

Quality Assurance Surveillance Plan (QASP) Matrix

Task	Sub Task	Performance Standard	Quality Standard for Rating 1	Quality Standard for Rating 2	Quality Standard for Rating 3	Method of Monitoring
Noxious Weed Survey and Treatment (all methods)	Daily Treatment Record and Electronic Data Collection and submission	All areas within the defined area are surveyed. Weeds will be treated within all legal specifications, as defined by the product label (dosage, environmental, etc.) Contractor is responsible for non-target effects (discuss with COR on case by case basis). Treatment Records meet defined requirements Electronic data meets requirements as stated in Performance Work Statement and/or task order.	All areas within defined project area are surveyed 90% or better effective treatment on targeted plants (within each treatment area). 20% or less loss of non-target species. All Treatment Records complete, accurate, and submitted within specified time period. All electronic data meets 90% accuracy or greater and is submitted within specified time period.	Deficiencies in performance are found during inspections or other contractual obligations are not met. Less than 90% but greater than 80% treatment efficacy - rework at contractors expense. Quality Standards are achieved after rework - positive performance rating and full payment. Failure to meet Quality Standards (less than 90% efficacy but more than 80%) after second inspection - 20% reduction in payment (reduction will apply to treatment areas on a case by case basis if task order contains multiple treatment areas). Failure to submit treatment records and/or electronic data by specified time, inaccurate treatment records, or less than 90% complete electronic data - 10% reduction in payment for applicable treatment areas.	Unacceptable quality of tasks and deliverables. The services provided are not in compliance with contract terms and conditions and do not meet Quality Standards for rating 1 or 2. Negative performance rating will be assigned and no payment will be made if less than 80% of Quality Standard. Failure to provide any treatment records and/or electronic data for treatment areas within a task order - no payment will be made.	Weekly review of Quality Control Plan documents by COR. Periodic, onsite inspections during performance period by Inspector(s) and or COR. Final inspection for treatment efficacy and non-target kill will be determined by ocular estimate at least 14 days after completion. Performed by Inspector(s) and/or COR. Monitoring plots will be utilized if Quality Rating 2 or 3 are suspected. Office review of Treatment Records and Electronic Data by COR.
