Contractor shall observe the training audience to identify and record the areas of strengths and weaknesses.

C.3.2.10.1.1. Conduct of the AAR. As the Government directs, the Contractor shall participate in, and support Government led AARs.

C.3.2.10.2. AAR Tools. The Contractor shall provide expertise in the use of current AAR tools fielded to MTC and any tools fielded in the future. Current AAR tools include After Action Review Systems (AARS), PERSPECTIVE, Combat Training Center-Instrumentation System (CTC-IS), and GFT AAR. AAR data collection shall be in correct format, grammar, and spelling, include applicable data and are submitted IAW timelines established during JELC planning and execution. The Contractor shall provide all required products on time to the Government as directed in the ESP or other documents. Products shall be accurate and require minimal Contractor correction.

C.3.2.10.3. MTC Internal AAR. The Contractor shall participate in internal AARs IAW timelines the Government establishes. The Contractor shall submit a written report to the Government for the internal Government-led exercise AAR. In the report, the Contractor shall provide issues, discussions, and recommendations relevant to the setup, technical support, exercise conduct, products, and Contractor performance. The Contractor shall produce and implement a correction plan, with milestones, to correct or improve noted Contractor related deficiencies and weaknesses.

C.3.2.11. Multinational (MN) Support. The Contractor shall support MN exercises and assist MN technical staff during direct exercise/event support as directed by the Government by providing coaching or over the shoulder mentoring. The Contractor shall adhere to ITARS constraints.

C.3.2.12. Academic Support. The Contractor shall develop, prepare, and conduct academic blocks of instruction, as the Government directs. Academic support will include but is not limited to Military Decision-Making Process (MDMP),

Comprehensive Operations Planning Directive (COPD), Joint Operation Planning Process (JOPP), US Army and NATO doctrine, orientation to the exercise OE, developing training and exercise objectives, Exercise Control functions, and AARs.

C.3.2.13. Non-Standard Events. The Contractor shall support non-standard events in MTC facilities as the Government directs. Examples of non-standard events include but are not limited to briefings, meetings, workshops, **academic classes**, and Mobile Training Team events. Support requirements for non-standard events will vary, but typically consist of IT, network, facility, and security support. The Contractor shall coordinate MTC requirements with the organization requesting support, and assist in setup, configuration, and teardown.

C.3.3. Not Used

C.3.4. Leader Training. The Contractor shall create and provide training to improve and sustain Unit Leader skills for Mission Command, decision making and critical thinking.

C.3.4.1. Leader Training Products. The Contractor shall design and deliver leader training products and services that complement and reinforce a Commander's leader training and leader development programs. Examples include, but are not limited to training vignettes, leader training classes, doctrine classes, classes directed by command directives and priorities. The Contractor shall create new or modify existing collective training scenarios, training vignettes, databases, and supporting documentation for individual, collective and leader training requirements to meet the training objectives across the current operational environment. The Contractor shall create and maintain a scenario library containing existing training scenarios and exercise support and planning documents.

C.3.5. Cybersecurity and Risk Management Framework (RMF).

C.3.5.1. Cybersecurity and RMF Program. The Contractor shall execute security requirements and activities related to DoD RMF Process and Cybersecurity Programs for all MTC network enclaves and simulation systems. The Contractor shall execute, monitor and support Government-directed compliance and vulnerability management activities related to DoD, Army, and MTC Cybersecurity programs for Programmed Managed (PM) systems, to include assessments, non-compliance mitigation strategies, documentation (policy, processes, procedures) reviews, cybersecurity vulnerability and compliance software tools, RMF continuous monitoring program, Enterprise Mission Assurance Support Service (eMASS) security controls and/or tailored controls included in the Cybersecurity Risk Management Framework (CSRMF) and associated tracking tools, artifacts, and POA&M support management and remediation.

C.3.5.2. Cybersecurity. The Contractor shall provide Cybersecurity security administration service IAW DoD Cybersecurity policies and regulations and RMF

Process. The Contractor shall perform security administration functions to include compliance, vulnerability, configuration management, and incident response. The Contractor shall continuously monitor document and report existing security configurations and implemented controls (technical, logical, physical, and procedural) IAW applicable security policies, directives, guidance and best practices.

C.3.5.2.1. RMF Compliance. The Contractor shall support and implement, under Government supervision, an RMF continuous monitoring strategy (RMF-CMS) that complies with all applicable regulations, orders, policies, (DoDD 8140.01, DoDI 8140.02, and DoDM 8140.03), SOPs, and Best Business Practices (BBPs). The Contractor shall maintain all assigned Government IS in accordance with the standards established by the RMF, as well as any additional IA and Cybersecurity orders, regulations, or policies. Personnel shall be familiar with and comply with RMF requirements for Assessment and Authorization of assigned Government IS and network enclaves. Contractor personnel shall implement DISA STIGs or SRG on assigned Government IS and associated network and systems devices or infrastructure. Contractor personnel shall implement IAVA remediation/mitigations according to DoD required standards to ensure the secure operation of organizational software, services, servers, systems, and network devices.

