Louisville District Military Design Guide (LDMDG)
Air Force Reserve Command Handbook (AFRCH) 32-1001 – 2021
Air Force Manual (AFMAN) 32-1084 Facility Requirements Standards - 2018

Guidelines

Installation Development and Design, March Air Reserve Base Installation Facility Standards - 2021
Department of Defense Unified Facilities Criteria (UFC)

Interior Standards

IEA International Ergonomic Association Table of Ergonomic Standards ISO TC 159
Architecture Barriers Act - ABA Standard for Department of Defense Facilities – 2015
ANSI/BIFMA Safety and Performance Standards for Furniture

1.2 General Description

The purpose of this project is to renovate some existing spaces and to add a new BOT Bay and Classroom for the Flight Simulator program. The building includes a BOT Bay, Briefing Rooms, Offices, a Classroom, and some Storage and Computer Room spaces for a cohesive mission.

The objective for the interior design is to promote an appropriate professional image and still be responsive to the maintenance environment in materials and design elements. The facility shall be attractive and safe, while responsive to the end user's needs and functions.

1.3 Furniture, Fixtures & Equipment - FFE

The criteria for the FFE benefits both the facility requirements and user needs from a facility management and health perspective. The facility requires furnishings that respond to the physical demands of constant utilization within a maintenance environment. To achieve the requirements for the facility, the furnishings must be durable, easy to maintain, have limited parts and pieces to manage and have universal modularity. The furniture selected uses the FuT and Hanger projects as Basis of Design to create cohesiveness throughout the facilities.

Of equal importance to the function of the furnishings is the ergonomic support and features that support a healthy work environment for the users. The furnishings size and adjustability features will accommodate a minimum of 95% of the facility population size. Other healthy and ergonomic furniture features include:

- Task lighting with glare reduction adjustability and well-lit task areas to avoid eye strain.
- Seating for all users with easily adjustable mechanisms for height, arms, and back; breathable fabric for comfort, and seat pan front edges that will not cut off circulation while seated.
- Selected furnishings from manufacturers that utilize green manufacturing processes and produce products that are Green Guard Certified with recycled content materials. When possible, furnishings will be provided that achieve the "Cradle to Cradle" environmental status to reduce future landfill use.

1.3.1 Sustainability

FF&E will comply with federal sustainability requirements including low-emitting materials for indoor air quality, and products with a lesser or reduced effect on human health and the environment over their life cycle.

1.4 Interior Furnishings Styles & Types

The furniture style for the facility shall be a transitional style with design lines that reflect modern aircraft and simple forms that function efficiently. Hierarchies of office furnishings have been implemented through finishes and trim detailing. Furnishings and interior architecture in the maintenance spaces will be minimal and will prioritize durability and functionality.

1.5 Space Planning & Furnishings Standards

The interior square footage of useable space was allocated based on the Air Force Reserve Command Handbook (AFRCH) 32-1001 and AFMAN 32-1084, and needs and functions were confirmed through end-user interviews. Work space standards and interior space plans were designed to provide staff coordination and integration amongst teams and support the functions within the individual areas of the facility.

The furnishings standards for the Flight Simulator building were developed and are illustrated in the FFE Package. They are summarized in the following table.

1.5.1 Space/Furniture Standards Assignment

Square Footage:	Furniture Standard/Style:	Assignment:
Desks (Not all are listed):		
48 SF Desk	D1: 6' x 8' L-Shape Freestanding Desk, Transitional Style Laminate and Metal	Private Offices
Workstations:		
36 SF Workstation	WS1: 6' x 6' L-Shape Workstation with Low and High Panels, Transitional Style Laminate and Metal	Shared Offices
36 SF Workstation	WS2: 30" x 4' Workstation with Panel, Transitional Style Laminate and Metal	Shared Offices
30 SF Workstation	WS5: 2' x 6' Straight Workstation, Transitional Style Laminate and Metal	Shared Offices

In addition to the personal workspaces, the facility will provide common shared areas with appropriate furnishings to support the activities in the building as follows:

- Briefing Rooms – Conference table and seating, markerboards, and waste / recycling receptacles.
- Classroom-Training tables and seating, markerboard, waste / recycling receptacles.
- Storage/Support – Metal shelving, files, storage cabinets, and ESD workbenches (GFGI) with task stools.

1.6 Furnishings Description

The criterion for the interior furnishings (FFE) includes providing product types and layouts that are designed for the maximum space efficiency to accommodate teaming and solitary work efforts. The furnishings are value oriented with ergonomic attributes, integrated technology, modular construction and finishes proven in longevity.

Furnishings to be provided include: laminate and metal desks with returns and overhead storage; panel-based workstations with laminate worksurfaces and metal storage; task and guest seating; file and shelf storage; conference/collaboration tables and seating; café style tables and chairs; waste and recycling receptacles; markerboards and tackboards.

Equipment (GFGI) to be provided includes: metal tool storage; refrigerators/freezers; microwaves; coffee makers; workbenches; copiers / printers; shredders; overhead projectors; and flat panel displays.

Desk and workstation furniture will have a modular construction with integrated technology to accommodate data and electrical requirements. Copier/printers (GFGI) and shredders (GFGI) will be located where needed. Overhead storage in the desks and workstations will provide easy access to daily reference materials, as well as provide task lighting onto the work surface to avoid eye strain. Panel heights between workstations will allow for collaboration and light filtration. In addition, private offices will have support furniture of guest seating and markerboards.

The briefing rooms will have integrated technology for power and data hook ups, with flat panel displays (GFGI), and markerboards. The briefing rooms shall have a laminate table in a transitional style. All table seating in these rooms shall have casters, state of the art ergonomic properties and scaled to the size and use of the room.
