

Request for Information (RFI): Army Modernization Protection (AMP) Supply Chain Intelligence Prototype

Title

Army Modernization Protection (AMP): Prototype for Actionable Supply Chain Intelligence and Supplier Monitoring

This RFI is for information and planning purposes only and does not constitute a solicitation or a promise to issue a solicitation in the future. Responses to this RFI are not offers and cannot be accepted by the Government to form a binding contract. The Government will not pay for any information or administrative costs incurred in response to this RFI.

Description / Statement of Need

The U.S. Army's modernization and acquisition programs face increasing risks from global supply chain vulnerabilities and a rapidly evolving cyber threat landscape. Adversaries exploit these weaknesses, introduce foreign influence, and use open-source and dark web channels to compromise suppliers, undermining program security, readiness, and operational advantage.

Currently, Army acquisition leaders lack:

- Real-time, actionable insights into supply chain risks from open-source and commercial intelligence.
- Integrated tools for continuous supplier monitoring, threat detection, and risk analysis at an unclassified level.
- Predictive analytics to enable proactive, not just reactive, risk management.
- A secure, collaborative environment for testing and fielding next-generation supply chain intelligence capabilities.

Critical Need:

The Army seeks information from industry regarding a prototype system that can:

- Aggregate and analyze threat intelligence from diverse sources, including traditional, social, and dark web domains.
- Apply advanced AI and analytics to detect supply chain vulnerabilities, foreign influence, and emerging threats.

- Deliver timely, relevant reporting and dashboards to Army acquisition and cybersecurity leaders to inform risk-based decisions.
- Support secure communication, collaboration, and data transfer with trusted industry partners and Army infrastructure.

Objectives

- Modernize supply chain security approach.
- Reduce program risk.
- Maintain technological and operational superiority.

Key Capabilities Sought

- Real-time alerts and reporting.
- Dark web monitoring.
- Supply chain risk management.
- Security posture grading.
- Predictive analytics for proactive risk management.
- Secure, collaborative environment for data sharing.

Questions for Industry

1. What existing solutions or prototypes address the above requirements?
2. How do your tools aggregate and analyze threat intelligence from open-source, social, and dark web domains?
3. What AI and analytics capabilities do you offer for supply chain risk detection and predictive analysis?
4. How do you ensure secure communication and collaboration with Army and industry partners?
5. What are your approaches to integrating multiple commercial threat intelligence vendors?
6. What is your experience with delivering real-time, actionable supply chain intelligence to government or defense customers?
7. What is the estimated timeline and budget for a one-year pilot deployment?

Instructions for Response

- Please provide a capability statement addressing the questions above.
- Include relevant past performance, technical approach, and any available product literature.
- Responses should be unclassified and submitted in PDF format.
- Please include your company name, point of contact, and NAICS code.

Point of Contacts

Submit responses via email to the below POC no later than May 13 ,2026.