C.3.5.2.2. RMF Document and Artifact Management. The Contractor is responsible for developing and providing documentation and artifacts that prove compliance with RMF Security Controls. The Contractor shall create and maintain SOPs, technical configurations, hardware and software lists, and system (i.e., system engineering, topologies, and diagrams) and network diagramming (boundary and data flow) documents IAW RMF process, and DoDI 8510.01. The Contractor shall maintain auditable configuration management documentation to track all hardware/software changes to system layouts and system modifications, patches, updates, and configuration changes. The Contractor shall update and maintain all documentation as an accurate and current representation of the systems and network architecture. The Contractor shall notify and gain prior government approval for any proposed document modifications affecting DoD, US Army, Army Command, and MTC Program security strategies, directives, and policies.

C.3.5.2.3. RMF Documentation Availability. Upon Government request, existing documentation shall be available to Government personnel. Documentation shall be available for the Government review in a format as the Government directs.

C.3.5.3. Organizational Inspection Program (OIP) Network Documentation. The Contractor shall support the Government with security requirements and activities related to local Command OIP to include Account Validation System (AVS)/CART/RMF Accreditation/TSP documentation/artifact gathering, compliance reviews and assessments, and corrective measures.

C.3.5.4. Incident Handling (IH) and Incident Reporting (IR) Support. The Contractor provide support, execute, and/or facilitate incident handling and response

to include containment processes, procedures, reporting, and execution of required documentation IAW with US Army, Local Command, and MTC IR/IH policy and procedures. The Contractor shall immediately report to the Government all suspicious personnel, network and system generated actions and/or activities to the ISSM and Information System owner.

C.3.5.5. Continuity of Operations (COOP)/ Alternate Processing/Disaster Recovery. As the Government directs, the Contractor shall support, execute, and/or facilitate COOP and DR requirements and activities IAW AR 25-2, DoDI 8510.01, NIST SP 800-53, CSRMF, and Local Command/MTC guidance, policy, and procedures. This support includes deployment of personnel and exercise training technology to other designated local and remote locations in the event of catastrophic events related to technical, environmental, electrical power, base lockdowns, or other events compromising or incapacitating training operations and/or mission. COOP/DR actions shall be executed IAW with Army Command/MTC COOP/DR policy and procedures.

C.3.6. Technical Services and Support.

C.3.6.1. Technical Overview. The Contractor shall provide technical services, under Government direction. This support includes technical support for administrative systems, system administration services, network administration services, database build and management, implementation and execution of Cybersecurity requirements, and event/exercise setup and recovery. The Contractor shall configure telecommunications systems and services for exercises, classes, seminars, and training events.

C.3.6.2. Network Enclave Management. The Contractor shall provide network enclaves, information system infrastructure, and telecommunications services at the MTC and other sites in support of exercises and training events, as the Government directs. The Contractor shall engineer, operate, maintain, protect, and defend MTC network infrastructure and telecommunication devices (e.g., VoIP call manager). The Contractor shall plan, install, administer, maintain, and recover MTC wide area networks (WAN) and local area networks (LAN), as the Government directs, to ensure timely execution of training events and exercises. Systems management functions include installing software, managing user accounts (e.g., Active Directory and other services), constructing communication files, and archiving backup files, recovery, maintaining the technical library, secure operation and storage of encryption devices, and tuning systems parameters for optimal functioning.

C.3.6.3. Training Networks. Contractor shall provide support for MTC classified and unclassified training networks. These functions include, but are not limited to: network cabling, cable management, hard drive imaging, system administration (e.g., Active Directory and other services), software troubleshooting, network administration, identification of faulty equipment, Global Data Product files, and network or system/service connectivity troubleshooting. The Contractor shall install,

maintain, and manage Host Based Security System (HBSS) on MTC Training Network Enclaves as part of the defense-in-depth security strategy. The Contractor shall provide (monitor, maintain) stable training networks, linkage to external training support WANs (e.g., Mission Partner Environment/Networks (MPE), Joint Training and Experimentation Network (JTEN), Combined Federated Battle Laboratories Network (CFBLNet), etc.), and replicated closed tactical networks at the MTC, and other sites as directed by the Government. The Contractor shall maintain training network systems in compliance with DoD RMF Program requirements.

C.3.6.4. Training Network and Systems Management. Under Government direction, the Contractor shall manage the setup, security configuration, monitoring, and maintenance of all routed and switched simulation network infrastructure component devices (routers, switches, Hubs, WAN links, etc.) and enclave information systems designated to support exercises/events. The Contractor shall provide training network and systems management IAW DoD Instruction 8551.01 Ports, Protocols, and Services Management (PPSM), DoDI 8410.03 Network Management (NM), and NIST SP 800-13 Telecommunications Security Guidelines for Telecommunications Management Network.

C.3.6.4.1. Training Network Architecture. The Contractor shall document (i.e., standard processes and procedures, configurations, diagrams, HW/SW, PPSM) the implemented network environment in support of exercises and events. The Contractor shall submit to the Government all simulation network documentation including technical operating processes and procedures, configurations, diagrams, and HW/SW lists in a format as the Government directs.

C.3.6.4.2. Cross-Domain Solution (CDS). The Contractor shall engineer, configure, operate, and maintain CDS systems supporting multiple operational and exercise environments. The Contractor shall perform these tasks on fielded Government CDS technologies, including, but not limited to: SimShield and Radiant Mercury (RM). The Contractor shall collect mission specific data exchange and interface requirements; create/edit tasks processing threads and message release constraint rules to satisfy mission objectives; coordinate and obtain CDS accreditation ICW the Cross Domain Service Element (CDSE), CDS PMO and other agencies.

