

Technical Scenario 1:

SUBJECT: TROUBLESHOOTING LICENSING ISSUES

EVENT: A new license file was received and installed correctly according the vendor instructions, however Multiple user of Siemens NX 3D software are unable to use the software simultaneously. There are more than enough licenses available on the license server but only a single user is able to use the software and all other users were blocked, receiving the message “Licensed number of users already reached.”

Responses to this event should include the following information:

- (a) Team - Identify the contractor team members that need to participate in the effort; and if applicable, describe the teaming arrangements, roles, and responsibilities of any subcontractors, partners, and/or Joint Venture team members required to perform the work.
- (b) Assumptions - Detail all assumptions relative to any interpretations made of the sample task and your technical approach to ensure full understanding of your response by the Government.
- (c) Technical Approach - Provide a detailed description of the technical approach including a step-by-step procedure and methodology which would be used in accomplishing the task. Included in the technical approach should be areas that will need to be investigated, and information identified to perform the work.

Technical Scenario 2:

SUBJECT: TROUBLESHOOTING CFD/STAR-CCM+ SIMULATION ISSUES

EVENT: A user is having issue with a Star-CCM+ simulation that they are working on. The simulation is a hypersonic vehicle experiencing external flow over the airframe but the simulation continues to crash without obtaining a valid solution. The user reaches out to the vendor for support in order to get the simulation to work.

Responses to this event should include the following information:

- (a) Team - Identify the contractor team members that need to participate in the effort; and if applicable, describe the teaming arrangements, roles, and responsibilities of any subcontractors, partners, and/or Joint Venture team members required to perform the work.
- (b) Assumptions - Detail all assumptions relative to any interpretations made of the sample task and your technical approach to ensure full understanding of your response by the Government.
- (c) Technical Approach - Provide a detailed description of the technical approach including a step-by-step procedure and methodology which would be used in accomplishing the task. Included in the technical approach should be areas that will need to be investigated, and information identified to perform the work.
