1.0 Background

NASA Armstrong Flight Research Center (AFRC) operates T-34C aircraft. These aircraft were previously military aircraft. These aircraft do not have a ejection system and require a manual bailout system.

Please make the period of performance through April 2031, as this will be an ongoing process.

2.0 Objectives

The goal is to provide equipment to assure safe and reliable operation of escape and emergency systems to the National Aeronautics and Space Administration (NASA), Armstrong Flight Research Center, Edwards, CA.

3.0 Requirements

Butler Parachute will provide high altitude seat-style parachutes for use in NASA AFRC aircraft in accordance with all applicable laws.

4.0 Deliverables

Butler Parachute will provide the following:

- Inspection
- Packaging
- Verification
- Loading
- Shipment
- Copies of any documents as required showing acceptance of items

5.0 Period of Performance

The period of performance is 5 years. The agreement will be reviewed to update and support funding documents as well as service requirements as required.

6.0 Travel

Not applicable

7.0 Other Special Requirements and Considerations

To be determined individually for each piece of equipment.