C.3.6.4.3. Training Network Expansion. In the event of an expansion within the MTC footprint, the Contractor shall provide expert advice concerning equipment needed for the expansion and assist with infrastructure research to provide an applicable cost analysis for the procurement process. Once expansion planning is finalized, the Contractor shall oversee the installation, initial setup, and configuration of the new WAN Node.

C.3.6.5. External Simulation Network Management. The Contractor shall connect and manage external training WAN nodes (e.g., MPE, JTEN, GSC-Network, CFBLNet, MREEDS, etc.) and connect them to MTC training networks. The Contractor shall assist the Government with submitting external network support

requests for exercises and events.

C.3.6.6. Strategic and Operational Networks. The Contractor shall provide support for strategic and operational networks (including classified and unclassified networks) used to support training events, exercises, and activities. These functions include, but are not limited to, network cable installation and recovery, cable management, hard drive imaging, and identification of faulty equipment, network connectivity troubleshooting up to but not including accessing, configuring, and troubleshooting strategic network devices controlled by the supporting Network Enterprise Center (NEC).

C.3.6.7. System Administration (SA). The Contractor shall perform SA system and security functions for training event and exercise end-user items associated with simulation systems, Government mandated IS infrastructure systems and services, C2IS, and/or exercise IS devices. The SA functions include, but are not limited to workstation, communication, servers, switches, and printing services connected to unclassified and classified U.S. and/or Partner Nation simulation and training network enclaves.

C.3.6.7.1. Log Management for Network and Systems Architecture. The Contractor shall audit operating system and security events IAW NIST SP 800-92, NIST SP 800-53, and MTC Audit & Accountability policy. On a weekly basis (non-exercise), and daily during exercises, the Contractor shall monitor, review, and safeguard from deletion/destruction system and network generated log files. On a per occurrence basis, the Contractor shall report errors, misconfigurations, critical faults, and event alerts on all auditing mechanism failures within two (2) hours of discovery via email and Government-provided documentation to the MTC CIO/S6, Information System Security Manager (ISSM), and all associate ISSO Cybersecurity Officers.

C.3.6.7.2. Patch Management. The Contractor shall continuously manage, monitor and as applicable ensure IAVA compliance for MTC networks and systems. The Contractor shall configure systems and network architecture operating systems, hardware, firmware, and installed applications with the latest updates and security patches, for simulation and C2IS components and networks, IAW NIST SP 800-40, Information Assurance Vulnerability Management (IAVM) Program, and DoDI 8500.1.

C.3.6.7.3. User Account Management. The Contractor shall configure and manage user accounts IAW NIST SP 800-53A, DoDI 8520.02, DoDI 8500.1, and AR 25-2. On a continuous basis, the Contractor shall maintain 100% compliance regarding configuring systems and network device user accounts. The Contractor shall adhere to MTC account management policies, applying the “least privilege” principal to privileged account holders and prohibit the use of shared or group accounts except when the Government directs in emergency or other approved condition. The Contractor is responsible for implementation/configuration of Access Control (AC) methodologies that meet Government Public Key Infrastructure (PKI) requirements.

C.3.6.7.4. STIG Configuration and Implementation. The Contractor shall perform implementation of DISA STIG configurations for network and systems architecture on a continuous basis. The Contractor shall configure and apply current and future STIGs for system or network architecture (operating systems), printers, applications IAW DISA Information Assurance Support Environment (IASSE) STIG guidance for each applicable technology device/type within 48 hours of issuance and completion to the ISSM. The Government may direct a delay in implementing specific STIG based on exercise requirements.

C.3.6.8. Encryption System Management. The Contractor shall engineer, operate, maintain, protect, and defend Government provided communications encryption systems IAW with applicable DoD, Army, Army Command, and MTC policies. The Contractor should be prepared to handle cryptographic materials (e.g., cryptographic keys or certificates) to ensure the proper safeguarding of network data.

C.3.6.8.1. The Contractor shall pick up, handle, transport, install, inventory, store, and, at the direction of the COR, dispose of destroy Communications Security (COMSEC) equipment, devices, and keying material IAW all DA and National Security Agency (NSA) procedures and regulations, as required.

C.3.6.8.2. The Contractor shall properly secure, store, account for, and dispose of any classified hardware, software, printed materials, or other forms of data storage media used or produced by the contracted activity.

C.3.6.9. Tactical Radio Network Systems.

C.3.6.9.1. Replicated Tactical Radio Systems (RTRS). The Contractor shall operate RTRS (e.g., RWIS or similar Government provided systems) that replicates tactical communications in simulated TOC environments or unit training. The Contractor shall integrate RTRS and future replicated tactical radio systems with live tactical radio systems as directed by the Government. The Contractor shall replicate the entire tactical radio network for an event or exercise as directed by the Government.

C.3.6.9.2. Tactical Radio Management. The Contractor shall manage, maintain and integrate Government-provided tactical radio capabilities (i.e., SINCGARS, Harris RF-7800 or other High-Capacity Line of Sight (HCLOS) capable system) into unit tactical communications networks as part of distributed training events.

C.3.6.10. Network Configuration Management. The Contractor shall maintain executable or reloadable software media in an operable condition. Patches shall be installed IAW Government approved baseline, technical manuals, and DCWF roles and NEC guidance, and requirements contained in this TO. The Contractor shall duplicate master media obtained from the Government and shall distribute and install approved software block update media in accordance with Government instructions.

C.3.6.11. Day-to-Day Technical Support. The Contractor shall assist with day-to-day onsite technical assistance and customer support for daily administrative only operations in support of the MTC Information Management Officers (IMO). Daily Operations are those functions inherent to MTC permanent party in conducting administrative tasks and not for the conducting of training events. The Contractor shall assist the Government in providing the first line of communication and response to the NIPR and SIPR Networks end user on issues ranging from network connectivity to desktop support.

C.3.6.11.1. Customer Support. The Contractor shall assist with onsite technical assistance and customer support for daily system administrative operations in support of the MTC Information Management Officer (IMO). The contractor shall assist the IMO in providing the first line of communication and response to the NIPR and SIPR Networks end user on issues ranging from network connectivity to desktop support. Daily Operations are those functions inherent to MTC permanent party in conducting administrative tasks.

C.3.6.11.2. Ticket Management. Coordinate Network Enterprise Center (NEC) support through the Information Technology Service Management (ITSM) system when required. Submit and track, on behalf of customers, the status of IT requirements and Change Requests (CRQ), incident tickets, and requirement documents.

C.3.6.11.3. Imaging. The Contractor shall provide NIPR and SIPR imaging capability using the most current Secure Host Baseline (SHB) build.

C.3.6.11.4. IAVM & STIG Configuration and Implementation. The Contractor shall configure computers and printers on a continuous basis. The Contractor shall perform implementation of DISA STIGs and IAVA for NIPR/SIPR end-user systems, and printers. The Contractor shall report IAVM and STIG compliance to the ISSM as directed by the Government.

C.3.6.11.5. VTC Support. The Contractor shall provide technical support and operate MTC NIPR/SIPR VTC and TEAMS VTC suites at all sites, as the Government directs. The Contractor shall set up VTC equipment, establish connections to remote sites, and operate the VTC. The Contractor shall provide troubleshooting, maintenance, and coordinate repair services for VTC and conference room systems, with the hardware maintenance provider to resolve any equipment issues or malfunctions.

C.3.7. Information Management (IM).

C.3.7.1. Information Management Support. The Contractor shall IAW the MTC Government KM POC, organize, implement, and maintain MTC-wide Information

Management systems, (e.g. A365/SharePoint organizational one drives, MS Teams), and MTC websites. The Government will use this system to develop and maintain processes, tools, and technologies focused on exploiting the knowledge assets to achieve mission-critical objectives.

C.3.7.2. Assistance to MTC Workforce. The Contractor shall conduct A365/SharePoint training as required, ensuring that the MTC staff, both Government and Contractor, is current on how to best utilize the MTC Information Management Systems.

C.3.7.3. Information Management (IM) SOP. The Contractor shall, ICW the Government KM POC, review and maintain the MTC Portal/ Army365/SharePoint SOP outlining policies, procedures, and best practices.

C.3.7.4. Portal/Websites Creation. The Contractor, with Government approval, shall create portal sites that provide capabilities overviews, exercise development products and tips, scheduling, contact information lists, and any other information the Government deems necessary. This includes web parts or other design development meant to improve MTC processes and procedures. The Contractor shall provide the ability to manipulate stored data and inputs to provide outputs of specific information.

C.3.7.4.1. Unclassified MTC Portal/Website. The unclassified portal (Army365/SharePoint) is the primary location for maintaining and archiving MTC historical (Event, Calendar, Usage, previous exercise documents) data. The Contractor shall maintain the MTC portal and website which is accessible via the NIPRNET, is CAC protected, and searchable via standard internet search engines. The portal shall meet or exceed DoD policies and regulations, and Local NEC policies.

C.3.7.4.2. MTC Classified Portal/Website. The Contractor shall organize, maintain, and administer the MTC Army365/portal/website, accessible to classified users via the SIPRNET. The portal shall meet or exceed DoD policies and regulations, and local NEC policies.

C.3.7.4.3. Portal Access. MTC Army365/portal/website use identification and authentication processes to grant access to approved Government and MTC contract personnel. The Contractor shall review the existing processes and report on the status of the MTC portals/websites current authorized groups, roles, users, and permissions to the Government KM POC.

C.3.7.4.4. Portal Issues. The Contractor shall immediately report portal/website deficiencies, outages, or unavailability to the Government KM representative. The Contractor shall provide information on the issue, and daily updates until the issues are resolved.

C.3.7.5. Manage Information Storage. The Contractor shall conduct content management on the MTC Share Point portal/website, ICW with MTC local

Government KM POC. The Contractor shall ensure current and future data and processes are accessible to the Government via the portal/website. The Contractor shall provide Army365/portal/website locations for upload of videos, documents, and other content IAW DoD, NEC(s), U.S. Army, and local policies and regulations. The Contractor shall notify the Government KM POC of impacts to storage capabilities by storage limitations for the Government to develop and implement a solution.

C.3.7.6. Exercise/Event Technical Historical Data Sets (HDS). The Contractor shall maintain the exercise/event technical HDS for inclusion into the overall exercise HDS. HDS generally include, but are not limited to scenario documents, order of battle database, terrain database, parametric database changes, orders, and FRAGOs. HDSs shall be stored in a readily accessible manner and available upon Government request. Example products may include LVC-G databases, simulation databases and related scenario files, technical log, TIRs, log files, database reference material, MSEL, MSEL tool database backups, orders, and FRAGOs.

C.3.8. Training Environment Integration.

C.3.8.1. Systems Integration Support. The Contractor shall provide a training environment that allows staffs to exercise staff drills in an integrated, system-of-systems environment. The Contractor shall provide planning, performance configuration, testing, and support to integrate current, and future MC and simulation systems and capabilities (e.g. Synthetic Training Environment (STE) fielded to the MTC. Systems will interact appropriately across live, virtual, and constructive domains to create a realistic blended training environment replicating a complex OE in support of exercises/events. During an exercise/event, all simulation interfaces shall be operational and accurate with the exercise scenario. The Contractor shall perform configuration, integration, and interoperability of simulation systems.

C.3.8.2. C2IS Stimulation. The Contractor shall participate in and document results of simulation to C2IS integration and regression testing. Integration and testing include database creation, system administration, addressing, validation at the end client, and full operational testing. The Contractor shall provide results documentation to the Government as directed in the event or exercise planning documents.

C.3.8.3. System of Systems (SoS) Integration Support. The Contractor shall provide support to facilitate the integration of current and future battlefield systems, including Command and Control Information Systems (C2IS) platforms, into the MTC's System of Systems (SoS) training architecture. The Contractor shall, when directed, enable the Government to assess, validate, and test system interoperability in a dynamic training environment. Contractor responsibilities are limited to providing the necessary on-site technical expertise and configuring the simulation-side of the interface to support Government-led test and evaluation events. The Government remains the sole agent responsible for the development, configuration, and sustainment of its Command and Control (C2) and other battlefield systems.

C.3.8.4. Simulation Modernization and Evolution Support. The Contractor shall provide technical and functional subject matter expertise to support Government-led efforts in the testing, assessment, and evolution of constructive simulation systems and their associated technologies. The purpose of this support is to leverage the Contractor's on-site operational expertise to assist Government proponents and materiel developers. Support activities may be directed via Task Order to include, but are not limited to, environment preparation for technical tests, functional user support during evaluation events, and assistance with Government-led data collection. This task does not include software development or modification; all software builds, patches, and baseline changes will be provided by the Government.

C.3.9. Constructive Simulation Support.

C.3.9.1. Constructive Simulation Support. The Contractor shall operate Government provided simulations (e.g., NGC, JLCCTC, and JLVC). The Contractor shall operate and maintain any future and emerging simulations technologies fielded by the Government. The Contractor shall provide constructive simulations planning, set up, configuration, testing, execution, and recovery support. The Contractor shall provide a dedicated simulations technical planner(s) for Government directed exercises and events, who shall actively participate in all planning events with representation in government-designated planning syndicates and provide input to the products developed during the planning events. The Contractor shall confirm, with the Government, the proper positioning/location of forces in the simulation to support the start exercise conditions.

C.3.9.2. Administer Constructive Federation Environment and Model Servers. The Contractor shall configure, setup, technically secure according to applicable guidelines (e.g., DISA STIGs), and maintain constructive federation environments and models (e.g., NGC, JLCCTC, JLVC) within the simulation architecture. Constructive federations and models shall be prepared to support an exercise/event IAW the established Government directives and policies.

C.3.9.3. Constructive Model Database Creation. The Contractor shall provide database creation, maintenance, configuration management, and archiving for current and future constructive simulation simulations. The Contractor shall configure databases that accurately reflect scenario task organizations and concepts of support to meet unit-training objectives. The Contractor shall create functional validation checklists used to test and validate correct functionality of databases and conduct database validation tests prior to event or exercise execution IAW exercise planning timelines. Databases shall be produced and delivered IAW the delivery timelines as the Government directs during the planning process.

C.3.9.4. Constructive Client Training. The Contractor shall provide operator training and over the shoulder training support for all MTC constructive simulation clients. The training will be IAW a Contractor-developed, Government-approved

Program of Instruction (POI). At the end of this training, students shall be able to operate clients in a manner that supports the unit's training objectives.

C.3.9.5. Operate Constructive Simulation Client. As the Government directs, the Contractor shall operate simulation clients to provide input into simulation models.

C.3.9.6. Event Test Support. The Contractor shall provide functional (simulation client operations) support and feedback during event testing. The Contractor shall develop and conduct functional test cases and vignettes in support of event tests utilizing approved Government tools. The Contractor shall provide necessary functional expertise to accomplish the end state of the specified event or test IAW the Government-provided delivery schedule and timeline. The Contractor shall run the event test, track outcomes and problems, and provide documented results of the test.

C.3.10. Intelligence Simulation Support. The Contractor shall configure, set up, maintain, and operate current and future intelligence simulation models and systems.

C.3.10.1. Intelligence Simulation Planning, Configuration, and Execution.

C.3.10.1.1. The Contractor shall provide intelligence simulations planning, configuration, testing and execution support for the Intelligence Electronic Warfare Tactical Proficiency Trainer (IEWTPT), Intelligence Low Overhead Driver (ILOD), Warfighter's Simulation (WARSIM) Intelligence Module (WIM), Air and Space Collaborative Environment – Information Operations Suite (ACE-IOS), and other Intelligence simulation systems as directed by the Government. The Contractor shall prepare intelligence simulations IAW the exercise planning documents and timelines.

C.3.10.1.2. The Contractor shall support planning and shall provide input to exercise design and technical planning products. The Contractor shall execute the tasks required to replicate various intelligence functions in support of exercises.

C.3.10.1.3 The Contractor shall provide intelligence warfighting functional area training for Intel individuals, sections, staffs and Training Unit Commanders. The Contractor shall assist the training unit in developing specific training objectives supported by the fielded intelligence simulations.

C.3.10.2. Operate Intelligence Simulation Client. The Contractor shall operate intelligence simulation clients to provide input into simulation models in support of the execution of the intelligence collection plan in coordination with the EXCON and the training audience.

C.3.10.3. Intelligence Simulation Integration. The Contractor shall provide planning, perform configuration, testing, and support to integrate current and future intelligence simulation systems and capabilities. During an exercise/event, all intelligence interfaces shall be operational and accurate with the exercise scenario.

C.3.10.4. Intelligence Simulation Operation. The Contractor shall perform configuration, setup, maintenance, and operation and employment of government provided intelligence simulation systems (e.g., IEWTPT, WIM, and ACE-IOS) in support of exercises or training events IAW the exercise planning documents and timelines. The Contractor shall support the execution of the intelligence collection plan in coordination with the exercise control group and the training audience. The Contractor shall collect data for interim and post exercise analysis and record check points at specified intervals to serve as exercise backup and historical documentation.

C.3.11. Virtual Simulations / Games for Training (GFT) Support

C.3.11.1. Virtual Training Systems. The Contractor shall provide system Network/System administration-management, maintain currency & security for virtual training systems and software, setup, and operate and employ virtual training systems (e.g., RVCT and SVCT) in support of individual and collective training, and unit certification training.

C.3.11.2. Games for Training (GFT). The Contractor shall provide game-based training that is doctrinally correct, and operationally relevant to the user. GFT shall be prepared to support exercises and events IAW the established Government directives and policies. The Contractor shall support current and future gaming simulations.

C.3.11.2.1. GFT Platform Setup. The Contractor shall configure and prepare gaming platforms to support an exercise/event. The Contractor shall provide setup functions in the supported exercise/event location for gaming platforms to include but not limited to network cable installation, cable management, hard drive imaging, security administration, software troubleshooting, identification of faulty equipment, network connectivity troubleshooting. The Contractor shall prepare Gaming platforms to support an exercise/event IAW the established Government directives.

C.3.11.2.2. Administer GFT Platform Environment. The Contractor shall provide GFT system Network/System administration-management and maintain currency and security of Government Gaming systems software. The Contractor shall configure, set up, technically secure according to applicable guidelines (e.g., STIGs), and maintain GFT environments and models (e.g., VBS4 and VDCT) within the simulation architecture.

C.3.11.2.3. GFT Integration. The Contractor shall provide integration with Virtual Devices to meet with Unit commander training objectives and collective task accomplishment. The Contractor shall provide the expertise to enable training event integration of virtual devices designated by the Government.

C.3.11.2.4. GFT Over-The-Shoulder Support. The Contractor shall provide flexible over-the-shoulder training support for client operators to assist them with successfully

using gaming equipment during the execution of a training event. This support shall enable client operators to use the equipment in a manner that supports the unit's training objectives.

C.3.11.2.5. Train Client Operators. The Contractor shall provide flexible and current training to gaming operators in support of exercises. The training shall be conducted IAW a Contractor-developed, Government-approved POI. At the end of this training, gaming operators shall be able to operate gaming clients to meet the training unit's training requirement.

C.3.11.2.6. Operate Gaming Host. The Contractor shall configure and operate the Government-provided gaming host prior to each training session. The Contractor shall ensure training equipment is ready to meet the training audience needs. There shall be no training failures due to Contractor configuration and operation of the gaming host.

C.3.11.2.7. Control Other Entities in the Operational Environment. The Contractor shall exercise control over lateral BLUFOR, OPFOR, Civilian, and Game Logic entities within a game-based software application scenario. The Contractor shall perform virtual role-playing duties within the game-based software application environment. Contractor role-playing shall support the unit identified training objectives.

C.3.11.2.8. Database Support to GFT. The Contractor shall provide database creation, maintenance, and archiving for current and future GFT models.

C.3.11.2.9. Object Manipulation. The Contractor shall perform game-based software application object manipulation. Contractor object manipulation shall support the training audience scenario generation.

C.3.11.3. GFT/Virtual Training Systems Scenario Development. The Contractor shall provide scenario creation, development, maintenance, and management for game-based software application scenarios. These scenarios shall meet the unit identified training objectives.

C.3.11.4. GFT/Virtual Training Systems Test and Evaluate. The Contractor shall test and evaluate new models, terrain data, scripts, and additional components of stand-alone, client, administrative and host/server. The Government will provide the required software and hardware. The Contractor shall report to the Government discrepancies found during testing and usage of game-based software applications within one working day.

C.3.12. Command and Control Information Systems (C2IS).

C.3.12.1. C2IS Support to Training. The Contractor shall provide C2IS support for MTC supported training, training events, and exercises. The Contractor shall provide

Unit Operator sustainment training (Digital/C2 systems) on systems specified by the Government. The Contractor shall operate C2IS that are the inject points for tactical messages within the simulation to stimulation architecture. The Contractor shall operate MC servers to replicate a higher headquarters MC server capability to support the training audience in the absence of the higher headquarters C2IS shall be prepared to support an exercise/event IAW the established Government directive.

C.3.12.1.2. C2IS Administration. The Contractor shall provide installation, operation, preventive maintenance, and systems administration of Army and Joint C2IS.

C.3.12.1.1. C2IS Interfaces. The Contractor shall maintain communication interfaces with established C2IS to provide C5ISR services for training and exercises.

C.3.12.1.4. Lightweight Data Interchange Format (LDIF). Contractor shall maintain the MC LDIF for MTC role sets to support unit individual and collective training. The Contractor shall develop and maintain IP address space (LDIF) to enable higher command level structures to support EAB and BDE and below integrated training. The Contractor shall coordinate with Government to ensure LDIF is current and available to support unit training.

C.3.12.1.5. AFATDS Database. The Contractor shall assist the training audience in the creation of AFATDS databases for use during exercises and events. This includes but is not limited to creation of an initial AFATDS database for the unit to review, assisting in the troubleshooting of a database submitted by the training audience, testing the viability of the final database, and conducting end-to-end testing to ensure the interface between AFATDS and the simulation is functioning properly prior to every training event /exercise.

C.3.12.1.6. C2IS Integration. The Contractor shall manage, maintain, and integrate Government provided C2IS capabilities into unit tactical communications networks as part of training events and exercises. The Contractor shall conduct C2IS end to end engineering (C2 to C2) to ensure systems can connect and communicate.

C.3.12.1.6.1. C2IS Setup. The Contractor shall setup, connect, configure, and integrate C2IS into training events as required by the Government. The Contractor shall ensure C2IS are updated and configured to support the integration of C2IS into an event. As required by the Government, the Contractor shall operate C2IS on closed or local area networks, and/or strategic (SIPR, NIPR and other networks) specified by the Government).

C.3.12.2. Operate C2IS. The Contractor shall operate C2IS that are the inject points for tactical messages within the exercise or training event stimulation architecture. The Contractor shall operate C2IS servers to replicate a higher headquarters Mission Command capability to support the training audience in the absence of the higher

headquarters. This includes both operator and administrative-level functions. C2IS shall be prepared to support an exercise/event IAW the established Government directives.

C.3.12.2.1. Over-The-Shoulder Support. The Contractor shall provide operator level C2IS expertise and over-the-shoulder support and integration training for Staff C2IS, C2IS/products, and tactical communications equipment and the CP networks to response cells during exercise preparation and execution.

C.3.12.3. Individual Training Support (C2IS Training). The Contractor shall provide individual instruction on C2IS as provided in individual TO. The Contractor shall provide Unit Operator initial and sustainment training (Digital/C2 systems) on C2IS.

3.12.3.1. Programs of Instruction (POI). The Contractor shall maintain, revise, and adapt TRADOC and Program Manager (PM) developed POI for individual Army C2IS training. POI includes databases and other material that supports execution of the individual training task. The Contractor shall be responsible for ensuring POI are updated and maintain currency IAW published and emerging doctrine and standards. The Contractor shall create new courses or revise existing courses IAW results of training analysis, fielding of new systems, or at the direction of the Government.

3.12.3.4. Learning Assessment. The Contractor shall test students to evaluate their learning progress and to evaluate effectiveness of instruction. The Contractor shall provide a learning assessment report to the COR and on-site Government Lead.

C.3.13. Geospatial Management.

C.3.13.1. Geospatial Products. The Contractor shall create, generate, and provide digital terrain that encompasses the development and analysis of topographic and imagery products in support of training and operational missions. The Contractor shall prepare Constructive, virtual/gaming, and C2IS terrain to support an exercise/event IAW the established Government delivery schedule and design requirements.

C.3.13.2. 3D Geospatial Models. The Contractor shall modify or create 3D models for constructive and gaming simulation requirements. 3D models shall be prepared to support an exercise/event IAW the established Government delivery schedule and design requirements.

C.3.13.3. Emerging Geospatial Generation Technologies. The Contractor shall test and evaluate emerging terrain technologies to include providing the Government with recommendations. The Contractor shall deliver evaluation reports IAW with the established Government delivery schedule.

C.3.13.4. Geospatial Generation System and Security Administration. The Contractor shall setup, configure, operate, and manage current and future terrain

generation hardware and software. The Contractor shall support the delivery schedule by direction and agreement from the Government. Terrain generation hardware and software shall be prepared to support the Government directive.

C.3.14. Logistics Support to Training

C.3.14.1. Logistics Support to Training. The Contractor shall provide logistical support for training, exercises and events. Logistics support includes planning, implementing, and controlling the receipt, storage, and distribution of equipment to meet individual TO requirements. The Government will request logistical support from the Contractor (warehouse support and equipment movement and setup) using the exercise support plan and confirmed during JELC events, and scheduled Mission Synchronization meetings.

C.3.14.2. Material Support to Training. The Contractor shall submit lists of supplies and equipment for Government approval/purchase that are required to execute the mission, assist in the ordering process, and properly account for and store items upon receipt, including physical disposition of materials and supplies.

C.3.15. Event Set-up and Recovery. The Contractor shall prepare, execute, and manage pre-exercise setup and post-exercise recovery and reset of all facilities, workstations, work areas, TOC Pads, and training areas back to their original configurations. The Contractor shall report maintenance issues to the Government to ensure timely repair.

C.4. LOGISTICAL SUPPORT.

C.4.1. Government Provided Items and Services.

C.4.1.1. Government Provided Facilities. The Government will provide Contractor personnel performing work at the Government sites with appropriate office facilities.

C.4.1.2. Facilities Support. The Contractor shall assist the Government in maintaining facilities. The Contractor shall adhere to all established Government SOPs.

C.4.1.3. Property Management. The Contractor shall assist the Government in maintaining standard operating procedures for property accountability. The Contractor shall participate in and assist the Government with all inventories, to ensure tracking property down to the user level. The Contractor shall make available equipment for Government periodic inventories as required (normally sensitive items monthly and 25% of property quarterly). Inventories will be completed monthly per PBO guidance.

C.4.1.3.1. Property Control. The Contractor shall perform logistics inventories and

related logistics functions IAW AR 710-2 and other Army logistics and accountability regulations, policies, and guidance. The Contractor shall abide by the government regulations governing the use, handling, tracking the inventory and accountability of property. The Contractor shall account for property IAW AR 710-2-1 and at a minimum, account for 10% percent of the property per month IAW Installation Property Book Officer (IPBO) guidance.

C.4.1.3.2. Asset Tracking System. The Contractor shall populate and maintain the Government provided electronic equipment and assets tracking database to assist the Government with resourcing and acquisition decisions. This database will track but not be limited to MTC fielded equipment, Command procured equipment, admin equipment, equipment RMF status, availability, warranties, life cycle, equipment status, and current location.

C.4.1.4. Equipment. The Government will provide the Contractor with incidental property to perform tasks under a TO. The Government will provide all computer hardware and peripherals required to execute exercises and events are executed.

C.4.1.4.1. Equipment Storage Management. The Contractor shall perform Equipment storage management. The Contractor shall be responsible for the accountability and security of property held in storage IAW AR 710-2 and AR 735-5. The Contractor shall receive, offload, and inventory shipments from delivery companies.

C.4.1.4.2. Safeguarding Equipment. The Contractor shall be responsible for safeguarding all Government property provided for Contractor use. The Contractor shall properly secure, store, account for, and dispose of any classified hardware, software, printed materials, or other forms of data storage media used or produced by the contracted activity.

C.4.1.5. Office Communications and Automation. The Government will provide access to standard office-related Equipment/Information/Software (e.g., computers, desk space, network access, CAC, CAC readers (NIPRNET, SIPRNET, VOSIP phone, VOIP, and office supplies, and networked printer capabilities) while working in Government spaces for the conduct of performance.

C.4.1.6. Materials. The Government will provide essential day-to-day consumable operating supplies required for the preparation and conduct of training exercises (e.g., paper, pens, staplers, staples, tape, paper clips, computer discs, printer paper, and general office materials) required for the performance of a TO.

C.4.1.7. Use of Vehicles.

C.4.1.7.1. Use of Government Vehicles. The Government will provide the Contractor with Government motor vehicles to promote efficiency in conducting

Government business. The Contractor shall operate Government vehicles in accordance with the Federal Acquisition Regulation (FAR), GSA Fleet procedures, and MTC TMP SOP. The Contractor employees operating Government vehicles shall have a valid driver's license.

C.4.1.7.2. Use of Rental Vehicles. For specific mission and requirement, the use of a rental vehicle by the Contractor may be advantageous to the Government. When authorized to use a rental vehicle by the COR, the Contractor shall follow the FAR and JTR.

C.4.1.7.3. Material Handling Equipment (MHE). The Contractor shall operate MHE in support of daily logistics operations as directed by the Government. The Contractor shall obtain a non-government driver's license, up to 10 tons, to operate various types of MHE (forklifts and Gators) to lift, stack, and store material of standard and nonstandard sizes and dimensions.

C.4.1.8. Services. Not applicable

C.4.2. Contractor Furnished Items and Responsibilities.

C.4.2.1. Facility Clearance. See ATTACHMENT 3 - DD 254.

C.4.2.2. Contractor Purchases. The Contractor shall acquire materials as required and directed by the Government. All purchases shall comply with section XXXX of this MATOC Contract.

C.5. RESERVED

C.6. DEFINITIONS AND ACRONYMS

C.6.1. Definitions. (See ATTACHMENT X –DEFINITIONS)

C.6.2. Acronyms. (See ATTACHMENT X –ACRONYMS)
